Acknowledgments

Numerous people and institutions have made this book possible, and I would like to express my gratitude to all of them.

To begin with, my work has received generous funding from the German Research Council (DFG), project #453412235.

It was Raija Kramer who first got me interested in the topic of phasal polarity. At the English department at FSU Jena I encountered a welcoming and supportive working environment. Many an insight came from discussions at our research colloquium, and from long conversations with Volker Gast. I am indebted to the anonymous peer reviewers for Language Science Press, as well as to Caroline de Becker, Eva Schultze-Berndt, Itamar Francez, Jens G. Fischer, Martin Haspelmath, Rozenne Guérois, Maj-Britt Hansen, Stefan Savić, Thera Crane, Tom Bossuyt, Volker Gast, and Yael Greenberg for feedback on earlier drafts of different parts of this book. I also wish to thank the community proofreaders for fixing my non-native English and Sebastian Nordhoff for help with typesetting.

Last, but far from least, this book would have been impossible without the support of the countless people who endured my endless, surely bizarre questions, shared unpublished data with me, helped with transliteration and tricky glosses, or provided references that were hard to come by. These are (in alphabetical order of their given names):

Alena Witzlack-Makarevich, Andrey Nefedov, Antoine Guillaume, Bruno Olsson, Christian Döhler, Cindy Boyer, Dan Ke, Drungdrung a Tjakivusung, Elia Weber, Eline Visser, Elizabeth Zeitoun, Eva Schultze-Berndt, Jim Boyer, Felicity Meakins, Gerd Jandraschek, Gertrud Schneider-Blum, Gilles Polian, Guillaume Jacques, Harald Hammerström, Heinrich Werner, Helma Pasch, Irina Nikolaeva, Itamar Francez, Jack Martin, James Essegbe, Jens G. Fischer, John Elliot, John McLaughlin, Jurica Polančec, Katharina Haude, Claudia Dombrowsky-Hahn, Kristian Roncero, Lalo a tahesh kaybabaw, Maj-Britt Hansen, Marian Klamer, Marijana Kresić Vukosav, Maude Devos, Michel Launey, Miriam van Staden, Onelisa Slater, Peter Barclay, Petrus Mabena, Philomena Dol, Phumelele Lovisa, Ponsiano Kanijo, Rachid Ridouane, Rasmus Bernander, Sérgio Meira, Stefan Dienst, Stefan Georg, Stefan Savić,

1 Introduction

I'm not a real movie star. I've *still*
got the same wife I started out
with twenty-eight years ago.

(Will Rogers)

1.1 Introductory remarks

It is a well-known fact that linguistic expressions, especially ones pertaining to the realm of grammar, are often polyfunctional. That is to say, they are characterized by a cluster of meanings that are conceptually related, but which, at the same time, can be differentiated from one another on the basis of structural and/or meaning-based criteria. Examining the cross-linguistic patterns of these different uses and functions allows insights into the question of how human language organizes meaning (e.g. Evans 2010).

A semanto-pragmatic domain that tends to be characterized by a high degree of polyfunctionality is that of PHASAL POLARITY, an umbrella term coined by van Baar 1997 for the notions of STILL, ALREADY, NOT YET, and NO LONGER, as well as for the expressions denoting them (throughout this book, I represent the abstract phasal polarity concepts in small caps). Not only does phasal polarity lie at the intersection of polarity and aspectuality in the broadest sense, but the functions of individual expressions frequently extend into a wide array of other linguistic domains. In this book, which is aimed at semanticists, typological researchers and descriptive grammarians alike, I survey the polyfunctionality patterns of linguistic items whose meaning includes the concept of STILL in a sample of the world's languages. To give just a little preview of such functional extensions, consider the excerpt in (1), which features German *noch* in three distinct uses.

(1) German

- a. *Alle inländischen wohlmeinenden Anträge hat sie ausgeschlagen, noch neulich musste ich den gescheiten und tüchtigen Melchior Böhni heimschicken,*

'She has refused all well-meaning offers by domestic businesses, just

1 Introduction

the other day she made me send home the clever and capable Melchior Böhni,’

- b. *der noch große Geschäfte machen wird*,
'who will eventually run a very successful enterprise.'
- c. *und sie hat ihn noch schrecklich verhöhnt, weil er nur ein rötliches Backenbärtchen trägt und aus einem silbernen Döschen schnupft!*
'And she also dreadfully mocked him, because of his little red beard and because he sniffs his tobacco from a little silver box!'
(Keller, *Kleider machen Leute*)

In (1a) *noch* serves as a scalar focus particle that combines with the temporal adverb *neulich* 'the other day' and relates its denotation to alternative, earlier times. The same function is found, for instance, with French *encore* in (2). In (1b), on the other hand, *noch* itself has a function akin to that of a temporal adverb, signalling that some development is on its way that will culminate in the type of event described by *große Geschäfte machen* 'run a very successful enterprise'. One expression that has the same function is *ɓà* in the Mbunic language Mundang of Cameroon and Chad; see (3).

(2) French

Encore hier, j'-ai vu le film
still yesterday 1SG-have.1SG see.PTCP ART.DEF:SG.M movie(M)
La Chute....
Downfall
'Just yesterday, I watched the movie *Downfall*...'
(found online, glosses added)

(3) Mundang

?à f̥ōō ɓà.
SUBJ.3:IPFV think.POT still
'Il pensera un jour. [He will think one day]' (Elders2000)

Lastly, in (1c) *noch* depicts the act of mocking as an additional event that forms part of the same overarching scene. An expression that shares this function with *noch* is *təmna* in the Samoyedic language Tundra Nenets, as shown in (4).

(4) Tundra Nenets

N'e'ka-n'i s'it^o n'ada-wa-h t'ax^omna mən^o
elder_brother-GEN.1SG 2SG.ACC help-IPFV.NMLZ-GEN beside 1SG

1.2 Goals and limitations

<i>təmna tədə-mt^o</i>	<i>ta^o-dəm-c^o</i>
still	reindeer-FUT.POSS:ACC:2SG
'In addition to my brother helping you, I also gave you a reindeer.'	
(Nikolaeva2014)	

With many of the expressions I discuss in this book, such cross-linguistically recurring functions are paired with more idiosyncratic ones. For instance, in (5) Spanish *todavía* signals that the situation described in the preceding complement clause falls within socially acceptable limits. While this use may appear quirky at first sight, in Section 3.2 I discuss how all steps leading from **STILL** to 'within acceptable limits' remain visible in the present-day language.

(5) Spanish

<i>Que un gran artista ten-ga</i>	<i>eso-s</i>	<i>humo-s</i>	<i>todavía</i>	<i>pero</i>
COMP a great artist	have-SBJV:3SG	DEM.M-PL fume(M)-PL	still	but
<i>él es un</i>		<i>simple aprendiz.</i>		
3SG.M COP.3SG ART.INDEF:SG.M		simple apprentice(M)		
'A great artist having such an attitude, that would be acceptable , but he's just an apprentice.' (Bosque2016, glosses added)				

The remainder of this introductory chapter is structured as follows: in Section 1.2 I lay out the goals and limitations of this book in more detail. In Section 1.3 I briefly address previous research on **STILL** expressions. In Section 1.4 I provide my definition of the subject matter. Afterwards, in Section 1.5, I discuss the processes of data collection and analyses. This is followed by a summary of some theoretical preliminaries in Section 1.6. Lastly, Section 1.7 is an overview of the structure of the present volume.

1.2 Goals and limitations

The main aim of this book is to survey and explain the different functions that expressions for the concept of **STILL** have, based on a sample of the world's languages. I thereby hope to establish a stepping stone for future cross-linguistically minded research on the matter, and to equip descriptive grammarians with a reference work that can hopefully guide them through disentangling some of the intricate patterns of use they may encounter in their languages of study. In order to achieve these goals, I opted for a comparatively small sample of 76 languages, paired with a high-resolution approach that takes into account as broad an array of data sources as feasible within the bounds of a research project (Section 1.5).

1 Introduction

To increase transparency and to encourage follow-up works, this book features an extensive set of appendices in the form of commented data sheets for each language and each marker included in the sample (see Section 1.7.2 for discussion). Against this backdrop, the more specific questions that I address throughout Chapters 2 to 4 are as follows:

- (i) Which functions, especially recurrent ones, can be found?
- (ii) What motivates the coexpression of a given function and **STILL**?
- (iii) How do these functions relate to one another?
- (iv) Do certain functions correlate with a specific morphosyntactic status?
- (v) Are there any observable areal patterns?

To briefly elaborate on these questions, (i) entails the problem of how to draw the line between two functions or uses, which is a point I discuss in Section 1.6.1. As implied in (ii), I take a usage-based approach to linguistic variation, aiming to understand “why it is at least possible and at best natural that this particular form–meaning correspondence should exist in a given language” (Goldberg2006). I return to this matter in Section 1.6.2. The question of motivation, in turn, is directly tied to (iii), the issue of how different functions of a single item relate to each other. Building on the approach taken in semantic map studies (e.g. GeorgakopulosPolis2008; Haspelmath2003), I looked not only for semantic similarities, but also for implicational relationships. To give a fairly straightforward example, consider Spanish *todavía* as a pro-predicate in (5), repeated below.

- (5) Spanish

Que un gran artista ten-ga eso-s humo-s, todavía, pero
 COMP a great artist have-SBJV:3SG DEM.M-PL fume(M)-PL still but
él es un simple aprendiz.
 3SG.M COP.3SG ART.INDEF:SG.M simple apprentice(M)

‘A great artist having such an attitude, **that would be acceptable**, but he’s just an apprentice.’ (Bosque2016, glosses added)

From both the meaning and patterns of usage of cases like (5), it becomes clear that this function is mediated by *todavía* as a marker of marginality ‘would still be in the realm of a given category’ plus the ellipsis of an evaluative predicate (Bosque2016; Deloor2012). This is also in line with the fact that the only other marker in the sample that has a comparable function, Serbian-Bosnian-Croatian *još*, likewise has the marginality function. Where feasible, I also tested predictions about implicational relationships that are found in the literature, be it as explicit statements, or merely implied. For instance, in his ground-breaking

1.2 Goals and limitations

study on phasal polarity, **vanBaar1997** observes that **STILL** expressions in isolation are recurrently used in the function of their internally negated counterpart **NOT YET**. This is illustrated in the Tashelhyit (Afro-Asiatic > Berber) example (6). **vanBaar1997** then goes on to suggest the two-part universal in (7).

(6) Tashelhyit

T-šši-t yad lfḍur-nnek? – Sul.

2SG-eat.PFV-2SG already lunch-POSS.2SG still

‘Did you eat your lunch already? – Not yet.’ (Fanego2021)

(7) **vanBaar1997’s** (**vanBaar1997**) **STILL-as-NOT YET** universal

- a. If a **STILL** expression is used as an isolated expression, it is invariably used for the expression of **NOT YET**.
- b. Examples are only found in those languages which have an internal negation of the relevant **STILL** expression.

As I discuss in Section 2.3.1, neither of the components of (7) hold up against data from a larger sample.¹ Counterexamples to (7a) include English *still* and Modern Hebrew *lod* as concessive interjections. As for (7b), the relevant function is also found with expressions that do not combine with negation. These include *kya-* and *syá-* in the Bantu languages Ruuli and Bende (Abe2015; MolochievaEtAl2021) and *(y)edung* in the Timor-Alor-Pantar language Blagar (e.g. Steinhauer1995). The former signal **NOT YET** in combination with an infinitival complement, whereas in the Blagar case polarity is a function of the adverb’s position in the clause. What does, however, remain valid as an implicational universal is that the **NOT YET** use without negation is only found with items that are also involved in the expression of this negative concept in more saturated sentential environments. This use also serves as an illustration of the parameter of morphosyntactic status (iv): unsurprisingly, such holophrastic usages are primarily attested with free morphemes and bound roots, such as Tashelhyit *sul* or Blagar *(y)edung*. They, are however, also occasionally attested with prefixal markers, which then require a copula root to fill the lexical slot. This is the case, for instance, with Bende *syá-* and its Ruuli cognate *kya-*. Lastly, to give an example of areal patterns (v), in Section 3.4.2 I discuss the lexical coexpression of **STILL** and an exclusive function ‘only’. Judging from my sample, this type of polysemy is widespread in Australia and Papunesia, but rare to non-existent elsewhere in the world.

Having laid out the questions guiding this study, I now turn to some of its limitations. First and foremost, the survey I develop in Chapters 2 and 3 is confined by bibliographical bias and the overall availability of data. Secondly, this

¹For more extensive discussion, see **PersohnNotYet**, on which Section 2.3.1 is based.

1 Introduction

book is intended as a conversation starter, rather than aiming to be the proverbial last word on the subject matter. As such, it inevitably leaves many loose ends open, which will hopefully be picked up in future research. In addition, and as I have only implied up to this point, I do not aim to postulate abstract *Gesamtbedeutungen* intended to cover all uses of a given expression. What is more, while my initial aim was to model the attested polyfunctionality with semantic maps, it quickly became apparent that such an approach is severely constrained by the often fragmentary data. In addition, and due to the broad array of attested functions, it would ultimately only lead to a crowded and tightly interconnected, hence uninformative, map. I instead opted to keep some of the key tenets of semantic maps, such as its approach to differentiating between individual uses (Section 1.6.1) and the search for implicational relationships. Where deemed helpful, I address and illustrate partial networks of a given semantic field and/or of a specific expression.

1.3 Previous research

The functional extensions of **STILL** expressions, or of phasal polarity in general, have received little attention from cross-linguistic scholarship. Thus, many typological works explicitly exclude additional functions, or only address them as side notes (e.g. [vanderAuwera1998](#); [vanBaar1997](#); [VeselinovEtAl](#)). While many insightful and detailed descriptions of specific markers and systems exist, they are normally limited to individual languages. Such works include, among others, the descriptions of phasal polarity systems on the African continent found in [Kramer2021a](#), [Bosque2016](#) on Spanish *todavía*, [Huang2007](#) on *nahan* in the Austronesian language Saisiyat, [MosegaardHansen2002](#) ([MosegaardHansen2002](#), [MosegaardHansen2008](#)) on several French expressions, [Kockelman2020](#) on Kekchí Maya *toj*, and [Shetter1966](#) on German *noch*. Another group of works, informed by different theoretical traditions, aims to establish abstract core meanings of individual items. Such approaches include [Beck2020](#) on German *noch*, [Greenberg2012](#) on Modern Hebrew *fod*, [McConvell1983](#) on *=rni* in the Pama-Nyungan language Gurindji, and [JingSchmidtGries2009](#) on several Mandarin Chinese markers, including the **STILL** expression *hái*. Those existing cross-linguistic studies that do address the wider functional scope of **STILL** expressions tend to focus on a small subset of uses and are typically highly constrained in geographic and/or genealogical coverage. For instance, [vanBaar1991](#) and [SchultzeBerndt2002](#) observe the recurrent coexpression of **STILL** and exclusive meanings in Australia and Papunesia (Section 3.4.2) and [Gueldemann1998](#) and [VeselinovaDevos2021](#) discuss a few additional functions of so-called “persistives” in Bantu.

1.4 *Definition of the subject matter*

To the best of my knowledge, the two major exceptions to these general tendencies are *Zhang2017* and *Panova2021*; the latter only became available at a late stage of preparing this monograph. *Zhang2017* is primarily concerned with expressions of repetition, but his sample includes several **STILL** expressions. *Panova2021* contains many important insights, but her discussion of polyfunctionality is mostly based on what is found in the descriptive sections of grammars, as opposed to the higher-resolution approach taken in the present work (Section 1.5). What is more, both studies are based on a broader definition of the subject matter, which does not include a prospective component. This definition is the topic of Section 1.4.

1.4 Definition of the subject matter

Throughout this book, I understand a linguistic item to be a **STILL** expression if and only if it conforms to the definition in (8).² This definition, which purposely takes as framework-neutral a stance as possible, is derived from a survey of previous studies on phasal polarity, to which I return shortly. Note that the definition consists of two components, with the formal component relying on the functional one.

(8) Definition of a **STILL** expression

a. Functional component:

The concept of **STILL** signifies the persistence of an affirmative-polarity situation at topic time. At the same time, it construes the situation's subsequent discontinuation as a valid alternative scenario.

b. Formal component:

A **STILL** expression is a linguistic form that signals the concept of **STILL**.

In what follows, I offer additional discussion of both components of my definition and then address the question of its practical application. Afterwards, I briefly turn to the issue of more than one **STILL** expression in a single language.

1.4.1 The functional component: discussion

It seems appropriate to begin the discussion of the definition in (8) with its functional core. This, in turn, can be broken down into three components: persistence, polarity and prospection.

²I hasten to point out that a strict functional delimitation does not run counter the goal of examining polyfunctionality – instead, it is necessary to define the criteria for inclusion of a given expression, to then examine which additional functions it exhibits.

1 Introduction

1.4.1.1 Persistence

It is safe to say that my understanding of **STILL** as a signal of persistence is fairly uncontroversial. More precisely, most authors agree that the relevant expressions trigger an existential presupposition that the situation depicted in the clause obtained during an interval that precedes and abuts the time under discussion.³ This existential presupposition constitutes a shared characteristics with additive focus quantifiers (Section 1.6.4), which is a point that proves to be of relevance in several recurrent functional extensions (Sections 2.4.4, 2.4.5.2 and 3.3.1). The notion of persistence is furthermore intrinsically linked to the domain of aspect in the broadest sense. In the dimension of aspectual operators, expressions for **STILL** naturally combine with viewpoints that are fully contained within a situation, such as imperfectives and resultatives, as opposed to perfectives and anteriors. Concerning the actional dimension of aspect, **STILL** is only compatible with situations types that involve some extended state or process (vanBaar1997; Dahl1985; Kratzer2000; Loebner1989; NedjalkovJaxontov1988; among others). These (in)compatibilities constitute a recurring theme throughout Chapters 2 and 3.

1.4.1.2 Affirmative polarity

My definition restricts the notion of persistence to affirmative polarity. It is well-known that **STILL** items frequently combine with negation to yield expressions for the two negative phasal polarity concepts **NOT YET** and **NO LONGER** (e.g. vanderAuwera1998; vanBaar1997; Loebner1989). If negation falls within the scope of the **STILL** expression (“inner negation”) this yields **NOT YET**.⁴ Examples include German *noch nicht* or Spanish *todavía/aún no*, both ‘still NEG’. Negation taking scope over the **STILL** expression (“outer negation”), on the other hand, yields **NO LONGER**, as is the case, for instance, with *oc* in the Uto-Aztecan language Classical Nahuatl and with *sa-/se-* in the Bantu language Xhosa. In the appendices I follow vanBaar1997’s (vanBaar1997) terminology and speak of the parameter of “polarity sensitivity”. Crucially, the inclusion of affirmative polarity in my definition allows me to exclude items that form part of expressions for the negative concepts **NOT YET** or **NO LONGER**, but which do not serve as independent **STILL** expressions. A prime example of the latter is English *yet*. Originally a

³See Abraham1980, vanderAuwera1998, Doherty1973, Horn1970, Ippolito2004, Koenig1977, Loebner1989, Mittwoch1993, Morrissey1973, Muller1975, among others.

⁴I use the terms “inner” and “outer” negation solely in reference to scope. This may or may not be reflected in surface syntax.

1.4 Definition of the subject matter

STILL expression, and continuing to share many functional extensions with such items, in the present-day language it meets my definition only in a handful of relic cases, such as in *It is early yet* (KoenigTraugott1982).

1.4.1.3 An alternative course of events

The third ingredient to my functional definition, the invocation of an alternative discontinuation scenario, requires some more explanation. To begin with, it has repeatedly been observed that items like English *still* and its counterparts in other languages do not combine well with situations that are inalterable under normal circumstances.⁵ Thus, examples like (9–11) are decisively odd.⁶

(9) German

? *Elisabeth ist noch groß.*

Elisabeth COP.3SG still tall.

‘Elisabeth is still tall.’ (Doherty1973)

(10) English

? *Uncle Harry is still dead.* (Michaelis1993)

(11) French

? *Le Pape est encore célibataire.*

ART.DEF:SG.M pope(M) COP.3SG still unmarried

‘The pope is still unmarried.’ (MosegaardHansen2008)

Instances like these suggest that the concept of STILL not only involves continuation relative to a prior time span, but also the possibility of discontinuation at an interval following the time under discussion. This subsequent termination is, however, not entailed, as it can be cancelled without contradiction; see (12).

(12) German

König Konstantin leb-t noch i-m Exil und das

king Constantine live-3SG still in-ART.DEF:DAT.SG.N exile(N) and that

wird wohl auch so bleib-en.

FUT.AUX:3SG apparently also thus remain-INF

‘King Constantine is still living in exile and that is the way it will always be.’ (Koenig1977; glosses added)

⁵This observation is found in CranePersohn2021, Donazzan2008, Doherty1973, MosegaardHansen2008, Jenny2001, Kockelman2020, Michaelis1993, NedjalkovJaxontov1988, RAEGramatica, Weber1989, and many other works.

⁶Example (9) is acceptable in a marginality reading ‘counts as comparatively tall’ (Section 3.2).

1 Introduction

Given that the subsequent discontinuation is defeasible, many researchers relegate it to a derived inference (Abraham1980; Klein2018; Koenig1977; Muller1975, among others) and explain the oddity of cases like (9–11) by assuming that it is pointless to overtly describe a situation as persistent if it cannot change anyway. Authors such as vanderAuwera1993 (vanderAuwera1991BeyondDuality, vanderAuwera1993, vanderAuwera1998), vanBaar1997, Michaelis1993, or Vandeweghe1992 take a different stance. In their view, the concept of STILL intrinsically involves a perspective on time that is “retrospectively continuative and prospectively geared towards possible change” (vanderAuwera1998) and where this change “figures in the discourse, and/or in the mind of the Speaker, of the Addressee, or both, as a serious alternative of the factual situation described in the sentence” (vanBaar1997). Approaching the issue from this angle, a speaker who utters *King Constantine is still living in exile* (12) not only signals that the monarch remains overseas. They also communicate that they have considered a possible course of events in which he has returned, or will return, from exile. As Vandeweghe1992 puts it, by using a phasal expression “the state-of-affairs ... is vested with a dynamism”.⁷ Given that the alternative development is not actually asserted, there is no contradiction in explicitly rejecting it. Note that this notion of an alternative course of event does not necessarily relate to hearer/speaker expectations; I return to this point in Section 1.4.1.4 below.

As I see it, there are several benefits to including the evocation of an alternative scenario in my definition. Firstly, it provides a communicative embedding for the concept of STILL. As a correlate, it allows for a straightforward functional explanation for the abnormality of examples like (9–11). Thus, it is strange to say *Uncle Harris is still dead* or *Elizabeth is still tall*, because scenarios in which the subject is *no longer* dead or tall are at odds with everyday experience. It is only in very specific discourse worlds that such statements make sense, for instance in the context of the 1989 Disney movie *Honey, I Shrunk the Kids*. In the same vein, a development in which the pope ceases to be single clashes with cultural expectations (MosegaardHansen2008). Secondly, making an alternative course-of-events part of my definition allows me to capture one of the otherwise hard-to-grasp differences between STILL expressions and continuative expressions of the type *continue Verb-ing*, Spanish *seguir* plus gerund, and the like. For instance, the Royal Spanish Academy’s comprehensive grammar makes the following observation:

Constructions with *todavía* ['still'] differ from those formed via “*seguir* ['continue'] + gerund” ... in that the former more clearly suggest that the de-

⁷In the original Dutch “de standen van zaken ... krijgen een plaats in een dynamiek”.

1.4 Definition of the subject matter

scribed situation may change in the near future ... The presence of *todavía* introduces a stronger expectation that the phase following the one described in the predicate can, or should, come into existence. (RAE*Gramatica*)⁸

Such a distinction is far from a peculiarity of the European context. For instance, in discussing two specific expressions in the Ubangian language Sango, NassensteinPasch2021 remark that “[u]nlike *de*, which has a clear prospective sense, *ngba* is purely continuative”. In a comparable fashion, Connell2013 states that *degeq* in Austronesian Mateq “implies the consistency of an action or state”, but does not involve a possible or expected change. What is more, by having an alternative scenario figure in my definition, I can exclude expressions for concepts that are only broadly related to STILL, such as items or phrases meaning ‘until now’ or ‘even now’.⁹ That said, the two key ingredients of my functional definition (persistence and an alternative course of events) need not be equally prominent in all relevant attestation. For instance, in (13a) it is Peter’s persistent location that is most salient. In (13b), on the other hand, the component of a subsequent change is given special salience, due to the fronted position of German *noch* (cf. Beck2020; Koenig1977, Koenig1991).

- (13) Context: Peter is expected to take a plane that leaves London at 4 pm.
 It is now 3 pm.
- a. English
 John: (Yes, *I know*). *Peter is still in London*. (vanBaar1997)
 - b. German
 Noch ist Peter in London.
 still is P. in L.
 ‘(As for now) Peter is still in London (e.g. if you want to talk to him, don’t wait any longer).’ (personal knowledge)

⁸In the original Spanish “Se diferencian las construcciones con *todavía* de las formadas con «*seguir* + gerundio» ... en que las primeras sugieren más claramente que las segundas que la situación descrita puede alterarse en un futuro próximo ... La presencia de *todavía* induce en mayor medida la expectativa de que la fase posterior a la designada por el predicado puede o debe obtenerse.”

⁹Expressions of this type can, however, constitute the diachronic precursor for STILL expressions (vanderAuwera1998; vanBaar1997). For instance, German *noch* goes back to a root ‘now’ plus a suffix ‘also’ (DWDS) and Spanish *aún* has its origins in Latin *ad huc* ‘until here, until now’ (vanderAuwera1998; RAEDictionary). Similarly, Wardaman (Yangmanic) *gayawun* can transparently be segmented into *gaya* ‘today, now’ and *-gun/-wun* ‘pertaining to’ (Merlan1994), with this original meaning having become bleached; see Appendix C.6.

1 Introduction

1.4.1.4 A note on expectations

Before turning to the formal side of my definition, a word on expectations is required. While I do define **STILL** with reference to an alternative course of events, my comparative concept purposely makes no reference to speaker/hearer expectations. With regard to the latter, two scenarios can be distinguished. In the first scenario, the persistence of the situation described is in line with speaker- and/or hearer expectations; **vanBaar1997** terms this the “neutral scenario”. Example (13a) above is such a case. In the second scenario the situation persists at an unexpectedly late point in time; this is illustrated in (14).

- (14) Context: In order to solve an urgent business matter, Peter was expected to take a flight departing London at 4 pm. It is now 6 pm and John is surprised to find out that Peter will only leave at 7 pm.

John: (*Damn!*) *Peter is still in London.* (**vanBaar1997**)

The unexpectedly late scenario is often described as evoking an alternative timeline in which events unfold according to expectations (**vanderAuwer1998**; **vanBaar1997**; **Michaelis1993**). That is, it can be understood as involving not only a contrast between two different courses of events, but also between two possible worlds that differ in their reality status. Accordingly, **vanBaar1997** speaks of the “simultaneously counterfactual” scenario. Figure 1.1 illustrates this interpretation for (14). Importantly, cross-linguistic research has shown that sensitivity to expectations is an axis of significant variation across **STILL** expressions. Recent discussion of this issue can be found in **vanderAuwer2021** and **Kramer2017** (**Kramer2017**, **Kramer2021b**). A single expression may be compatible with both scenarios, as is the case with English *still*. Alternatively, a language may make use one of the following strategies to specifically signal the unexpectedly late scenario (**vanBaar1997**):

- a dedicated expression, e.g. Classical Nahuatl *nozan*.
- combinations of **STILL** expressions, e.g. Georgian *zer + isev*, or *zer + k'idev*.
- the use of additional coding, as in German *immer noch* lit. ‘always still’.

In the appendices, I follow **Kramer2017** in coding the compatibility with one and/or the other scenario under the label of “pragmaticity”.

1.4.2 The formal component: discussion

Having discussed the functional component of my definition, I can briefly turn to its formal component, which is repeated below.

1.4 Definition of the subject matter

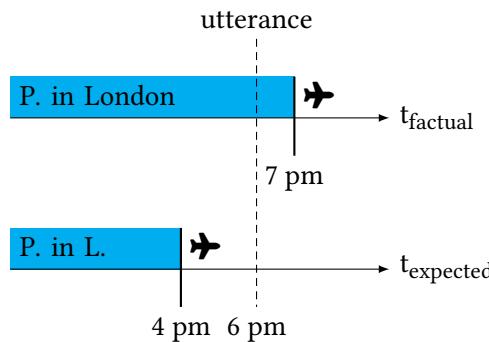

Figure 1.1: Graphic illustration of (14), based on vanBaar1997

(8b) Formal component:

A **STILL** expression is a linguistic form that signals the concept of **STILL**.

This formal part of my definition closely follows vanBaar1997, who defines phasal polarity expressions as “specific formal means of referring to the semantics of Phasal Polarity” (vanBaar1997). On a more fine-grained level, the definition purposely makes no reference to morphology or syntax. While in well-studied European languages the functional concept of **STILL** is typically expressed by independent small words (vanderAuwera1998), restricting the subject matter to this type of expression would severely impede cross-linguistic comparison; see Kramer2017 (Kramer2017, Kramer2021b) for recent discussions. To give just two examples, in the Bantu language Manda **STILL** is expressed by an auxiliary-like element (*a*)*kona*, as shown in (15). In the Sino-Tibetan language Northern Qiang, on the other hand, the concept is expressed by a prefix *tcV-* on the predicate; see (16). In my discussion of cross-linguistic variation, as well as in the appendices, I follow Kramer2017 in speaking of “wordhood” as a shorthand for an expression’s morphosyntactic status.

(15) Manda

 ‘S/he is still sleeping.’ (LaPollaHuang2003)

1 Introduction

1.4.3 Identifying still expressions

As I discuss in Section 1.5.1, I first and foremost chose the sample languages based on where I was able to identify, with reasonable confidence, expressions that i) conform to my definition, and ii) for which there were good indications of other functions. This raises the question of how I applied this definition, which seems the more relevant given the fact that I primarily rely on third-party data. In the most straightforward cases, I had access to dedicated studies on phasal polarity, such as [vanBaar1997](#), [vanderAuwera1998](#), [Vandeweghe1992](#) or the contributions in [Kramer2021a](#), whose definitions matched mine. To give an example, [NassensteinPasch2021](#) describe the Sango verb *de* as “meaning ‘continue to have some quality until quality changes’”. This is opposed to another Sango marker *ngba*, for which they remark that “[u]nlike *de*, which has a clear prospective sense, *ngba* is purely continuative” ([NassensteinPasch2021](#)). Thus, I included Sango *de*, but not *ngba* in my sample. Where no such studies were available, my point of departure were descriptive grammars and, to a lesser degree, dictionaries. In some cases, these materials openly addressed all elements of my definition. [Guillaume2008](#)’s ([Guillaume2008](#)) description of the Cavineña (Pano-Tacanan) marker *=jari* is such a case:

In past tense settings, *=jari* means that the state/event has begun before and was still holding at the story time but does not hold at the present time anymore ... In present tense setting, *=jari* means that the state/event has begun in the past and will still hold true in the future (although not forever). ([Guillaume2008](#))

In other cases, finding the relevant pieces of information required a bit more puzzle work. For instance, Trió (Cariban) *=nkérē* is listed by [Letschert1998](#) under the Portuguese lemma *ainda* ‘still’ and is termed a “persistive” by [Carlin2004](#). [Meira1999](#) states that *=nkérē* “is used to indicate continuation, coming quite close to the English ‘still’”. That this marker also evokes an alternative scenario becomes particularly evident in its behaviour with nominal predicates: in order for these to combine with persistive *=nkérē*, they must be augmented by a suffix *-me*. This suffix signals a manifest, but not intrinsic quality, typically a transient state ([Carlin2004](#)). What is more,

when the temporary state is seen from the point of view of an extended period rather than as a bounded unit, ... someone who has left that state but is talking about the period when that state existed, the [derived noun] is always followed by ... *nkérē* ‘still’. ([Carlin2004](#))

1.4 Definition of the subject matter

These pieces of information, when taken together, give evidence that Trió =nkërë conforms to my definition, in that it signals both persistence and evokes a discontinuation scenario. In yet other cases, the available examples, especially if they came with textual embedding, gave good indications as to whether or not certain markers glossed as ‘still’, ‘yet’, ‘persistive’ and the like were to be included in my sample. Thus, as **Loebner1989** points out, the alternative scenario evoked by **STILL** leads to prototypical usage patterns in which the two scenarios are implicitly or explicitly juxtaposed. Applied to a concrete case, consider (17) from the Bolivian isolate Movima.

(17) Movima

Context: recollecting a conversation between the narrator’s mother and grandfather.

N-asko dira pawanet-wa=’ne kaj siñlototo=’ne mere’.

OBL-PRO still hear-NMLZ=3F NEG deaf.NMLZ=3F big

‘That was when she [narrator’s mother] could still hear, she wasn’t very deaf then.’ (**MovimaCorpus**)

In (17), the item *di:ra(n)* serves, to all appearances, a dual purpose. On the one hand it links the mother’s existing sense of hearing to the same capacity at an earlier stage in her life; at the same time, it anticipates the onset of deafness that is also hinted at in the next clause. I have taken examples like (17) as an indication that Movima *di:ra(n)* conforms to my definition. In the appendices, I discuss the evidence for including a given expression in my sample under the list item “specialization”, following the term used by **vanBaar1997**.

1.4.4 Allolexy

Up to this point, I have spoken of the inclusion of a language or expression in my sample somewhat interchangeably. However, it is not uncommon for a single language to possess more than one expression that matches my definition, i.e. several allolexes. To mention just a few instances, Classical Nahuatl has *oc* and *nozan*, in Modern Hebrew one finds *sod* and *sadayin*, Spanish has *todavía* and *aún*, and the Bantu language Swahili has *bado* and *ngali*. In such cases, the different expressions may contrast with each other along several axes. For instance, in Swahili the Omani Arabic loan *bado* is much more frequent than the inherited *ngali*. In Classical Nahuatl, *nozan* is a dedicated expression for the unexpectedly late scenario of **STILL** (**vanBaar1997**). What is more, *nozan* appears to only have this function, whereas *oc* is widely polyfunctional. Functional range is also what

1 Introduction

distinguishes the two pairs of **STILL** expressions in Modern Hebrew and Spanish: in each case, both have multiple functions, several of which are unique to one member of the pair.

1.5 Data and analysis

1.5.1 The sample

The survey I develop in Chapters 2 and 3 is based on a world-wide convenience sample of 76 languages from 45 distinct phyla.¹⁰ Table 1.1 gives an overview of the number of languages and phyla for each of the six macro-areas; note that Austronesian and Afro-Asiatic are represented in two macro-areas each. The languages themselves are listed in Table 1.2 and their approximate locations are plotted onto a map in Figure 1.2.

Table 1.1: Geographic breakdown of sample

Macro-area	Languages	Phyla
Africa	19	7
Australia	7	6
Eurasia	16	9
North America	9	8
Papunesia	18	10
South America	7	7

I chose the sample languages primarily on the basis of the available resources that allowed me to confidently identify **STILL** expressions for which there were also good indications of additional functions. As phasal polarity is typically not given much attention in descriptive materials, my sample is heavily restricted by bibliographical bias. I nonetheless aimed for some degree of representativeness. As a very rough metric to this aim, I allotted each macro-area a share of the sample that approximates its relative contribution to the world's languages, based on the numbers in the appendix to **HammarstromDonohue2014**. That said, languages from Australia are overrepresented, as I opted to include more languages based on the existing literature on **STILL**—‘only’ coexpression (Section 3.4.2). I also

¹⁰Throughout this study, both genetic affiliations and macro-areas are based on glottolog (glottolog).

1.5 Data and analysis

kept an eye on genealogical variety and geographic spread within each macro-area. However, several of the larger and often better described phyla are represented with more than one language each; this is especially the case for Austronesian, Atlantic-Congo, and Indo-European.

Table 1.2: The sample languages

Africa	Afro-Asiatic: Tashelhyit, Tunisian Arabic; Austronesian: Plateau Malagasy; Atlantic-Congo: Adamawa Fulfulde, Bende, Chuwabu, Ewe, Manda, Mundang, Nyangbo, Ruuli, Sango, Southern Ndebele, Swahili, Xhosa; Central Sudanic: Kaba; Katla-Tima: Tima; Mande: Bambara; Nilotc: Barabaiiga-Gisamjanga Datooga
Australia	Bunaban: Gooniyandi; Gunwinyguan: Wubuy; Mirndi: Jaminjung-Ngaliwurru; Pama-Nyungan: Gurindji, Martuthunira; Tangkic: Kayardild; Yangmanic: Wardaman
Eurasia	Afro-Asiatic: Hebrew (Modern); Indo-European: English, French, German, Serbian-Croatian-Bosnian, Spanish; Nakh-Dagestanian: Lezgian; Sino-Tibetan: Japhug, Hills Karbi, Mandarin Chinese, Northern Qiang; Tai-Kadai: Thai; Tungusic: Udihe; Uralic: Tundra Nenets; Yeniseian: Ket; Yukaghir: Southern Yukaghir
North America	Athabaskan-Eyak-Tlingit: Slave; Eskimo-Aleut: Kalaallisut; Cochimi-Yuman: Maricopa; Mayan: Kekchí; Muskogean: Creek; Tsimshian: Gitxsan/Nisga'a; Siouan: Osage; Uto-Aztecán: Classical Nahuatl, Western Shoshoni
Papuasia	Anim: Coastal Marind; Austronesian: Acehnese, Chamorro, Lewotobi, Máteq, Paiwan, Rapanui, Saisiyat; Maybrat-Karon: Maybrat; Ndu: Iatmul; North Halmahera: Ternate-Tidore; Nuclear Torricelli: Bukiyp; Nuclear Trans New Guinea: Kewa, Ma Manda, Western Dani; Timor-Alor-Pantar: Blaggar; West Bomberai: Kalamang; Yam: Komnzo
South America	Arawan: Culina; Cariban: Trió; Isolate: Movima; Lengua-Mascoy: Southern Lengua; Pano-Tacanan: Cavineña; Quechuan: Huallaga-Huánuco Quechua; Macro-Je: Xavante

1.5.2 Data sources

In Section 1.4.3 I hinted at specialized studies, descriptive grammars, and dictionaries as my primary resource for identifying **STILL** expressions. For each sample expression I aimed to mine as many data sources as feasible, so that I could obtain a high-resolution picture. Given the state of documentation of the world's languages, the extent of available materials naturally varied greatly. For well-studied and wide-spread languages such as German, English, French or Spanish, I could rely on an abundance of papers and monographs pertinent to the subject

1 *Introduction*

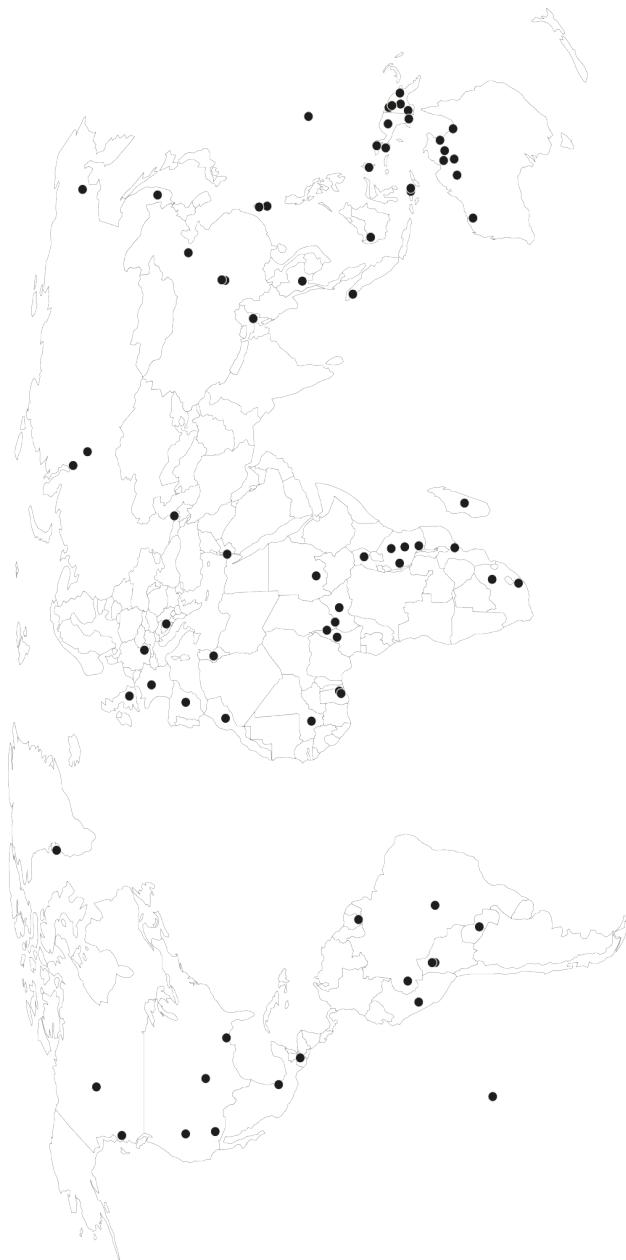

Figure 1.2: Map of the sample languages

1.5 Data and analysis

matter and even perform the occasional internet search for specific patterns of usage. For some less described languages, extensive corpora or text collections allowed me to gain many insights. This includes cases like Kalamang, Paiwan, Ruuli, and Movima, to name just a few. In yet other cases, I had to make do with whatever examples I could find in the descriptive materials. Where possible, I also consulted expert linguists, who provided invaluable help with hard-to-interpret examples and difficult glosses. In a few cases, where my contacts included native speaker linguists, I was also able to elicit additional data. An overview of the data sources used is given in each language appendix.

1.5.3 Data analysis

Given the exploratory nature of the present study, I opted for a low-tech and qualitative approach to data analysis. Once I had established a sufficiently large sample, I created preliminary tabulations of the distinct uses I could identify based on both formal and semantic-pragmatic criteria (Section 1.6.1). Subsequently, I performed several recursive cycles of analysis in which I compared the relevant attestations across expressions, while at the same time incorporating additional data sources, until a clearer picture of the sets of recurrent uses, their characteristics and the criteria distinguishing them from each other emerged. To give an illustration of this approach, several sample expressions form part of collocations that denote a near past event (Section 2.4.6.1). This is illustrated in (18) for Tunisian Arabic *māzāl*, here surfacing as *māzil*.

- (18) Tunisian Arabic

‘Ich hatte eben erst damit begonnen, auf dem Stück Fleisch herumzubeißen, da flog auch schon mein (Backen-)Zahn im hohen Bogen. [I had only just begun chewing on the piece of meat, when all of a sudden my molar tooth came flying out]’ (Singer1984, cited in FischerEtAlTunisian)

A comparison of the available contextualized data points across the relevant languages showed that they consistently form part of the discursive background

1 Introduction

and, as in (18), they recurrently involve a “past in the past”. From this I could conclude that the relevant constructions do not denote tense in the deictic sense of the term and that they involve a topic time that is fully contained in the situation’s post-time (see Section 1.6.3 on notions of tense and aspect). Both points, in turn, are consistent with the available descriptions of the verbal paradigms involved.

Once the set of distinct uses and their semanto-pragmatic characteristics were established, I moved on to looking for areal patterns and implicational relationships and to developing the functional explanations given throughout Chapters 2 and 4.

1.6 Theoretical preliminaries

Before moving on to an overview of the structure of this book, it is necessary to address a few basic assumptions that guide my survey, as well as to define some key terms and concepts. It is safe to say that my understanding of the vast majority of them is rather uncontroversial in the functionalist realm of the language sciences, which is why I keep the following discussions fairly short.

1.6.1 Polyfunctionality and the notion of “function” or “use”

Throughout this book, I assume that multifaceted linguistic items, like the **STILL** expressions investigated here, are best understood as forming clusters of distinct functions or uses, which are linked together by a network of family likeness (e.g. **Haspelmath1997**; **Janda2015**), as opposed to them having a single and highly abstract *Gesamtbedeutung*. With that in mind, the baseline for all questions that guide the present study is that of which distinct uses or functions can be identified in my sample (Section 1.2). This raises the issue of what I understand by the terms **USE** and **FUNCTION** in the first place and when to establish a plurality of them. In what follows, I address both of these points.

To begin with, throughout this book I use the terms *function* and *use* interchangeably. Following the approach used in classical semantic maps (see **GeorgakopulosPolis2003**; **Haspelmath2003** for overviews), I furthermore make use of these labels in a wide sense that, to a large degree, conflates the distinction between semanticized meanings and those that arise in specific constructional and/or pragmatic contexts. Also in line with the aforementioned approach, I take two uses or functions to be distinct if a pair of expressions differs with respect to them, be it within a single language or cross-linguistically. To give a fairly straightforward example,

1.6 Theoretical preliminaries

several sample expressions, including French *encore* and Classical Nahuatl *oc*, have an iterative use. In both cases, such an ‘again’ reading can be accompanied by an event quantifier ‘one time’, as illustrated in (19) for *oc*. In descriptive grammars, the addition of such an item is usually described as stressing the repetition reading and/or as making it explicit vis-à-vis other contextually available interpretations (e.g. BatchelorChebliSaadi2011; Launey1986). That is, iterative uses of *encore* and *oc* with or without an ‘one time’ element are described as mere variants of a single function.

- (19) Classical Nahuatl

Auh quēmman oc cē-ppa ti-tla-cuā-z?

and when still one-time SUBJ.2SG-OBJ.INDEF:NON.HUMAN-eat-PROSP

‘Y a qué hora has de comer otra vez? [And when will you eat again]?’

(Carochi1645, glosses added)

However, comparable collocations are also attested on the basis of expressions such as German *noch* in (20). Crucially, *noch* cannot signal repetition on its own. This by itself is a strong indicator that the repetition reading of ‘still one time’ phrases is, from a comparative point of view, not to be considered a mere variant of a more general iterative use. What is more, all relevant expressions in my sample have broadly additive uses which motivate the iterative reading with an event quantifier (‘still one time’ > ‘one more time’ > ‘again’). This interpretation, in turn, finds independent evidence in the existence of iterative collocations featuring other markers of additivity, such as English *once more* or Spanish *otra vez* lit. ‘another time’.

- (20) German

Opposition gewinn-t Wahl in Istanbul: İmamoğlu

opposition win-3SG election.ACC.SG in I. I.

macht-'s ***noch ein-mal.***

make.3SG-3SG.ACC.N still ART.INDEF-time

‘Opposition wins elections in Istanbul: İmamoğlu does it again’

(found online, glosses added)

That said, it is important to keep in mind that the distinct uses I discuss throughout this book are, first and foremost, comparative constructs in the form of landmarks in a continuous conceptual space. What is more, the fact that two expressions share a common use does not necessarily mean that they are entirely congruent in this respect. For instance, in Section 3.5.2.2 I discuss the use of STILL

1 Introduction

expressions as signals of a concessive relationship between two propositions, which is a globally widespread functional extension. Despite the shared common denominator of concessivity, the exact semanto-pragmatic import of the individual expressions differs considerably. To give just one example, though both English *still* and Spanish *todavía* can mark a clause as containing a concession, only the former is felicitous in the context of (21).

- (21) Context: Harry beats his dog.
- a. English
Still, he is a nice guy.
 - b. Spanish
Todavía es un buen tipo.
still COP.3SG ART.INDEF:SG.M good.M guy(M)
(EderlyCurco2016, glosses added)

1.6.2 Motivation and semasiological change

As I pointed out in Section 1.2, one of the questions that guide the present study is that of the MOTIVATION underlying the coexpression of a given function and the phasal polarity concept of STILL. With respect to this question, I take a usage-based approach, according to which

[m]otivation aims to explain why it is at least possible and at best natural that this particular form–meaning correspondence should exist in a given language. Motivation is distinct from prediction: recognizing the motivation for a construction does not entail that the construction *must* exist in that language or in any language. It simply explains why the construction “makes sense” or is natural ... Functional and historical generalizations count as explanations (Goldberg2006, emphasis in the original)

Functional generalizations include processes such as metonymy, whereas historical generalizations include attested usage patterns over time and established directions of functional change. With respect to the latter, I follow Traugott1989 and subsequent works (e.g. Traugott1999; TraugottDasher2002) in assuming that there are three overarching tendencies, which are mono-directional and bring about a shift in semiotic status.¹¹ These tendencies, summarized in Figure 1.3, are internalization, proceduralization, and change towards the expressive.

¹¹See Diewald2011 on functional change and semiotic status.

1.6 Theoretical preliminaries

A classic example for the first tendency is the internalization of a perceived external association of ‘crude person’ with ‘farmer’ to the core meaning of English *boor*. In the present study, this tendency manifests itself, for instance, in the marginality use of **STILL** expressions (Section 3.2). An illustration of the tendency for proceduralization is the development of English *while* to a temporal connective out of its original meaning ‘time span’. I discuss similar developments of **STILL** expressions in Section 2.5.3.1. As for the third and last tendency, the change towards the expressive, a textbook example is found in the extension from deontic modals to epistemic ones. Cases from the present study include the development of **STILL** expressions to markers of concessive consequent clauses, and from there to onward to concessive-expressive interjections (Section 3.5.2.3).

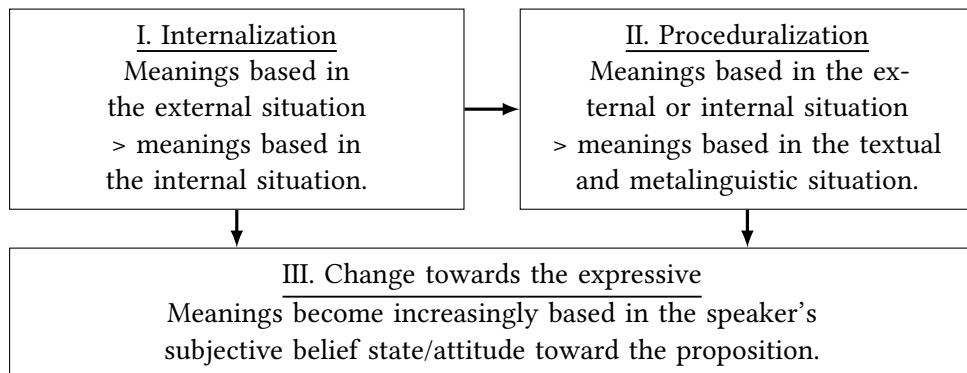

Figure 1.3: Tendencies of semantic change based on Traugott1989. Arrows depict possible feeding relationships.

As the preceding discussion implies, at various points in Chapters 2 and 3 I opt for a diachronic perspective, in that I try to trace back the diachronic constellations and processes that lead to individual expressions getting equipped with specific functions. Crucially, “if the internal semantic structure of a lexical category consists in clustered and overlapping readings”, as I assume them to be, “then meaning changes ... are likely to originate in several older meanings simultaneously” (MosegaardHansen2008). This point becomes relevant, for instance, in my discussion of the ‘as far removed as’ use of **STILL** expressions in Section 2.5.2.3.

1.6.3 All things temporal

When it comes to tense, aspect, and related notions, I mostly rely on the time-relational approach of Klein1994. The key to this framework lies in the assump-

1 Introduction

tion of three privileged time spans and a set of possible relationship between them. The three time spans are UTTERANCE TIME, SITUATION TIME and TOPIC TIME. With utterance time being a straightforward affair, situation time encompasses various types of actional content, whereas topic time is an elaboration of Reichenbach1947's (Reichenbach1947) *reference time* and represents "the time span to which the speaker's claim on this occasion is confined" (Klein1994). In what follows, I sketch out how temporal and aspectual meaning arises in this framework, and also briefly address the additional notion of temporal regions.

1.6.3.1 Tense and aspect

In Klein1994's framework, the function of TENSE lies in relating topic time to utterance time. With the present tense, utterance time is included in topic time, whereas in the past tense topic time precedes utterance time, and the other way around for the future tense. This is in contrast to ASPECTUAL OPERATORS which establish different kinds of relationships between topic time and situation time. Unless explicitly stated otherwise, I assume that aspectual operators have their "canonical" (Polancec2021) functions. Thus, with the IMPERFECTIVE viewpoint, the interval of topic time is fully contained within the time of the situation, whereas with the PERFECTIVE aspect it falls partially in the situation's post-time. Figure 1.4 is a graphic schematization of these two primary viewpoints. For a more hands-on example, consider (22), which features a verb in the Spanish past perfective inflection. By means of the past tense, topic time is narrowed down to one that precedes utterance time. The perfective aspect, on the other hand, establishes a topic time around the right edge of the 'eating an apple' situation, thus yielding a reading of closure.

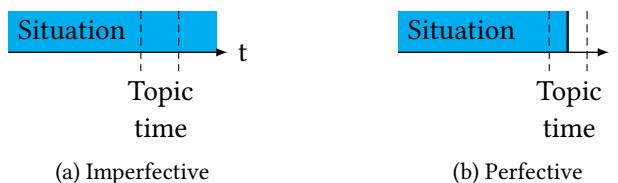

Figure 1.4: Major aspectual viewpoints, based on Klein1994.

- (22) Spanish

- María com-ió una manzana.*
 M. eat-PST.PFV.3SG ART.INDEF:SG.F apple(F)
 'Maria ate an apple.' (personal knowledge)

1.6 Theoretical preliminaries

A third type of viewpoint that is relevant to the present study is the ANTERIOR, also commonly referred to as the PERFECT. In Klein1994's understanding, this viewpoint denotes that topic time is fully contained in a situation's post-time. At various points throughout the main body of this book, I make reference to an additional analysis in which the anterior viewpoint denotes a concept of its own, namely an ongoing state brought about by the termination of a situation (e.g. Parsons1990; Smith1997). Figure 1.5 illustrates these two understandings.

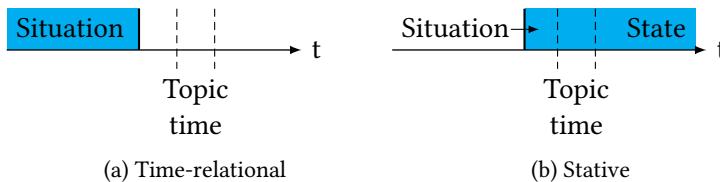

Figure 1.5: Two analyses of the anterior viewpoint

Lastly, it is important to keep in mind that what is labelled a “perfect(ive)” or the like in the descriptive tradition of a given language may correspond to more than one actual viewpoint. For instance, from Singer1984's (Singer1984) description of the “Perfektum” in Tunisian Arabic it becomes clear that this verbal paradigm has both perfective and anterior readings. At various points throughout this book I use the term BOUNDED VIEWPOINT as a handy cover term for the perfective and anterior viewpoints, as well as for instances of non-progressive future situations.

1.6.3.2 Actionality

As far as situation time is concerned, I mostly rely on Vendler1957's (Vendler1957) familiar classification of predicates into four classes, based on the three binary parameters [\pm durative] [\pm dynamic] and [\pm telic]. Thus, according to Vendler1957, STATES like the denotation of English *to know* are durative (they extend in time), stative (they require no energy input) and atelic (they are not directed towards an inherent endpoint). ACTIVITIES, such as *to run*, *share* [+durative] and [-telic] with states, but differ from them in being dynamic. Vendlerian ACCOMPLISHMENTS such as *to build a house*, in turn, are distinguished from activities in being [+telic]. Lastly, ACHIEVEMENTS like *to die* are considered to lack a significant duration, but to be dynamic and telic. In addition to Vendler's four classes, I follow Smith1997 in assuming a group of SEMELFACTIVES, which are punctual and dynamic but atelic occurrences such as *to blink*. At certain points, primarily in the discussion of data from Bantu languages, I also adopt the notion of INCHOATIVE

1 Introduction

VERBS. Simplifying slightly, these are predicates that encode a state plus a point or process of entrance into it; see **CranePersohn2019** and references therein for more discussion.

1.6.3.3 Temporal regions

An additional concept from **Klein1994**'s framework which will be relevant, among other things, in my discussion of degrees of temporal remoteness (Section 2.4.6), is that of a TEMPORAL REGION. In broad strokes, the latter is the characteristic and contextually varying environment surrounding any given time span. For instance, the notion of 'now' can be understood as "in the region of, but not before" utterance time (**Klein1994**).

1.6.4 Focus, focus quantifiers, and scales

Throughout various parts of this book, especially in Chapter 3, I discuss uses of STILL expressions as focus-sensitive quantifiers and in functions that involve scales of some sort. In what follows, I briefly lay out my understanding of these concepts.

1.6.4.1 Focus and focus quantifiers

Following established practice, I assume that linguistic FOCUS serves to relate the denotation of a given constituent to alternative meanings of the same type (**Gast2012**; **GastvanderAuwera2011**; **Hole2004**, **Hole2006**; **Koenig1991**; **Rooth1985**, **Rooth1992**, **Rooth1996**; among others). Focus-sensitive operators, in turn, quantify over the resulting set of CONTEXT PROPOSITIONS (**Kay1990**), which are those propositions that differ from the given TEXT PROPOSITION in the denotation of the constituent containing the focus. Within this realm, I distinguish between two primary types of operators. ADDITIVE operators denote positive, existential quantification. That is, their use requires that the common ground contain at least one alternative denotation that can yield a true proposition; see (23). Note that in the case of (the perhaps slightly misnomed) scalar additives, to which I turn below, the existential reading is a mere default assumption. As far as STILL expressions are concerned, I discuss a variety of additive functions in Section 3.3.1.

- (23) *Tom_{FOC} attended the meeting, too.*
 → At least one more person attended the meeting.

1.6 Theoretical preliminaries

In contrast to additives, RESTRICTIVE focus quantifiers denote negated quantification. The most familiar type of these are EXCLUSIVE operators such as English *only*. These denote negated existential quantification, that is to say, none of the context propositions is possibly true. Example (24) is an illustration.

- (24) *Only Oscar_{FOC} attended the meeting.*
 → No one else attended the meeting.

Exclusive operators are not the only type of restrictive focus quantifiers. Items from this larger class may also express negated universal quantification (Gast2012; Hole2004, Hole2006, among others), which is to say, not all context propositions hold true. An example of such an operator is English *at least* in its evaluative and epistemic senses (Gast2012), the first of which is illustrated in (25). For lack of an established term, I refer to this type of marker by the mnemonic label of AT LEAST-TYPE operators. In Sections 2.5.2.1 and 3.4 I discuss various restrictive functions of STILL expressions. A schematic summary of the typology of focus quantifiers just outlined is given in Figure 1.6.

- (25) *He may not always meet all my needs, but at least [he doesn't chase after other women or beat me up]_{FOC}.* (Forst, *Experiencing father's embrace*)
 → He has some, but not the maximal degree of husband qualities.

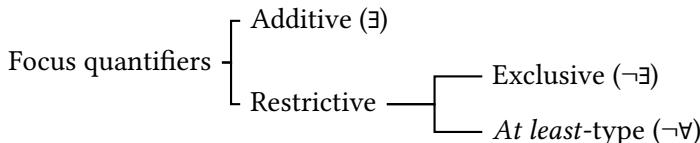

Figure 1.6: Typology of focus quantifiers

1.6.4.2 Scales and scalar operators

Having addressed the core tenets of focus and focus quantification, I now turn to SCALES. These are, in short, ordered sets of alternative denotations (e.g. Fauconnier1975; Israel2001, Israel2011; Jacobs1983). Their ordering relation may be strictly logical or mediated by “general and contingent pragmatic knowledge about how the world normally seems to work” (Israel2011). Crucially, such an ordering based on (potentially pragmatically mediated) entailments means that any given scale has a single, unequivocal direction: lower ranking denotations yield less entailments and vice versa. However, as Israel2011 highlights, “for every canonical

1 Introduction

scale there exists a corresponding inverted scale”, such as scales of plausibility vs. implausibility, scales of centrality vs. *decentrality*, and so on. This point proves to be relevant in my discussion of the *STILL-as-marginality* use in Section 3.2.

SCALAR FOCUS QUANTIFIERS provide a ranking of propositions based on SCALAR MODELS or propositional schemas, which are ordered by the degree of inferences they license in regard to a question under discussion (Gast2012; GastvanderAuwera2011, GastvanderAuwera2013; Israel2001; Israel2011; Kay1990). Consider example (25). While the three accessible propositions themselves do not contain any scalar elements, they licence inferences about different degrees of marital quality, as illustrated in (26).

- (26) Question under discussion: How good of a husband is he?

Propositional content	Inference	
He meets all my needs.	→ He's the perfect husband.	
He doesn't chase after other women.	→ He's an average husband.	
He doesn't beat me up.	→ He has minimal qualities.	
(cf. Gast2012)		entails

Perhaps the best known scalar focus operators are the so-called SCALAR ADDITIVES. These signal that the text proposition ranks higher in a propositional schema, i.e. is more informative, than all other propositions under consideration (GastvanderAuwera2011, GastvanderAuwera2013; Kay1990). Example (27) is an illustration. As schematized in (28), the text proposition ‘he commands the winds and the water’ licenses more inferences than all other accessible propositions, hence it outranks them. Importantly, and unlike for additive operators in the stricter sense, an existential reading (i.e. that the less informative propositions hold true as well) is only a default assumption which is derived from the scalar notion and arises under normal conversational conditions (Fauconnier1975; GastvanderAuwera & Schwartz2005). This becomes particularly visible in an example like (29), where one of the text propositions is negated without resulting in contradiction.

- (27) English

Who is this? He commands even [the winds and the water]_{FOC}, and they obey him (Luke 8:25, *New International Version*)

- (28) Question under discussion: How powerful is this man?

Propositional content	Inference
The winds and the water obey him.	→ He is very powerful.
His children obey him.	→ He has normal powers.
His dogs obey him.	→ He has little power.
(cf. GastvanderAuwera2011)	

1.7 The structure of this book

- (29) *Can it be possible that his children do not obey him, given that even [the winds and the water]_{FOC} do?*

Lastly, scalar additives are usually said to come in two primary flavours (GastvanderAuwera2013). With BEYOND operators like German *sogar* or Italian *perfino*, the degree of some salient property corresponding to the focus denotation correlates positively with the rank of the entire proposition. With BENEATH operators, such as German *auch nur* or English *so much as*, on the other hand, a high-ranking proposition is aligned with a low focus value. Correspondingly, the two types of scalar additives are felicitous in different environments. Yet a third type, UNIVERSAL scalar additives, can have both readings, depending on the context. English *even* is such a case. Thus, while in (27) above a high degree on a scale of control goes together with a highly informative proposition, under certain conditions, this alignment can be reversed, as illustrated in (30). I address scalar additive uses of STILL expressions in Sections 2.5.2.3 and 3.3.4.

- (30) English

I refuse to believe that Bill even slapped_{FOC} that man.

BENEATH reading: ‘... let alone inflicted more harm on him’

BEYOND reading: ‘... not only insulted but also ...’

(cf. GastvanderAuwera2011)

1.7 The structure of this book

1.7.1 The main body

The wide array of functions attested for the sample expressions, many of which are tightly interconnected, proposes a serious challenge for their presentation in a linear format. For the sake of convenience, I have made a rough division in my survey between time-related uses (Chapter 2) and those uses that are primarily non-temporal (Chapter 3). Due to the nature of the subject matter this division is an imperfect one. For instance, in Section 3.4.3 I discuss a use that combines restrictive and temporal notions (‘thus far only’) and in Section 3.3.3 I address the so-called “further-to” (Klein2018) use, which involves both additivity and phasal notions (‘do in addition to, and before moving on’). Within each of the two main chapters I have grouped together different sets of uses on a primarily semantopragmatic basis and lay the focus on those uses attested for at least two sample languages and/or expressions. The discussion of each use, is, for the most part, based on the templatic structure outlined in Figure 1.7. At some points, however,

1 *Introduction*

I slightly deviate from this template, primarily by splitting the “closer look” and “discussion” components into several sub-parts each or by merging them into one. Lastly, Chapter 4 contains a brief summary of my findings.

Introduction A brief definition, together with one or more illustrations and a delimitation from superficially similar and/or related functions.

Distribution in the sample An overview of the expressions that have the relevant use, plus a summary of observable areal patterns and the question of morphosyntactic status. Where applicable, this includes a first glance at relevant collocational patterns or distinguishable subtypes of a use.

A closer look An in-depth descriptive exposition of the semanto-pragmatic characteristics and of recurrent usage patterns, accompanied by ample illustrations.

Discussion An examination of the conceptual and implicational relationships of the function under discussion to phasal polarity **STILL** and to other relevant functions. This may include a diachronic perspective.

Figure 1.7: Templatistic structure used in Chapters 2 and 3.

1.7.2 *About the appendices*

The main body of this book is accompanied by an extensive set of appendices in the form of data sheets with additional comments and discussion. These appendices give an overview of the individual expressions found in each of the sample languages, in contrast to the discussion in Chapters 2 and 3, which is based on individual sets of uses across expressions and languages. I have opted to include these appendices to not only increase transparency, but also to build a resource that allows an easier access to the often widely dispersed data, thereby hopefully encouraging subsequent research – be it by building on my interpretation of the data, or by developing alternative analyses. The appendices are sorted by macro-area, followed by languages and expressions. For each item, they indicate the grounds on which it was classified as an exponent of **STILL** and give background information, such as questions of formal variation or known etymologies (where applicable). For each function of a given marker, bibliographic references are given and the key findings therein are summarized. Where my own analyses of the data differs from existing descriptions or expands on them, these points are given explicit discussion. The same applies to analyses of the more tentative type. The overview of each function is furthermore accompanied with illustration from a wide array of sources. As I discuss in Section 1.5.3, many of the most

1.7 The structure of this book

valuable examples were found dispersed throughout grammars, or deep within text collections and corpora, and in quite a few cases they lacked segmentation and glosses. To allow for an easier interpretation of the data, I added context information to examples from actual discourse, together with glosses and morpheme-by-morpheme segmentation. For more information about the templatic structure of the appendices, the reader is referred to Appendix A.

2 Temporal and aspectual uses

La mágica Esperanza anuncia el
día
en que sobre la roca de armonía
expirará la pérvida sirena.
¡Esperad, esperemos *todavía*!¹

(Rubén Darío)

2.1 Introduction

In this chapter, I survey uses of **STILL** expressions that are primarily time-related. I start out by reviewing a set of uses that lie on the fringes of phasal polarity **STILL** in Section 2.2 and then turn to true functional extensions in Sections 2.3 to 2.5. In Section 2.3 I discuss functions that relate to other phasal polarity concepts, and in Section 2.4 I address uses that can be subsumed under a broad label of other time-related “adverbial” functions. These include, among other things, uses pertaining to repetition, the signalling of ‘always, all the time’, or the marking of degrees of temporal remoteness. Lastly, in Section 2.5 I turn to uses in the realm of temporal connectives and the modification of temporal adverbials.

2.2 Uses on the fringes of ‘still’

2.2.1 Introduction

In the following subsections, I discuss several uses that lie on the fringes of **STILL**. By this I mean patterns of use for which there is not necessarily a clear-cut answer as to whether they can be subsumed under this phasal polarity function or constitute genuine extensions into other domains. More specifically, in Section 2.2.2, I examine the use of **STILL** expressions in the context of monotone changes along some scale. In Section 2.2.3, I discuss German *noch* in an idiomatic collocational pattern with the meaning of ‘thus far always, thus far everyone’. In

¹‘Magic Hope foretells the day when on the rock of harmony the perfidious siren shall expire. Wait, let us *still* wait!'

2 Temporal and aspectual uses

Section 2.2.4, I turn to a use in which STILL expressions signal continued iteration ‘yet again’. Lastly, in Section 2.2.5 I address functions that pertain to identity.

Before moving on to an examination of these fringe uses, a few words on some cases that I do not discuss here. To begin with, for the STILL-as-marginality use (‘a penguin still counts as a bird’), I refer the reader to Section 3.2. Secondly, about a handful of expressions in my sample have a use as modifiers of a temporal adverbial instead of the main predication (‘it is still T, when e occurs’’, Loebner1989). I reserve my discussion of these cases for Section 2.5.2.2. Another set of sample expressions can signal a combination of temporal inclusion and a restrictive meaning element (‘thus far only’). I discuss those in the context of restrictive operators, in Section 3.4.3. In addition, there are several semi-transparent patterns of use that I address in the context of interactional functions, in Section 3.5. Lastly, for the most part I do not offer a discussion of STILL expressions as phrase-level adverbial modifiers, such as in (1). I take such instances to involve phasal polarity in the context of language-specific, but generalized syntactic configurations or processes.²

(1) Spanish

*Es cierto que existe un gran nivel de frustración por [la [todavía limitad-a]ADJP **participación**]NP*
 COP.3SG certain-M COMP exist-3SG ART.INDEF:SG.M great level of
 frustration for ART.DEF:SG.F still limited-F participation(F)
en el proceso político.
 in ART.DEF:SG.M process(M) political-M

‘It is true that there is a high level of frustration over the still limited participation in the political process.’ (CORPES XXI, glosses added)

2.2.2 ‘Still’ in contexts of scalar variables

Introduction (part 1) In this subsection I discuss the use of STILL expressions in contexts involving a (possible or factual) development on a scale. By this, I mean contexts that feature an ordered set of alternatives that encompasses more than a polar opposition between persistence and discontinuations. Examples (2, 3) are illustrations. In (2) there is a decrease in fleet size, whereas (3) involves a limited advancement on a scale of age.

(2) Spanish

La Armada ten-ía 337 vehículo-s y se
 ART.DEF:SG.F navy(F) have-PST.IPFV.3SG 337 vehicle-PL and REFL.3

²See, for instance, RAEGramatica on Spanish, or ZifonunEtAl1997 on German.

2.2 *Uses on the fringes of 'still'*

- desprend-ió de tan solo nueve. Todavía tiene*
 get_rid_off-PST.PFV.3SG of so only nine still have.3SG
una flota de 328.
 ART.INDEF:SG.F fleet(F) of 328
 'The navy had 337 vehicles and got rid of only nine. It still has a fleet of 328.' (CORPES XXI, glosses added)

(3) Tunisian Arabic
Humma māzāl-u mā-bilg-ū-š māzāl
 3PL.M still-3PL.M NEG-reach_puberty.PFV-3PL.M-NEG still(.3SG.M)
sum⁹r-hum tisf⁹ snīn.
 age(M)-POSS.3PL.M nine year.PL
 'Sie sind noch nicht in der Pubertät, sie sind erst ungefähr neun Jahre alt
 [They haven't reached puberty yet, they are still only about nine years old]' (RittBenmimoun2011, glosses by FischerEtAlTunisian)

Whereas (2, 3) feature numerical scales, example (4) involves a development on a degree scale, namely a reduction in the intensity of precipitation. Lastly, the variable in question may itself be the extension of a time span. For instance, what is at stake in (5) is the extent of the stretch between time of utterance and the feast.

Introduction (part 2) The use of phasal polarity expressions in scalar contexts led to an extensive debate during the first wave of research interest in these items (vanderAuwera1991BeyondDuality, vanderAuwera1993; Garrido1992; Loebner1989,

2 Temporal and aspectual uses

Loebner1999; Mittwoch1993). As this dispute has direct implications for my examination of the sample data, a brief excursion is in place. Much of the just-mentioned controversy centres around peculiarities of German, but is said to have theoretical implications of cross-linguistic validity. The bone of contention lies, for all intents and purposes, in the interpretation of two sets of empirical facts. The first set pertains to issues of compatibility. Thus, in the context of monotone functions, German *noch* only combines with decreases, as in (6) and in (8a) below.

(6) German

Context: I had ten copies of a book.

Ich hab' noch fünf (übrig).

1SG have.1SG still five left

'I still have five (left).' (personal knowledge)

Unlike an expression such as Tunisian Arabic *māzāl* in (3) above, or English *still* (in collocations like *still only*, *still no more than*), German *noch* is generally infelicitous when a limited increase is at stake and the alternatives are not polar opposites. These contexts are instead covered by an entirely distinct item, the restrictive marker *erst* 'no more than', lit. 'first, erstwhile', as illustrated in (7).

(7) German

Er ist erst zwanzig Jahr-e alt.

3SG.M COP.3SG first twenty year-NOM.PL old

'He is (still) only twenty years old.' (DWDS, glosses added)

Secondly, when a scalar variable is at issue German *noch* displays the characteristic syntactic behaviour of a focus particle, in that it can become a syntactic sister to the constituent containing the focus. For instance, in (8a) *noch* is an adjunct to the noun phrase *wenige Meter* 'a few meters', as is evident from them occupying the forefield position of a V2 clause together. This behaviour is shared, among the relevant expressions, with *erst* and with the other phasal polarity items, as shown for the ALREADY expression *schon* in (8b).

(8) German

ge-start-et.
 PTCP-start-PTCP
 '[It's] already [been] eight times [that] Christoph ... has initiated a
 donation campaign on his birthday.' (found online, glosses added)

The interpretation of these characteristics goes hand in hand with the acceptance or rejection of Loebner1989's (Loebner1989, Loebner1999) "duality hypothesis". Without going too deep down the rabbit hole,³ this hypothesis has it that sets of operators manifest as neatly organized paradigms in the form of Aristotelian squares of oppositions. Given that in contexts of scalar increases and affirmative polarity the ALREADY expression *schon* patterns with restrictive *erst* rather than with the STILL expression *noch*, a distinct scalar paradigm is posited for German. *Noch* in contexts like (8a), on the other hand, is said by Loebner1999 to form part of yet a third paradigm, together with *nur noch* 'only as little as ... anymore (lit. only still)' occupying the second positive corner. While this point relates, first and foremost, to the question of how systems of operators are conceived of, it is tightly interwoven with a particular semantic analysis. Thus, under the duality hypothesis it is assumed that the separate scalar paradigms also have a distinct meaning structure, namely that their members are operators that i) associate with a lower constituent and ii) vest this constituent with a predetermined temporal dynamic in the form of a presupposition about different values at adjacent times. In other words, in an example like (6), repeated below, *noch* is said to not function as a sentence adverb. Instead, it is said to relate the denotation of *fünf* 'five' to higher values at an earlier time (~'I have the now reduced number of five').

(6) German

Context: I had ten copies of a book.
Ich hab' noch fünf (übrig).
 1SG have.1SG still five left
 'I still have five (left).' (personal knowledge)

Opponents of Loebner1989's hypothesis, on the other hand, understand the contribution of *noch* in the context of scalar variables as the same as it has in

³See MosegaardHansen2008 for a more concise summary.

2 Temporal and aspectual uses

binary contexts. Seen from this point of view, example (6) denotes my persistent possession of five books vis-à-vis the possible discontinuation of this state-of-affairs. The reading of a decrease over time then goes back to the combined effects of phasal polarity, scalar semantics and pragmatic calculus.⁴ To come straight to the point, below I advocate for the latter stance. Nonetheless, a separate examination of scalar contexts allows for valuable insights into parameters of variation across expressions and languages as well as into derived usage patterns.

To conclude, a cross-linguistic examination of **STILL** expressions in scalar contexts must consider the parameter of syntactic distinctiveness and whether a given **STILL** expression is compatible with decrease and/or increase contexts. As a derived question, such an examination needs to address the issue of whether there is any reason to assume that the semantic import of **STILL** expressions in contexts of scalar variables differs in any way from their contribution to run-of-the-mill polar contexts.

Distribution in the sample Against the backdrop of the questions just outlined, Table 2.1 lists the sample expressions for which the data include scalar contexts and it indicates whether the expressions in question show a distinct syntactic behaviour there. Table 2.1 also indicates whether a given expression is attested with decreases and/or increases along some scale. For a numeric breakdown of the latter parameter, see Table 2.2 below. Note that Tables 2.1 and 2.2 do not give information as to whether increase contexts generally require the addition of a restrictive ‘only’ operator, which is a question I discuss separately further down the line.

As a brief summary, in the sample data scalar contexts are attested for 35 expressions from 33 languages (37 expressions and 35 languages if including problematic cases), covering all six macro-areas. If I were to consider the use in scalar contexts as featuring a distinct function, these numbers would make it both the most frequent and the geographically most widespread function in my sample. However, as I argue below, there is no principled reason for such an assumption,

⁴I purposely avoid the terms *focus* and *scope* here, as they are sometimes used in confusing ways in the literature. In line with [Loebner1989](#), I assume that the relevant expressions have sentential scope in both cases and under both analyses. What is debated is the size of the constituent within the expression’s scope and for which alternatives are considered. While it is tempting to portray the latter issue as a question of broad vs. narrow focus, phasal polarity itself is not associated with focus in the same way that operators like *also*, *even*, or *only* are ([Beck2020](#); [Klein2018](#)), unless we assume that the (propositional content of the) entire sentence may be in focus; the latter stance is taken, for instance, in [Krifka2000](#).

2.2 *Uses on the fringes of 'still'*

at least on semantic grounds. On a more fine-grained level, the sample data reveal a marked asymmetry in the types of attestations. Thus, decrease contexts are attested for more than twice as many expressions as increase contexts (see Table 2.2). Lastly, a distinct syntactic behaviour is found with only two expressions, namely the case of German *noch* discussed above and Serbian-Croatian-Bosnian *još*.

In what follows, I first take another look at the question of syntactic distinctiveness. I then discuss the distribution of decrease vs. increase contexts. Subsequently, I examine each of the two types of contexts in some more depth; this includes a discussion of usage patterns that are derived from and/or border on STILL in scalar contexts. Lastly, I offer a brief summary and conclusion.

A closer look: scalar uses as structurally distinct As I indicated initially, one of the points that the debate around the status of phasal polarity expressions in scalar contexts is based on is the fact that the relevant German items show a distinct syntactic behaviour there. That is, they act like focus particles, being able to form a single constituent with a phrase containing the focus. This is shown in (8a), where *noch* and the noun phrase 'few meters' together occupy the initial position of a V2 clause.

(8a) German

- [**Noch** [**wenig-e Meter**]]_{NP} *war-en es bis*
 still few-NOM.PL meter.PL COP.PST-3PL 3SG.N until
zu-r Staffel-übergabe...
 to-ART.DEF:DAT.SG.F relay-handover(F)
 'Only a few meters were left until the passing of the baton...'
 (found online, glosses added)

The only other expression in my sample that displays this type of distinct behaviour is Serbian-Croatian-Bosnian *još*. The examples in (9) illustrate this item as moving through the sentence together with its sister constituent *pet knjiga* 'five books'. As a further diagnostic of constituency, note how *još pet knjiga* in (9b) precedes the second-position clitic complex *mi je*.

(9) Serbian-Croatian-Bosnian

ⁱ Only one clear-cut example in the data.ⁱⁱ Only one example, which may be subsumed under the ‘thus far only’ use (Section 3.4.3).ⁱⁱⁱ Incompatible in their unaugmented forms.^{iv} Borderline case of a STILL expression or tentative inclusion.

2.2 *Uses on the fringes of 'still'*

- b. [*Još [pet knjiga]*]_{NP} *mi je osta-lo.*
 still five book.GEN.PL 1SG.DAT COP.3SG remain.PFV.PTCP-SG.N
 'What I have still left is five books.' (Stefan Savič, p.c)

On purely structural grounds, one may therefore consider the cases of German *noch* and Serbian-Croatian-Bosnian *još* as indicators of a distinct scalar use. As I discuss below, there is, however, no need to stipulate a distinct semantics that differs from phasal polarity **STILL**. Lastly, note that, in several cases in the sample, what appears to be a comparable syntactic behaviour at first glance turns out to be a mere superficial similarity upon closer examination. For instance, the Chamorro expression *ha'* is an enclitic (though written separately from its host) that attaches to its focus, which in phasal polarity function is the main predicate. The two attestations of scalar contexts in the data, which include the example in (10), both involve non-verbal predication without an overt copula. That is, any possible distinction in the associated constituent of *ha'* is masked from the outset.

- (10) Chamorro
Bu~bula ha' tinanum ti hu tungu' na manmamakannu'.
 CONT~many STILL plant NEG 1SG.RL know REL PL.edible
 'There are still many plants I did not know are edible. (lit. they are still many, the plants ...)' (Chung2020)

A closer look: distribution of decrease vs. increase contexts Moving on to a closer examination of different contexts, Table 2.2 gives a numeric breakdown of the attestations of scalar decreases vs. increases in the sample data. As can be gathered, decrease contexts are attested for roughly over twice as many expressions and languages as contexts involving a limited increase. What is more, the sample data point towards the implicational near-universal in (11), the statistical nature of the latter being due to Mateq *bayu*. In the available data, this item is only attested in increase contexts. That said, its inclusion in the sample is somewhat tentative, in that *bayu* seems to lexicalize a combination of phasal polarity **STILL** and restrictive 'only', which would explain its comparatively unusual distribution. I discuss this expression in more depth in Section 3.4.3.

- (11) If a **STILL** expression is compatible with contexts of a scalar increase, it is more likely than not to also be compatible with contexts of a decrease.

Briefly setting aside the cases of German *noch*, Mandarin Chinese *hái* and Serbian-Croatian-Bosnian *još*, it appears that the marked asymmetry observed in Table 2.2 boils down to two main factors. First, and as I pointed out initially,

2 Temporal and aspectual uses

Table 2.2: Quantitative breakdown of scalar contexts

	Expressions	Languages
Overall	35 (37)	33 (35)
Decrease contexts	35 (36)	33 (34)
Increase contexts	15 (20)	13 (17)

Note. Counts in parenthesis include borderline cases.

I only considered those instances that feature a non-binary set of alternatives, given that it is only in these cases that the question of a distinct scalar function arises in the first place. This inherently favours decrease contexts. Consider example (12). Accessible alternatives to the text proposition ‘there is much [sugar] at home’ are ‘there is little at home’ and ‘there is none at home’. Both would constitute valid rhetoric arguments for purchasing sugar, and the two of them can be subsumed under the evoked discontinuation scenario (‘there isn’t much anymore’).

(12) Acehnese

Hana lön-bloe saka sabab mantöng le di rumoh.

NEG 1SG-buy sugar because still many in house

‘I am not buying any sugar because there is still much at home.’

(Asyik1987)

In many examples that could be read as involving an increase, on the other hand, the existence of some entity is presupposed, such that a zero value is not even under consideration. Paired with a predicate that forms part of an antonym pair, such as small vs. big in (13), this results in numerous attestations and, due to the often limited data, entire expressions that I had to exclude from the counts.

(13) Ruuli

OBukama, abantu abali omu Bukama abasing[a] obwingi tibasomere.

‘The cultural institution, most of people in the cultural institution are not educated.’

Aka-tundu aka-som-ere ka-kya-li ka-tono.

NCL12-piece REL.SUBJ.NCL12-read-PFV SUBJ.NCL12-still-COP NCL12-small

‘The portion that is educated is still small.’ (RuuliCorpus, glosses added)

A second, related reason for the predominance of decrease contexts lies in discursive considerations. In many instances of a decrease along some scale, what

2.2 *Uses on the fringes of 'still'*

stands in the communicative foreground is persistence as such, rather than the precise value in question. For instance, in (14a) the main message is ‘we hadn’t spent all our money’, which invites the use of *still*. Where the monotonic relationship is positive, on the other hand, it is often a particularly low value that constitutes the key takeaway. In these cases, using a restrictive marker does the job just as well, especially if the variable in question is inherently time-dependent, as it is in (14b). This option may even be preferred for reasons of brevity, namely if the use of a **STILL** expression would necessarily or preferably go along with using an additional restrictive marker anyway.

(14) English

- a. *We still had a few pounds in our pockets, so we very quickly decided, why not!* (Cassidy, *Indifferently*)
- b. *Harry’s parents were only 21 years old when they were killed by Voldemort.* (found online)

The last point provides a direct link to the case of German. As I pointed out above, part of the debate about the alleged special status of scalar contexts is due to the general incompatibility of German *noch* with increases, be it alone or as part of a ‘still only’ collocation. These contexts are instead covered by a separate item, the scalar restrictive marker *erst*. In the sample languages, a parallel situation obtains in Serbian-Croatian-Bosnian, where increase contexts require *tek* ‘no more than’ instead of the **STILL** expression *još*. Similarly, in Mandarin Chinese *cái* ‘only’ is the marker of choice with increase functions. I am aware of no other sample expressions that are subject to a similar restriction. What is more, it is noteworthy that in German and Serbian-Croatian-Bosnian this division of labour only affects the unaugmented forms *noch* and *još*. Their emphatic versions (i.e. dedicated to unexpectedly late scenario) of the form ‘always still/still always’ are amply attested in increase contexts, where they take scope over a restrictive operator, as in (15, 16). This is likely because there are no evaluative counterparts to *erst* and *tek* in the same fashion that *noch* and *još* have *immer noch/noch immer* and *još uv(ij)ek*.

(15) German

 3SG.DAT.M remain.IPFV.3SG only still one.ACC.SG.N as before flee.PFV.INF from_here

‘Für ihn blieb nur noch das eine zu tun: so schnell wie möglich zu fliehen.
 [There was **only one option left** for him: to get away as soon as possible]’
 (KontrastiveGrammatik, glosses added)

German additionally has the fixed expression *kaum noch* ‘hardly anymore’, lit. ‘hardly still’, for a significant reduction in frequency or intensity; see (21).

(21) German

Er trank kaum noch.
 3SG.M drink.PST.3SG hardly still
 ‘He hardly (ever) took a drink anymore.’
 (KoenigEtAl1993, glosses added)

Though different in terms of surface structure, a comparable ‘only still’ combination is found in the Komnzo example (22). In the sample data, similar attestations are found for Udihe *xai(si)* and Kalamang *tok*. Other languages, however, make use of the mirror image, so to speak, in the form of ‘already only’. Example (23) illustrates this for Spanish.⁵

(22) Komnzo

Context: a girl has been attacked and eaten by a crocodile.
Ebar=nzo komnzo zwarärm.
 head=just still 3SG.F:PST:DUR:be
 ‘Just her head was still there.’ (Doehler2020)

(23) Spanish

Pedro ya tiene solo cien [libro-s].
 P. already have.3SG only hundred book-PL
 ‘Pedro already has **only** a hundred [books].’ (Garrido1992)

Scalar decreases: borderline cases and derived uses Before moving on to a discussion of the semantic underpinnings of STILL expressions in decrease contexts, it is worthwhile addressing a few usage patterns that build on them. The first case involves Plateau Malagasy *mbola*. While, in the data I consulted, this

⁵vanderAuwera1993 reports the same for Hungarian (not in my sample).

2.2 *Uses on the fringes of 'still'*

expression is not attested in combination with scalar predicates, it features in the fixed collocations *mbola aiza* 'still where' and *mbola rahoviana* 'still when' that refer to large remaining quantities of distance and time, respectively. Example (24) illustrates *mbola aiza*. These collocations bear some resemblance to the idiomatic German expression *noch hin sein* 'be a long way off', lit. 'still be thither'. The latter, illustrated in (25), also implies a large remaining quantity (of time), even if none is explicitly stated.⁶

- (24) Plateau Malagasy

Mbola aiza i<za>ny.

still where DEM.SG<INVIS>

'C'est encore loin, il c'en faut encore de beaucoup, il y en a encore pour longtemps (a marcher, a progresser) [It's still far away, it's still a long way to go, it's still a long time walking or moving]'

(Dez1980, glosses added)

- (25) German

Bis Weihnachten ist noch hin, aber wir ess-en Keks-e
until christmas COP.3SG still thither but 1PL eat-1PL cookie-PL

i-m Sommer auch gerne.
in-ART.DEF:DAT.SG.M summer(M) also gladly

'Christmas is still a long way off, but we also enjoy cookies during summer time' (found online, glosses added)

In fact, usages pertaining to remaining stretches of time constitute a recurring pattern in the data. Thus, Manda (*a*)*kona* forms part of a conventionalized construction in which it pairs with an adjectival predicate consisting of *chokópi* 'little' marked for one of the locative noun classes. This construction signals proximity of a future situation (Appendix B.8.1.3.2), as illustrated in (26). Its meaning obviously builds on a decrease function 'there is little [time] still [left] > soon'. It furthermore finds a partial parallel in Swahili, the local lingua franca; see the fixed phrase in (27). Notwithstanding its semantic transparency, Bernander2021 points out that the Manda construction shows first signs of grammaticalization. Thus, it is not only restricted to expletive-like locative subjects, but also invariably follows the foregrounded predicate, occupying what in a mono-clausal structure corresponds to the typical adverb position.

⁶The opposite perspective is also available in German: *Das ist schon her* 'A long time has passed since (lit. that's already hither)'.

2 Temporal and aspectual uses

 still a_little

'Pas de si tôt encore, pas de suite, un peu plus tardé [Not quite yet, not immediately, a little later]' (Sacleux19391941, glosses added)

Outside of East Africa, a case that is comparable in meaning is found in Tundra Nenets; see (28).⁷ In syntactic terms, the collocation *təmna-rka* is partially irregular, in that it constitutes one of only two instances in which the STILL expression *təmna* can serve as the main predicate of a sentence.

- (28) Tundra Nenets

Təmna-rka.
 still-CMPR

'Still a bit, not quite yet.' (Lehtisalo1956; Tereshchenko2008)

The duration of a time span, no matter whether short or long, also lies at the heart of two biclausal structures in Classical Nahuatl (Appendix E.1.1.3.2). The first of these is schematically illustrated in (29a) and exemplified in (29b). An illustration of the second structure, again both in schematized form and with an attested examples, is given in (30).

- (29) Classical Nahuatl

a. [oc p] [in (icuāc) q]
 still p DET then/when q
 'it is still *p* when *q* (i.e. it is still a certain amount of time until *q*)'
 (see Launey1986)

b. [*In-in ca oc huècauh*] [in mo-chihua-tīuh]
 DET-PROX PRED still long_time DET SUBJ.3:REFL.3-do-go.IPFV
 'Ceci se produira dans longtemps [It will happen **in a long time**]'
 (Launey1986, glosses added)

- (30) Classical Nahuatl

⁷See Nikolaeva2014 on comparative *-rka* as a minimizer.

2.2 *Uses on the fringes of ‘still’*

- a. [oc *p*] [(in) *q-z/-quiuh*]
 still *p* DET *q*-PROSP/-COME.IPFV
 ‘It is still *p* that *q* is going to happen/is approaching (i.e. it is still a certain amount with *q* being anticipated).’
 (see Launey1986)
- b. [[*Oc yuh macuil-ilhuitl*] [*àci-quiuh in*]
 still thus five-day arrive-COME.IPFV DET
*to-tlàtò-ca-uh]], in *ō-tech-tlalhui-qué.*

 ‘Cinco días antes que llegara el Virrey nos preuinieron [Five days before the viceroy’s arrival they warned us].’ (Carochi1645, glosses added)*

Similar to the Manda case discussed above, the two Classical Nahuatl constructions are fully transparent in their meaning. That they build on a decrease function also becomes evident from the fact that the ALREADY expression *ye* is used in a parallel fashion, namely to signal the time span that has elapsed since a given situation (i.e. an increase of time); see (31). What is more, ‘still a certain amount of time’ is attested with other sample expressions, as well. See, for instance, Tunisian Arabic *māzāl* in (5) above.

- (31) Classical Nahuatl
 [*Ye onxi-huitl*] [in *àcān ni-quiça*].
 already two-year DET nowhere SUBJ.1SG-go_out
 ‘Dos años ha que no salgo a ninguna parte. [It’s been two years that I haven’t gone out at all]’ (Carochi1645, glosses added)

What is striking, however, is the apparently high degree of conventionalization of the Classical Nahuatl constructions as two of the default means of indicating the extension of a time span before some situation. What is more, in this, but in no other use, the STILL expression *oc* and the ALREADY item *ye* can modify the same predicate, which yields a double perspective on the temporal separation between two points in time. Example (32) is an illustration. Here, *oc* signals the duration of the span from ancient times forward to utterance time, while *ye* projects backwards, indicating the time that has passed since (Launey1986).

- (32) Classical Nahuatl
 [[*In oc ye huècauh*], [*in oc ye nēpa*], [*in oc ye*]

‘Long ago in the past, during the time of the ancients [i.e. when it was still a long time from there (to now) and already a long time (ago)]...’
 (LauneyMackay2011)

Lastly, note that Modern Hebrew *sod* and Northern Qiang *tce-* feature in collocational patterns ‘still a bit, still a moment’ that signal proximity to some development (‘almost, at the point of’). While these constructions bear some similarity to the ones discussed up to this point, they appear to involve an additive build-up of intervals ‘a little more and ...’ rather than a decrease function. I therefore discuss them separately in Section 3.5.4.

Discussion: scalar decreases As I laid out initially, there has been an extensive debate as to whether phasal polarity expressions in scalar contexts make a different semantic contribution than what they do in “regular” polar contexts. In what follows, I address this question in regard to STILL expressions in decrease context. Building on the arguments brought forward by **vanderAuwera1991BeyondDuality** (**vanderAuwera1991BeyondDuality**, **vanderAuwera1993**), **Garrido1992** and **MosegaardHans** I reason that there is no principled need for stipulating a distinct scalar function of the items in question, at least not in terms of core meaning.

To begin with, the basic fact that STILL expressions are used in decrease contexts is far from surprising, given the nature of scales. Thus, any item on a given scale entails the values corresponding to all lower ranks and is, by the same token, logically compatible with any and all higher ranks (see Section 1.6.4). For instance, in (14a), repeated below, carrying any greater amount of money entails having a few pounds in the pockets, so that there is no logical contradiction in depicting the latter as a persistent state of affairs.

(14a) English

We still had a few pounds in our pockets, so we very quickly decided, why not! (Cassidy, *Indifferently*)

At the same time, it is well known that, by generalized conversational implicature, the use of a scalar predicate conveys that the value under discussion is the highest one that can be truthfully applied. Importantly, the concept of STILL, as defined in Section 1.4.1, not only involves persistence, but also a prospective component in the form of a conceivable discontinuation scenario. In the absence of a restrictive operator or contextual enrichment to the same effect (to be discussed

2.2 *Uses on the fringes of 'still'*

below), this negation of the text proposition entails the falsity of all propositions containing higher values. Putting the two pieces together, an example like (14a) suggest that the development, if any, can only be a downward movement. In other words, the decrease reading can easily be arrived at through the interplay of phasal polarity, scalar semantics and straightforward pragmatic calculus.

What remains to be accounted for, however, are the peculiarities of German *noch* addressed intially. To briefly recapitulate, this expression is only felicitous in decrease contexts, at least in its unaugmented form. Limited increases, on the other hand, are covered by a dedicated item *erst* lit. 'first, erstwhile'. What is more, like the other German phasal polarity expressions and restrictive *erst, noch* shows the characteristic syntactic behaviour of a focus particle when it is used in scalar contexts. In the context of Loebner1989's (Loebner1989, Loebner1999) duality hypothesis, the sum of these properties is taken as an indication for a distinct semantics. Thus, *noch* in an example like (8a), repeated below, is analysed as associating with a lower constituent, the NP *wenige Meter*, and vesting its denotation with a pre-specified temporal dynamic in the form of a decrease (≈ 'it was the now reduced distance of a few meters...'). This argument could be extended verbatim to Serbian-Bosnian-Croatian *još*, given the parallels in both syntax and distribution discussed above.

(8a) German

[Noch	[wenig-e	Meter]] _{NP}	war-en	es	bis
still			few-NOM.PL	meter.PL		COP.PST-3PL	3SG.N	until
<i>zu-r</i>					<i>Staffel-übergabe...</i>			
to-ART.DEF:DAT.SG.F						relay-handover(F)		
'A few meters were left until the passing of the baton...'								
(found online, glosses added)								

However, even if one accepts the (not unreasonable) assumption that the syntactic behaviour of German *noch* reflects a more narrow semantic operandum, there is still no principled reason to assume a fundamentally different meaning. The same calculus described above can be applied, such that in (8a) a proposition along the lines of 'it was a distance of still a few meters ...' suggests 'there was a remaining distance of a few meters ...'. Put differently, the semantic import of *noch* itself in (8a) can be understood as fundamentally the same it has as a modifier of a depictive predicate in (33).

(33) German

2 Temporal and aspectual uses

Noch benommen erhob	<i>sie</i>	<i>sich...</i>
still	dazed	raise.PST.3SG 3SG.F REFL
'Still dazed, she got up...' (personal knowledge)		

Lastly, the fact that German *noch* is only used in decrease contexts need not be attributed to this item itself. As pointed out before me by **Garrido1992**, it finds an equally satisfactory explanation in the existence of an item dedicated to depicting limited increases, whose high degree of entrenchment can be said to pre-emptively block *noch* from increase contexts.⁸ Intra-systemic support for this interpretation comes from the fact that its evaluative forms *immer noch/noch immer* lit. 'still always/always still' can take scope over restrictives and then be used in increase contexts, as in (15) above. Presumably, this is because there is no equally evaluative counterpart to *erst* in the same way that *noch* has *immer noch/noch immer*. These points carry over verbatim to Serbian-Croatian-Bosnian *još*; see (16) above for an illustration.

Further support for the interpretation just outlined comes from German's close relative Dutch (not in my sample). Thus, the Dutch STILL expression *nog* is perfectly compatible with a restrictive marker in its scope and increase contexts. In all other respects, this item shares the same functional range as its German cognate, which makes it a questionable move to assign different sets of meanings to the two expressions. Crucially, while Dutch possesses two dedicated scalar restrictives, their use is far less generalized than German *erst*. Thus, in most varieties of Dutch, the cognate form *eerst* is restricted to the written medium (**Vandeweghe1992**). The second marker, *pas*, is only beginning to replace the *nog*-plus-restrictive collocations, in that it is mostly interchangeable with the latter, but preferred with inherently time-functional variables such as age (**Vandeweghe1992**). Lastly, a case similar to German and Serbian-Croatian-Bosnian *još* can be made for Mandarin Chinese, where restrictive *cái* is used instead of the STILL expression *hái* in increase contexts. Though *cái* is not inherently scalar in all of its uses (see **Hole2004** for discussion), it is strongly associated with scalar contexts and covers much of the same ground as German *erst* (e.g. **Lai1999**).

In a nutshell, I see no principled reason to assume that the semantics of STILL expressions in decrease contexts is any different from that of contexts in which a binary opposition is at stake. Instead, its interpretation can be arrived at compositionally, through the interplay of phasal polarity, scalar semantics and pragmatic considerations. The restriction of German *noch*, Serbian-Croatian-Bosnian *još*, and Mandarin Chinese *hái* to decrease context is best understood as a function

⁸See **Goldberg2019** for a usage-based theory of statistical pre-emption.

2.2 *Uses on the fringes of ‘still’*

of the options available in the each system and their respective entrenchment, rather than being due to a distinct meaning.

A closer look: scalar increases Having discussed STILL expressions in the context of decreases, I now turn to the opposite, namely limited increases along some scale. The Tunisian Arabic example (3), repeated below, is an illustration.

(3) Tunisian Arabic

W-xallā-hū-l-hum *w-humma māzāl-u*
 and-leave₁_behind.PFV.3SG.M-3SG.M-to-3PL.M and-3PL.M still-3PL.M
mā-bilg-ū-š *māzāl* *fum³r-hum* *tisf*
 NEG-reach₁_puberty.PFV-3PL.M-NEG still(.3SG.M) age(M)-POSS.3PL.M nine
³*snīn*.
 year.PL

‘Er hinterließ sie ihnen, aber sie sind noch nicht in der Pubertät, sie sind erst ungefähr neun Jahre alt. [He (father) bequeathed it (a wall) to them (the orphans), but they haven’t reached puberty yet, they are **still only about nine years old**]’ (RittBenmimoun2011, glosses by FischerEtAlTunisian)

In (3) it is the STILL expression *māzāl* alone that modifies the scalar predicate *tisf* ³*snīn* ‘nine years’. A similar case can be seen in the Ternate-Tidore example (34). This is in contrast to French *encore*, which requires the predicate to be modified by *ne ... que* ‘no more than’ in such instances, as illustrated in (35).

(34) Ternate-Tidore

Context: an angelic being and mother of several children wants to return to the heavens. On her first attempt of leaving, the youngest child cried and she returned to comfort it. Now she is attempting to leave for the second time.

 des effets limités.
 ART.INDEF:PL effect(M).PL limited.PL.M

‘A year after its promulgation the law for [economic] growth still shows only limited effects.’ (found online, glosses added)

The requirement for an overt restrictive marker constitutes a parameter of significant variation across expressions and, by extension, across languages. Out of a total of 17 expressions (21 if including problematic cases) that are attested in increase contexts, this prerequisite appears to be found with only four items, namely English *still*, French *encore*, as well as German *noch* and Serbian-Croatian-Bosnian *još* (in their emphatic variants *immer noch/noch immer* and *još uvek~još uvijek*).⁹ With the limitations of my sample data in mind, this suggests that the need to overtly specify ‘still only’ is far from the norm in the world’s language. What is more, even with those expressions that normally require such an addition, exceptions may be found. Thus, as Ippolito2004 (Ippolito2004, Ippolito2007) points out, some speakers of English allow for bare *still* in the context of a limited progress of time; see (36). Which contexts require preferably go along with an overt restrictive marker, or even require one, in the case of each expression is a question to be addressed in future research.

- (36) A: *Eat? It's still 10 am!*
 B: *So what? I deserve a good lunch!*
 A: *Lunch is for noon.*
 B: *Whatever.* (online example, cited in Ippolito2007)

Somewhat comparable to what I discussed above for decrease context and additional ‘remain’ expressions, those items that do not require an overt restrictive marker may nonetheless be combined with such an operator to make the direction of change more salient. For instance, Spanish *todavía* follows the French pattern in (37), but can also be used on its own in the relevant contexts, as in (42) below.

⁹Outside of my sample, vanderAuwera1993 and Vandeweghe1992 report ‘still only’ collocations for Hungarian (*még csak*) and Dutch (*nog maar, nog slechts*).

2.2 *Uses on the fringes of 'still'*

- (37) Spanish

Pedro todavía tiene solo cien libro-s.
 P. still have.3SG only hundred book-PL

'Pedro still only has a hundred books.' (Garrido1992, glosses added)

Against this backdrop, two expressions require a bit of discussion. The first is Mateq *bayu*, illustrated in (38). The inclusion of this item in my sample is tentative. As I lay out in more detail in Section 3.4.3, *bayu* appears to lexicalize phasal polarity STILL together with a restrictive operator, a combination from which its use in scalar increase contexts falls out naturally.

- (38) Mateq

Bayu aroq=nq panèi nyidoq.
 still beginning=POSS.3 clever speak

'He'd only just begun to speak well (lit. it is still only his beginning ...).'
 (Connell2013)

The second item worth discussing is Ruuli *kya-*. The one clear-cut example of an increase with non-exhaustive alternatives in the sample data is (39), which features the perfective aspect inflection. In Ruuli, as in two other Bantu languages in my sample, the STILL-plus-perfective frame itself has developed a 'thus far only' use (Section 3.4.3). Roughly comparable to the case of Mateq *bayu*, this function is compatible with an ordered set of alternatives, but does not require one. That is to say, (39) could be subsumed under the 'thus far only' use of *kya-*.

- (39) Ruuli

ka-ab-e ka-tandika oku-soma.
 SUBJ.NCL12-go-SBJV SUBJ.NCL12-start NCL15(INF)-read

'Long ago, before they brought these nurseries, [when] a child has only stopped breastfeeding, it would go and start studying.'
 (RuuliCorpus, glosses added)

Examples (39) brings me to the last point. In contexts of a potential increase one sometimes encounters attestations with an anterior viewpoint. Example (40) is another illustration.

2 Temporal and aspectual uses

(40) English

Harry has still only fed the cat (he has not performed greater kindness).
 (Michaelis1993)

Importantly, all comparable instances that I am aware of feature some sort of restrictive operator. The latter may be overt, as in (40), or be built into the expression (or its collocation with a specific inflectional paradigm) itself, as in the Mateq and Bantu cases. Whatever its status, the restrictive operator can be said to conciliate the anterior aspect with the concept of STILL. If one assumes that the anterior viewpoint denotes a state, then having fed the cat is invariable (e.g. Parsons1990) and therefore incompatible with STILL (Section 1.4.1), but having *only fed* it can be subject to change (Michaelis1993).

Discussion: scalar increases I now turn to the semantics and pragmatics underlying the use of STILL expressions in increase contexts. It is opportune to start this discussion by taking another look at those cases involving an additional restrictive marker, as in (41), which is a condensed version of (35) above. Here, the predicate ‘have limited effects’ lies in the scope of restrictive *ne ... que* ‘no more than’.

(41) French

La loi n-’a encore que des effets limités.
 ART.DEF:SG.F law(F) NEG-have.3SG still than ART.INDEF:PL effect(M).PL
 limited.PL.M

‘The law still shows only limited effects.’

The semantics at play in instances like (41) are, of course, fully compositional. By means of the restrictive operator the truth of all propositions containing values higher than the focus denotation are explicitly negated. In (41) such alternatives include, for instance ‘shows noteworthy effects’ or ‘changes everything’. Crucially, in the evoked discontinuation scenario, the negative component of the restrictive operator falls under the scope of negation itself. The two negations cancelling each other out, this yields the requirement for a truthfully applicable higher value (Garrido1992; Vandeweghe1992). In other words, any possible development must involve an upward movement on the scale. The same logic can be applied to instances like (3, 34) above or (42), which do not feature an overt restrictive marker. Here, the question under discussion, such as the cumulative impact of the CoVid19 pandemic in (42), only allows for a maximal reading of

2.2 *Uses on the fringes of ‘still’*

the respective scalar value.¹⁰ That is to say, these cases can be understood as involving a contextually enriched semantic representation.

(42) Spanish

En las áreas francófonas, anglófonas y territorios ligados a los Países Bajos del Caribe es Trinidad y Tobago uno de los países más afectados,

‘Within the francophone, anglophone and Dutch territories of the Caribbean, Trinidad and Tobago is one of the countries hit the hardest [by the CoVid19 pandemic]’

pero con todavía unos modest-o-s 51 caso-s y
 but with still ART.INDEF:PL.M modest-M-PL 51 case(M)-PL and
sin muerte-s.

without death-PL

‘but with still only some modest 51 cases and no casualties.’
 (found online, glosses added)

Support for this interpretation comes from the fact that the more straightforward decrease reading seems to be the default interpretation of the relevant items, unless there are contextual indications to the contrary (see Garrido1992 on Spanish). Whether or not a language allows for such contextual enrichment appears to be an arbitrary, and perhaps gradual, choice. Crucially, however, there is again no need for assuming a fundamentally distinct semantics of the STILL expressions themselves.

Discussion: a brief conclusion Given the extent of the preceding exposition and discussion, a short summary is called for. Based on the sample data, I have argued that scalar contexts do not involve a distinct use, at least in semantic terms. Instead, they can be explained through a combination of phasal polarity, scalar semantics and pragmatic considerations. In some cases, intra-systemic constellations play an additional role in the interpretation and combinatorial possibilities. From a purely structural point of view, it could, however, be argued that the cases of German *noch* and Serbian-Croatian-Bosnian *još* are distinct from the garden-variety of phasal polarity. In addition, my discussion has illustrated several usage patterns that build on phasal polarity plus scalar variables, and I have highlighted parameters of variations across expressions and languages, such as the requirement (or absence thereof) of an additional restrictive ‘only’ marker in contexts of a limited increase.

¹⁰Garrido1992 speaks of a “cognitive frame ... that includes the increase direction of the process.”

2 Temporal and aspectual uses

2.2.3 ‘Thus far always/everyone’

Introduction One item in my sample, German *noch*, forms part of an idiomatic and schematic construction that signals the persistence of a generic rule ‘thus far always’ (Appendix D.3.1.3.2). As far as its formal make-up is concerned, this construction consists of *noch* as a focus particle, the associated constituent of which contains a universal quantifier, and whose host clause features either the periphrastic anterior or the synthetic past tense. Example (43) is an illustration.¹¹

(43) German

Wie **jed-es** **Jahr** **noch** war die
 as every-NOM.SG.N year(N) still COP.PST.3SG ART.DEF:NOM.SG.F
 Zahl Fremd-en allmählich bis Ostern
 number(F) ART.DEF:GEN.PL stranger-GEN.PL slowly until Easter
 ge-wachs-en.
 PTCP-grow-PTCP

‘As **every year thus far**, the number of visitors had been steadily increasing towards Easter.’ (von Ompleda, *Margret und Ossana*, glosses added)

A closer look As example (44) shows, the universal quantifier may fall under the scope of an ‘almost’ type of expression.

(44) German

Ich war **noch beinahe jed-es** **Jahr** an
 1SG COP.PST.1SG still nearly every-NOM.SG.N year(N) at
 der **Fachtagung** und ich hab-e immer gross-e
 ART.DEF:DAT.SG.F symposium(F) and 1SG have-1SG always big-ACC.SG.F
 Vor-freude.
 pre-joy(F)

‘I have participated in the congress **nearly every year so far** and I always look forward to it.’

Lastly, unlike what (43, 44) may suggest, the focus need not have a temporal meaning. In (45) it is a masculine form of *jeder* as generic ‘everyone’.

¹¹This construction also features famously in the Cologne dialect saying *Et hätt noch emmer joot jejange* ‘Thus far it has always worked out (i.e. don’t worry, everything will be just fine).’

2.2 *Uses on the fringes of 'still'*

(45) German

Sterb-en kann nicht so schwer sein. Das hat noch
 die-INF(N) can.3SG NEG so difficult COP.INF 3SG.ACC.N have still
jed-er ges-chaff-t.
 every-NOM.SG.M PTCP-achieve-PTCP

‘Dying can’t be that difficult. **So far everyone** has achieved it.’

Discussion Perhaps the most straightforward explanation for the collocation in (43–45) is that it involves the coercion of an experiential state into a transient property of the subject. This semantic shift, in turn, is aided by focus on the universal quantifier as a signal that the common ground contains less encompassing alternatives. In other words, while the fact that some situation has occurred regularly is normally an invariably state-of-affairs and therefore incompatible with **STILL** (Section 1.4.1), it is here portrayed as a state that might come to an end. In more applied terms, it is conceivable that the construction draws on analogy from two sources. The first are ‘so far, never ever’ statements, as in (46), where *noch* features as a compositional part for the expression of NOT YET. These are semantically unproblematic and find cross-linguistic parallels, for instance in the Spanish example (47).

(46) German

Das hat noch niemand ge-schaff-t.
 3SG.ACC.N have.3SG still nobody PTCP-achieve-PTCP
 ‘**As of yet, nobody** has ever achieved that.’ (personal knowledge)

(47) Spanish

Gan-ar ... donde todavía no lo ha conseg-uido nadie
 win-INF where still NEG 3SG.ACC.M have.3SG achieve-PTCP nobody
 ‘To win ... where **nobody has ever yet** ...’
 (found online, glosses added)

A second source for analogy involves the **ALREADY** expression *schon*. This item forms part of a fixed phrase *schon immer* ‘since ever’, lit. ‘already always’ (KoenigEtAl1993; MetrichFaucher2009); see (48a). This complex adverbial phrase is most likely derived from *schon* in the context of a scalar increases, more specifically, increases in the duration of a time-span, as in (48b).

(48) German

2 Temporal and aspectual uses

Table 2.3: Continued iteration/restitution

Macro-Area	Language	Expression	Appendix

'It's been like this since ever.'
- b. *Ich wart-e schon (seit) zwei Stund-en.*
1SG wait-1SG already since two hour-PL
'I've been waiting for two hours (already).' (personal knowledge)

2.2.4 Continued iteration/restitution

Introduction In this subsection, I briefly turn to the use of **STILL** expressions to signal the continuation of a series of repetitions ('yet again'). Example (49) is an illustration. Here, the Martuthunira adverb *ngartil* marks the recurrence of the people's chasing the boomerang, and the **STILL** expression *waruul* highlights the persistence of a series of repetitions.

(49) Martuthunira

Context: a man has thrown a boomerang several times, and each time a group of people has tried to catch it.

Ngartil thawu-lalha. Ngartil waruul-purtu ngunhu-ngara yanga-lwala.
again send-PST again still-COMP that.NOM-PL chase-PURP:DS
'Again he send it, and yet again they chased it.' (Dench1994)

Note that instances like (49) differ from the iterative and restitutive uses which I discuss in Section 2.4.2.1, in that in the latter instances it is the **STILL** expression itself that contributes the repetitive event construal.

Distribution in the sample and a closer look Table 2.3 list the five expressions in my sample that have the 'yet again' use. This overview is, however, rather

2.2 *Uses on the fringes of ‘still’*

tentative. On the one hand, there might be more relevant cases. Thus, in Section 2.4.2.1 I point out that ‘again’ uses of STILL expressions are often accompanied by another item indicating repetition, and it is possible that some of those collocation involve the notion of continued iteration/restitution. On the other hand, with two expressions in Table 2.3, their inclusion is far from settled. The first of these is Plateau Malagasy *mbola*, which

can accompany a predicate modified by the ambimodal marker *indray*, a marker of iteration. Its presence introduces an additional nuance of meaning that is difficult to render in French (Dez1980)¹²

I found only a single translated example of *mbola* plus *indray* in the literature, which is given in (50). If I understand Dez1980’s (Dez1980) parenthetical remarks correctly, *mbola* here adds the notion of ‘once more’ to the iterative meaning contributed by *indray*, i.e. it is at raining for at least the third time in a row.

(50) Plateau Malagasy

(*Mbola*) *avy indray ny orana.*
still come again DET rain

‘Il pleut encore une fois, la pluie tombe encore (une nouvelle fois)’ [It’s raining **once again**, it is raining again (once more)]
(Dez1980, glosses added)

The second unclear case involves Gooniyandi =*nyali*. This expression is attested with *ngambiddi* ‘again’ as its host, but the function of this collocation is not always clear. In some cases, it is related to =*nyali* in another function, namely as ‘always’, with the two items combining to signal “daily iterative occurrences of processes such as shaving” (McGregor1990). In other cases, the contribution of this collocation is much harder to determine. For instance, what is at stake in the narrative excerpt in (51) is the third occurrence of people catching a crocodile. This suggests that =*nyali* here serves to indicate that the iteration of successful hunts (signalled by *ngambiddi*) did not come to its conceivable end. However, based on the limited data, it is hard to make any definite conclusions. SchultzeBerndt2002 reports personal communication from William McGregor that *ngambiddi*=*nyali* is idiomatic and might be undergoing lexicalization.

¹²In the original French, “peut accompagner un prédicat déterminé par le marqueur ambimodal *indray*, marqueur du renouvellement de l’action. Sa présence introduit une nuance de sens complémentaire malaisée à rendre en français.”

2 Temporal and aspectual uses

- (51) Context: hunters have pulled in one crocodile and killed it, then pulled in a second one and also killed it.

Yaanya / ngambiddi=nyali ridd-widi / gard-biddini
 other again=still pull-3PL:catch hit-3PL:hit
 'Then they pulled yet another in and killed it.' (McGregor1990)

Discussion On a conceptual level, the combination of STILL and repetition is straightforward: the notions of persistence and a conceivable discontinuation here apply not to an individual situation, but to an overarching series of recurrences. At the same time, the continued iteration/restitution use is far from universally attested in my sample and it is clearly unavailable with expressions such as Swahili *bado*; see (52). Due to this arbitrary nature, it is best understood as a function of its own, distinct from phasal polarity *sensu stricto*.

- (52) Swahili

A-li-i-fanya bado tena.
 SUBJ.NCL1-PST-OBJ.NCL9-do still again
 (intended: 'He did it yet again.') (Ponsiano Kanijo, p.c.)

2.2.5 Sameness

Introduction In this subsection, I briefly address uses pertaining to a notion of identity, or 'the same'. Such functions have been described for two sample expressions, Creek (i) *monk* and Udihe *xai(si)* (Appendices E.2.1.3.2, D.16.1.3.2). Example (53) illustrates (i) *monk*. Here, this item signals that the dances remain unchanged across times, and despite the Muskogee Nation's involuntary relocation.

- (53) Creek

Context: according to customs they would have fasts and

opánka o:c-ít foll-atí-n o:m-â:t
 dance have-ss go_about.PL-HAPPEN-DS COP-REF

imóŋk-os-in foll-atí-s.

still.NMLZ-DIM-NON.SUBJ go_about.PL-DIST.PST-IND

'the same dances they used to have (lit. if they happened to have a dance, they would do it in the same way [as before])'

(HaasHill2014, glosses added)

2.2 *Uses on the fringes of 'still'*

A closer look and discussion In (53), as in all other relevant attestations of (i) *monk*, the notion of identity pertains to some quality across times. Admittedly, (i) *monk* is a borderline case of a STILL expression and might be understood as a marker of stasis or permanence (see Appendix E.2.1.2). One way or another, there is an obvious close relationship between notions pertaining to persistence and the use I discuss here. A likely link between the two functions can be found in an attestation like (54), where the temporal continuation of a state is paired with zero anaphora.

(54) Creek

Context: Turtle's wife has splattered blood in his eyes.

Itóɬwa ak-ca:t-ak-áti-t *ô·m-it hayyô·m-eys* *imóŋka-t*
 3.eye LOC-red-PL-REM.PST-SS COP-SS be_now.RES-even still.NMLZ-SUBJ
ôn-t *ô·m-i-s.*
 COP-SS COP-DUR-IND

'His eyes turned red, and they are the same way even now (lit. ... and even now it still is).' (HaasHill2014, glosses added)

The case of Udihe differs from the Creek one in two respects. Firstly, it involves a collocational pattern consisting of the STILL expression *xai(si)* plus an item from a set of anaphoric pronouns, which are characterized by initial (*u*)*t*-. Secondly, this construction is attested not only as an exponent of persistence over time, such as in (55a), but also in the context of identity with abstract referents, as in (55b).

(55) Udihe

a. *Bi abuga-i ei zulie-ni xuli: bede xaisi ute bede*
 1SG father-1SG this before-3SG go:PRS.PTCP:SS like still that like
xuli:-ni ba:-za ge-tigi-ni.
 go-3SG place-N surface-LAT-3SG

'My father still goes hunting in the same way as he used to.'
 (NikolaevaTolskaya2001)

b. Context: a man's wife has run away to escape an evil spirit. Now he has met who appears to be another woman, and she has told him her story of escaping from an evil spirit.

Merge g(une)-ini "Bi mamasa-i xai ute bi-s'e."
 hero say-3SG 1SG wife-1SG still that COP-PPV
 'The man said, "The same happened to my wife."'
 (NikolaevaEtAl2003)

2 Temporal and aspectual uses

Similar to the Creek case, however, many of the Udihe attestations allow for a transparently compositional reading. For instance, the identity of manner in (55a) most likely goes back to the notion of persistence provided by *xai(si)*, together with *ute* anaphorically pointing to the past way of hunting ‘his prior way of going, he still goes like that’. In other cases, a reading of identity can be linked to a combination of anaphora plus additive and/or iterative uses of *xai(si)*. Thus, example (55b) features the recurrence of an aforementioned situation ‘that also happened ...’. I assume that cases like (56) can be subsumed here, as well (‘also on that day’). Whether mediated by persistence, additivity or iteration, a common denominator lies in the accumulation of sub-parts of one overarching state-of-affairs.

- (56) Udihe

Bi-de xai utelinie neji-ni yene:-mi.
1SG-FOC still then day-3SG go.PST-1SG

‘I left on the very same day.’ (NikolaevaTolskaya2001)

2.3 Uses relating to other phasal polarity concepts

In this section, I discuss uses that pertain to, or infringe on, other phasal polarity concepts. More specifically, in Section 2.3.1 I lay out how STILL expressions may serve to signal NOT YET without an overt negator in certain environments. In Section 2.3.2 I take a look at the phenomenon of interrogative ‘yet’ as a link between STILL and the second affirmative concept, ALREADY.

2.3.1 ‘Still’ as ‘not yet’

Introduction The example (57) illustrates how the Swahili STILL expression *bado* may serve to signal the negative concept NOT YET in a response to a polar question without any negator.¹³ Cases like this thus constitute a manifestation of “negatives without negators” (Miestamo2010).

- (57) Swahili

A-me-kuja? – ***Bado.***

SUBJ.NCL1-ANT-come still

‘Ist er gekommen? – Noch nicht [Has he come? – Not yet].’

(Schadeberg1990, glosses added)

¹³This subsection is a condensed version of PersohnNotYet.

2.3 *Uses relating to other phasal polarity concepts*

While examples like (57) may be striking from a European perspective, one should keep in mind that STILL and NOT YET are, aside from polarity, “exactly the same … retrospectively continuative and prospectively geared towards possible change” (vanderAuwera1998).

Distribution and types Table 2.4 lists the 22 sample languages and expressions which have a use as markers of NOT YET without negation. As can be gathered, this use is found in all six macro-areas. On a more fine-grained level, the sample data indicate four types of environment in which this use is found. These are:

- (i) In the absence of an overt predicate.
- (ii) With less-than-finite or dependent predicates.
- (iii) With specific actional types.
- (iv) In a specific position relative to the predicate.

Of these contexts, NOT YET in the absence of an overt predicate is by far the most common, as it is attested in twenty languages and all six macro-areas. The rarest type appears to be the one in which polarity is a function of the position that the expression occupies within the clause; in my sample, this type is attested only in the Blagar language of eastern Indonesia. Lastly, Table 2.4 also indicates whether each expression participates in the signalling of NOT YET together with an overt negator, which is a point I return to below. In what follows, I discuss each of the four types of STILL as NOT YET separately.

A closer look and discussion: absence of an overt predicate Beginning with the most common type of STILL as NOT YET,¹⁴ namely those instances characterized by the absence of an overt predicate, several recurrent environments stand out.¹⁵ The single-most common one are negative answers to polar questions, such as in the Swahili example (57) above, or in the Xavante one in (58).

¹⁴This type is also amply attested outside of my sample. Examples on the African continent include cognates of Tunisian Arabic *māzāl* across the Maghreb (Caubet1993; Pereira2010; Tapiero1978), *əad* in the Berber variety Tarafit (Fanego2021), and *tüküna* in the Chadic language Hausa (Newman2007). Instances from Eurasia include *lissa* and *baṣd* in Levantine Arabic (MacNeillHoyt2010) and the Lao cognate of Thai *yanj*, *ñang* (Enfield2007). In Australia, the pattern is attested, *inter alia*, for Pitjantjatjara (Pama-Nyungan) *kuwaripa* (EckertHudson1988).

¹⁵As far as I am aware of, the earliest observation that these environments are unified by the lack of an overt predicate is found in MarcaisGuiga19581961’s (MarcaisGuiga19581961) glossary of the Takrouna variety of Tunisian Arabic. In a discussion of the expression *māzāl* they observe that “dans le sens de ‘pas encore’ le complexe ne peut être suivi ni d’un attribut, ni d’une proposition en asyndète” [With the meaning of ‘not yet’, the complex cannot be followed by an attribute nor by a proposition in asyndesis] (MarcaisGuiga19581961).

2 *Temporal and aspectual uses*

2.3 *Uses relating to other phasal polarity concepts*

- (58) Xavante

E ma tô a-sa? – Hadu.

Q ANT RL 2-eat still

'As-tu mangé? – (Pas) encore [Have you eaten? (Not) yet]' (Estevam2011)

In all cases that I am aware of, the question being answered pertains to whether a certain situation has been attained. In other words, the interrogative opens a choice between affirmative **ALREADY** (which may be implicit) and negative **NOT YET**. The only meaningful interpretation of a stand-alone **STILL** expression here is in relation to a negative proposition, as **NOT YET** is not only equivalent to the inner negation of **STILL** (i.e. **STILL** $\neg p$), but also constitutes the wide-scope negation of **ALREADY** (i.e. \neg **ALREADY** p); see e.g. **Loebner1989**. What is more, all relevant sample expressions also serve as signals of **NOT YET** in more complete clauses. This allows for an interpretation of the stand-alone items as elliptical versions of such more saturated clause patterns.

Closely related to the negative replies in (57, 58) are polar questions that follow a disjunctive pattern '(already) ... or still' in the meaning of '(already) ... or not yet'. An example is given in (59). Again, the only possible interpretation here is one in which the **STILL** expression takes scope over an implied negator. What is more, in four out of the six languages in question (Bukiyip, Kalamang, Thai and Tunisian Arabic), polar questions generally tend to follow a '*p* or NEG' pattern, and the constructions in question can be understood to instantiate this pattern.

- (59) Tunisian Arabic

Flān ža walla māzāl?

so_and_so come.PFV.3SG.M or still

'Ist er schon da? [Has he come yet (lit. has he come or still)?]'

(Singer1984, glosses added)

Disjunction is also at play in cases like (60). A variation on this theme is found in (61), where the situation in question and its attainment for some of the addressees, but not for others, can be retrieved from context.

- (60) Swahili

Kwa sasa ma-ji ya-me-toka m-to-ni (Malulumo)

for now NCL6-water SUBJ.NCL6-ANT-leave NCL3-river-LOC M.

na ku-fika Mgera lakini vi-jiji v-ingine bado.

and NCL15(INF)-arrive M. but NCL8-village NCL8-other still

'As for now, the water has come from the river (Malulumo) and reached Mgera, but **no other villages yet**.' (Helsinki Corpus of Swahili 2.0)

2 Temporal and aspectual uses

(61) Kalamang

Context: people are taking turns at repairing a roof.

Ma he gerket "naman=a tok?" An tok~tok an=a ming yuonin=in.
 3SG already ask who=FOC still 1SG still~REDUPL 1SG=FOC oil
 rub=NEG

‘He asked “Who hasn’t yet [taken their turn]?” I hadn’t yet, I didn’t rub oil.’ (Visser2021b, glosses added)

Sango *de*, Tunisian Arabic *māzāl*, and Western Dani *awo* also have a negation-less NOT YET use in a clause pattern consisting of a nominal subject plus STILL expression. In the case of Tunisian Arabic *māzāl*, this is restricted to *waqt* ‘time’ and other nominals referring to time spans, such as *ṣeṣf* ‘summer’ or *taṣlīm fažr* ‘first light of dawn’. The few data points for Sango *de* and Western Dani *awo*, which include (62, 63), suggest that the nominal must be associated with a telic process and/or reaching a certain point in time, such as the rainy season or plantation work. If this interpretation is correct, it links these cases to the telicity-driven alternation with Lewotobi *morə* that I discuss below. Thus, no matter whether the hearer assumes a negated predicate to be elided, or an affirmative one like ‘the river is still swelling’ or ‘the river is yet to swell’, the situation’s characteristic endpoint has not yet been reached at the time under discussion.

(62) Western Dani

Yi awo.

river still

‘The river has not yet been swelled (by the rains).’ (Barclay2008)

(63) Sango

Yaka ti gozo a-de.

plantation of cassava SUBJ-still

‘The [work on the] cassava plantation is not yet done / not yet finished.’
 (original translation: ‘... will/must be continued/finished’)
 (NassensteinPasch2021)

Lastly, STILL as NOT YET without a predicate is recurrently found in exclamations, where it often goes together with pragmatic nuances like ‘wait’, ‘hold on’, and the like; see the Wardaman example (64). Similar cases involve the notions of not being ready,¹⁶ as in the Tundra Nenets example (65). Note that this use of

¹⁶The same type of nuances are found with full-fledged NOT YET expressions, e.g. Nungon (Nuclear Trans New Guinea) *awe* (cf. Sarvasy2017) or *waluu* in the Pama-Nyungan language Yuwaalaraay (Glacon2014).

2.3 Uses relating to other phasal polarity concepts

Tundra Nenets *təmna* is slightly irregular: this marker is usually invariable, and such exclamations constitute one of only two contexts in which *təmna* can carry person-number indexes and tense marking. As in the patterns discussed before, it is likely the underspecification in polarity brought about by elliptical contexts that allows for negative readings to arise and become conventionalized.

(64) Wardaman

A: *Ngayin.gun-yonga-rri.*

3NON.SG>1DU.INCL-farewell-PST

‘They’ve said good-bye to the two of us.’

B: *Gayawun ngawun-yongi-we!*

still 1SG>3NON.SG-farewell-FUT

‘Hang on! I have to say goodbye to them!’ (Merlan1994)

(65) Tundra Nenets

Təmna-d^om-c^o

still-1SG-PST

‘I wasn’t ready yet.’ (Nikolaeva2014)

Unsurprisingly, there appears to be a correlation between the STILL-as-NOT YET use in the absence of a predicate and the wordhood of the expressions involved. Nearly all cases involve independent grammatical words or bound roots. The only cases of affixes in my sample are Bende *syá-* and Ruuli *kya-*. In these instances, the lexical slot is filled by a copula verb, as illustrated for Ruuli *kya-* in (66).

(66) Ruuli

li-kya-li.

SUBJ.NCL5-still-COP

‘They operated me this one, **this one, not yet**’

(RuuliCorpus)

vanBaar1997, the first author to discuss some of the relevant instances from a cross-linguistic angle, postulates the two-part implicational universal in (67).

2 Temporal and aspectual uses

(67) vanBaar1997's (vanBaar1997) STILL-as-NOT YET universal

- a. If a STILL expression is used as an isolated expression, it is invariably used for the expression of NOT YET.
- b. Examples are only found in those languages which have an internal negation of the relevant STILL expression.

As can be gathered, vanBaar1997 only concerns himself with STILL expressions as pro-sentences. According to (67a), these invariably yield NOT YET. However, counterexamples are readily found in the sample. For instance, English *still* and Modern Hebrew *sadayin* have conventionalized functions as concessive interjections (Section 3.5.2.3).¹⁷ As for the second part of the universal, (67b) predicts that isolated STILL as NOT YET should only be found with markers that are also involved in signalling NOT YET by taking scope over a negator. This is also contradicted by several cases in my sample. In the two Bantu languages Bende and Ruuli NOT YET is expressed via STILL plus infinitive, not negation. With Blaggar (*y*)*edung*, the combination with negation is marginal, at best, and it is the position relative to the predicate that determines the item's interpretation as STILL or NOT YET in full clauses. Pending further cross-linguistic work, (67b) may best be understood as a tendency rather than an absolute universal. The strongest absolute implicational universal supported by my sample data is the one in (68).

- (68) In STILL as NOT YET expressions, the absence of an overt predicate (encompassing "isolated" uses) is only found with expressions that –in one way or another— also participate in the formation of NOT YET with overt predicates.

A closer look and discussion: less than finite predicates The second type of STILL as NOT YET, the collocation with a less-than-finite complement, is illustrated in (69) for Manda (*a*)*kona*.

- (69) *N-ákóna ku-líma ng'vnda w-ángu.*
 SUBJ.1SG-still NCL15(INF)-cultivate NCL3.plot NCL3-POSS.1SG
 'I have **not** cultivated my plot yet.' (Bernander2021)

Other sample expressions that occur in such collocations are Swahili *bado*, Bende *sya-*, and Ruuli *kya-*; being prefixes, the latter two require a copula verb in these instances. More generally speaking, STILL plus infinitive is a recurrent NOT YET device in Bantu (Nurse2008; VeselinovaDevos2021). As pointed out before

¹⁷To vanBaar1997's credit, possibly he only had phasal uses in mind.

2.3 Uses relating to other phasal polarity concepts

me by **Gueldemann1996** (**Gueldemann1996**, **Gueldemann1998**), **Nurse2008** and **VeselinovaDevos2021**, the conventionalization of this function involves only a very short conceptual leap: the persistence of a negative situation is a straightforward inference from a persistently unactualized one like 'still to cultivate my plot'. The same explanation probably applies to variations on this theme outside of my sample. Thus, in another Bantu language, Kagulu, the item *ng'halī-ngh'ati* signals NOT YET with infinitival complements, as well as with verbs in the subjunctive mood inflection (**Petzell2008**). Across Bantu, this less-than-finite verbal paradigm comes close to what **Timberlake2007** terms "an all-purpose mood used to express a range of less-than-completely real modality".¹⁸ Similarly, **deAnguloFreeland1930** report that *nám* in the Palaihnihan language Achumawi signals NOT YET when it is combined with the subordinate form of the verb. These additional data points suggest that STILL as NOT YET with less than finite and/or dependent predicates may be more widespread than what the sample data suggest.

A closer look and discussion: actional characteristics With two items in my sample, polarity is a function of the predicate's actional characteristics (the situation's internal make up; see Section 1.6.3). The first is Lewotobi *morə̃*. This expression signals STILL with atelic predicates, as shown in (70a). With telic predicates, on the other hand, *morə̃* marks NOT YET; see (70b). Predicates that allow for both construals are ambiguous without further context; this is illustrated in (70c).

- (70) Lewotobi
- a. *Go mahasiswa morə̃ di.*
1SG student still DM:excuse
'I am still a student (so I am not married).'
 - b. *Go kriə̃ waha morə̃.*
1SG work finish still
'I haven't finished working yet.'
 - c. *Go kə̃ morə̃.*
1SG eat.1SG still
'I am still eating / I haven't eaten [a meal] yet.'
(Nagaya2012)

The two functions of *morə̃* can be conciliated by assuming that this expression emphasises the prospective component of STILL. With telic predicates, this change corresponds to their defining point of culmination.

¹⁸See **RoseEtAl2002** for an overview.

2 Temporal and aspectual uses

In diachronic terms, there are several reasons to assume that *morə* started out as signalling STILL. First, *morə* also marks NOT YET in conjunction with negated predicates, which can be resolved compositionally as STILL $\neg p$. Secondly, its apparent cognate *muri'* in closely related Lamaholot is an additive and iterative marker (NishiyamaKelen2007; Pampus2010), two functions that are notionally close to the concept of STILL. What is more, a diachronic shift from STILL to NOT YET in the context of telic predicates is highly motivated from a semantic point of view. This requires some elaboration. Based on Vendler1957's (Vendler1957) famous classification, one can distinguish between two major types of telic predicates. These are the telic processes known as "accomplishments" and near-instantaneous changes or "achievements". With accomplishment predicates, a construal of a persistent process such as 's/he's still building a house' entails that the point of culmination has not yet been reached at the time under discussion. The gap to NOT YET is even narrower with achievements, as these cannot be persistent in time. Though this clash could be resolved via a construal in which the STILL expression takes wide scope over a prospective or modal operator (something akin to 's/he'll arrive yet'), this would also entail that the telos has not been attained at topic time. In a nutshell, there is an affinity between telic predicates and NOT YET. A conceivable catalyst for this development just outlined can be found in the fact that Lewotobi has neither grammatical tense nor grammaticalized aspect distinctions,¹⁹ thereby allowing for the same bare predicate to be construed with an imperfective viewpoint or with a perfective/anterior one, as in (70c).

The second sample expression that displays a polarity alternation based on the predicate's actional class is Nyangbo *ka-*. With this prefix, the dividing line runs between stative and dynamic predicates. In the default form of the verb, which lacks overt marking of aspect, *ka-* plus stative predicate yields STILL; see (71a). Dynamic predicates, on the other hand, go together with NOT YET and a perfective viewpoint, as in (71b). In order for dynamic predicates to be construed as persistent processes, a progressive marker needs to be added; see (71c).

- (71) Nyangbo

- a. Context: three friends had agreed to meet at the roadside to catch a bus. Two of them met, waited for a bit and then one of them called the third friend on his cell phone. He reports:

¹⁹Lewotobi does have a marker termed "perfective" by Nagaya2012 but the description and available examples suggest that this is rather a *iamative*, i.e. a specific type of *ALREADY* expressions (see Olsson2013). What is more, it occupies the same position in the clause as *morə*. Both facts suggest that the two items are in complementary distribution.

2.3 *Uses relating to other phasal polarity concepts*

- A-ka-lé* *bɔ-pá̄-m.*
 SUBJ.3SG-still-be_at NCL-house-inside
 ‘He is still at home.’
- b. *A-ka-také* *siká̄.*
 SUBJ.3SG-still-pick money.
 ‘He hasn’t collected the money yet.’
- c. *A-ka-á-také* *siká̄.*
 SUBJ.3SG-still-PROG-pick money.
 ‘He is still collecting the money.’
- (Essegbey2012; James Essegbey, p.c.)

Similar to the case of Lewotobi *morɔ̄*, the two readings can be conciliated by assuming that *ka-* places special emphasis on the prospective view towards the situation’s end. That stative verbs are the odd ones out can be linked to a peculiarity of the language’s aspect system. Thus, in Nyangbo, the default form of the verb is what West Africanists term a “factative”. Factatives have an ongoing state reading with stative verbs,²⁰ but signal a situation that has passed with all other predicates (Welmers1973). This split in temporal-aspectual interpretation is preserved when *ka-* is added.

A closer look and discussion: linear position The fourth and last flavour of STILL as NOT YET is found with Blagar (*y*)*edung*. This item marks STILL when it occupies the pre-predicate position of the clause, as in (72a). When it occurs after the predicate, on the other hand, it serves as an expression of NOT YET, as shown in (72b).

- (72) Blagar
- a. *Qangu veng qangu na jedung kiki.*
 at_that_time SUBJ.1SG still small
 ‘At that time I was still a little child.’
 (SteinhauerGomang2016, glosses added)
- b. *N-iva guru jeduŋ.*
 POSS.1SG-mother teacher still
 ‘My mother isn’t a teacher yet.’ (SteinhauerBlagar)

²⁰Or those labelled as “stative”; see Ameka2008 for a problematization of this term with reference to Ewe, as well as CranePersohn2019 for a discussion of similar facts across Bantu.

2 Temporal and aspectual uses

To all appearances, this behaviour of (y)edung is shared by the relevant markers in two of the neighbouring and closely related Alor-Pantar languages, Nede-bang and Teiwa. In all likelihood, this is related to the fact that the post-predicate position is the locus of clausal negation in these languages. In diachronic terms, a comparison with the third neighbour, Reta (Willemsen2020) suggests that this pattern goes back to a pattern of embracing negation [NEG *p* NEG]. This pattern was analogously applied to the signalling of NOT YET via [NEG *p* STILL]. The dropping of the initial negator ultimately led to clause-final (y)edung as the sole exponent of NOT YET.

2.3.2 ‘Still’ and ‘already’, or interrogative ‘yet’

Introduction In this subsection, I discuss the link between STILL expressions and the second affirmative phasal polarity concept, ALREADY. More specifically, I focus on a phenomenon known as interrogative ‘yet’ (vanderAuwera1993, vanderAuwera1998). The latter consists in using the non-negative component of a polymorphemic NOT YET expression in indirect and/or direct questions. Illustrations are provided in (73) for the phenomenon’s namesake, English *yet*.

- (73) English
- a. Indirect question
I doubt that Fred has arrived yet.
 - b. Direct question
Has Fred arrived yet?

While English *yet* has ceased to be a bona fide STILL expression, interrogative ‘yet’ is also attested for cases that continue to serve as such. Example (74) is an illustration featuring French *encore*.

- (74) French
- Context: speaking of a house that is only heated intermittently.
- Je me demande s'il fait encore assez chaud dans la maison.*
1SG REFL.1SG ask.1SG if-3SG.M make.3SG still sufficient heat in ART.DEF:SG.F house(F)
- ‘I wonder whether the house is sufficiently warm yet.’
(Martin1980, glosses added)

In (73, 74), the meaning of *yet* and *encore* approaches that of ‘already’. Unsurprisingly, some language make use of ALREADY expressions in the same contexts,

2.3 *Uses relating to other phasal polarity concepts*

as illustrated in (75) for the German counterpart to (74). What is more, below I discuss how the use of a **STILL** expression as interrogative ‘yet’ may ultimately lead to its reanalysis as an **ALREADY** marker.

(75) German

<i>Ich frag-e mich, ob es i-m</i>	<i>Haus</i>
1SG ask-1SG REFL.1SG whether 3SG.N in-ART.DEF:DAT.SG.N house(N)	
<i>schon warm genug ist.</i>	
already warm enough COP.3SG	
‘I wonder whether the house is sufficiently warm yet.’	
(personal knowledge)	

Distribution in the sample (and beyond) Table 2.5 gives an overview of the known attestations of the phenomenon, based on the sample data and previous studies, with the sample languages highlighted in grey.²¹ For each marker, Table 2.5 also indicates it synchronically functions as **STILL** expressions and whether the interrogative ‘yet’ function is available in indirect and direct questions. As can be gathered, the phenomenon has primarily been reported for languages from Europe, though not exclusively so. In my sample, cases from outside of Europe involve Thai *yai* and Slave *k’ála*. On a more fine-grained level, it is noteworthy that the use in direct question entails that in indirect ones, as previously observed for Europe by *vanderAuwer1998*.

In what follows, I first discuss a diachronic pathway that has been proposed by *vanderAuwer1998*. I then turn to the case of Thai *yai*, the function of which as interrogative ‘yet’ is closely interwoven with its use as NOT YET without a negator (see Section 2.3.1).

A closer look and discussion: the subordination scenario As I pointed out initially, interrogative ‘yet’ is a phenomenon that is primarily related to NOT YET. However, the vast majority of known instances involve cases where this negative concept is expressed via a **STILL** expression taking scope over a negator; this includes English *yet*, which used to be a marker of persistence before it

²¹For languages outside the sample, see *vanderAuwer1993* (*vanderAuwer1993*, *vanderAuwer1998*), *vanBaar1997*, *Vaelikangas1982*, and references therein. *vanBaar1997* additionally lists Hausa *har yànzú*. This marker should not be considered a phasal polarity expression, but is a transparent combination of temporal deixis and inclusion ‘up to including now’ (*Ziegelmeyer2021*). Note that I did not actively look for interrogative ‘yet’ with items that do not synchronically serve as a **STILL** expression. It is therefore possible that the phenomenon is found in more of my sample languages.

2 Temporal and aspectual uses

ⁱⁱ Listed by vanderAuwerla1998 only with reservation.

ⁱⁱⁱ With limitations; see discussion below.

2.3 Uses relating to other phasal polarity concepts

became superseded in this function by *still* (Koenig1991; KoenigTraugott1982). Against this backdrop *vanderAuwera1998* observes an implicational universal in his sample of European languages, namely that interrogative ‘yet’ in direct questions unilaterally entails the same function in indirect questions. Based on this observation, he suggests a chain-wise development that starts in marking NOT YET via STILL plus negation, specifically in subordinate contexts. Subsequently, negative raising creates a syntactic separation between the two components of the complex NOT YET expression, which leads to the STILL expression getting associated with non-assertive contexts. This structural pattern is then carried over to indirect questions that are biased towards the negative. The now narrow gap to direct questions finds an additional bridge in indirect inquiries of the type ‘I would like to know, whether...’. This scenario is schematically illustrated in Figure 2.1.

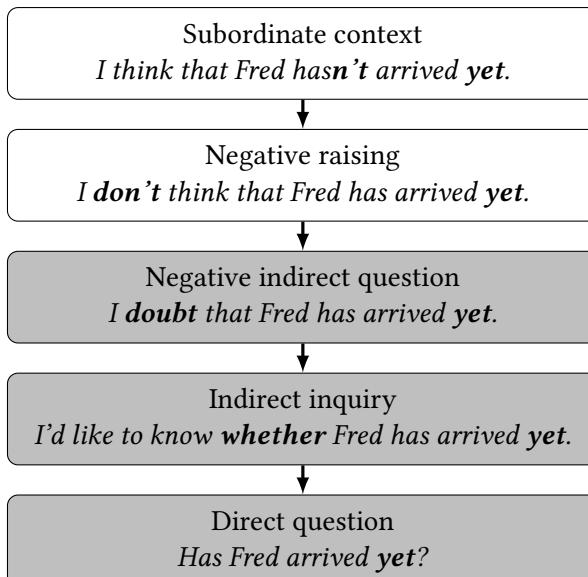

Figure 2.1: *vanderAuwera1998*'s (*vanderAuwera1998*) subordination scenario. Arrows depict feeding relationships.

In my sample, the two Spanish expressions *aún* and *todavía* have progressed only to the stage of negatively oriented indirect questions. Both items are illustrated in (76).

(76) Spanish

2 *Temporal and aspectual uses*

- a. *Dud-o que h-aya nac-ido todavía*
 doubt-1SG SUBORD have-SBJV.3SG be_born-PTCP still

cojon-es para hac-er-lo.
 testicle(M)-PL for do-INF-3SG.ACC.M
 'I doubt that the person with big enough balls to do so has been born yet.' (Montaño, *Andanzas*, cited in RAEGramatica, glosses added).
- b. *Cré-an-me, no hay político ... superior ... en*
 believe-SBJV.3PL-1SG.OBJ NEG EXIST politician superior in
este siglo, y dud-o que haya
 PROX.SG.M century(M) and doubt-1SG SUBORD have.SBJV.3SG
nac-ido aún.
 be_born-PTCP still
 'Believe me, there is (currently) no better politician ... in this century ... and I doubt that one has been born yet.' (found online, glosses added)

On the other hand of the spectrum, having taken the development even further than the scenario in Figure 2.1, lies Lezgian *hele*. The comparative evidence on this marker strongly points towards STILL as its original function (vanderAuwera1993, vanderAuwera1998). In addition, *hele* combines with negation to signal NOT YET, as shown in (77a). Furthermore, it is attested in negative indirect and direct question contexts; see (77b, 77c).

- (77) Lezgian
- a. *Am naq' nisini-q^h wac'a-l fe-na, hele xta-nwa-č.*
 3SG.ABS yesterday noon-at river-to go-AOR still return-ANT-NEG
 'He went to the river yesterday at noon, and he hasn't returned yet.'
- b. *Zun JusufDerbentd-aj hele q^hfe-nwa-j-da-l*
 1SG.ABS J. Derbentl-out_of still leave-ANT-PTCP-NMLZ-on
šaklu že-zwa.
 doubting COP-IPFV
 'I doubt whether Jusuf has left Derbent yet.'
- c. *JusufDerbentd-aj hele q^hfe-na-ni?*
 J. Derbentl-out_of still leave-AOR-Q
 'Has Jusuf left Derbent yet?' (Haspelmath1991)

2.3 Uses relating to other phasal polarity concepts

What stands out about *hele* is that its original function as a STILL expression is presently only realized when it reinforces another item, the affix -(C)*ma*, as in (78a). Its primary affirmative function in the present-day language pertains to ALREADY; see (78b). Crucially, the contribution of *hele* to marking NOT YET is compatible with both concepts, in that NOT YET *p* is tantamount to STILL $\neg p$ and to \neg ALREADY *p*, with the sole difference lying in the scope of the negator. Given this logical equivalence, as well as the fact that interrogative 'yet' is notionally very close to ALREADY, the most parsimonious explanation is that the latter use has led to the reanalysis of *hele* as an ALREADY expression (vanderAuwer 1998).

(78) Lezgian

- a. *Am fadlaj pensijadi-z eqeč'-na k'an-zawa-j-di ja,*
3SG.ABS long pension-DAT go_out-AOR must-IPFV-PTCP-NMLZ COP
amma am hele k'walaxa-l xü-zma.
but 3SG.ABS still work-on keep-IPFV.still
'He ought to have retired long ago, but they're still keeping him at work.' (Haspelmath 1991)
- b. *Jusuf Derbent.d-aj hele qʰfe-na.*
J. D.-out_of still/already leave-AOR
'Jusuf has already left Derbent.' (Haspelmath 1993)

Outside of western Eurasia, a development comparable to vanderAuwer 1998's (vanderAuwer 1998) scenario appears to have occurred with Slave *k'ála*. Examples (79a, 79b) illustrate this item as interrogative 'yet' in direct and indirect questions, respectively.

(79) Slave

- a. *Sú k'ála shétenj?*
Q still SUBJ.2SG.eat
'Did you eat yet?' (Rice 1989)
- b. *Sú k'ála 'elá ráyéhdí hjsi.*
Q still boat SUBJ.3: bought uncertainty
'I wonder if s/he bought a boat yet.' (Rice 1989)

It is conceivable that the use of *k'ála* as interrogative 'yet' was mediated by a surface scope ambiguity in examples like (80). Here, this item is lineally separated from the negator *yile* and could potentially be parsed as either a preposed part of the matrix clause, or as belonging to the complement clause. Alternatively, it might be that the relevant instances represent an older 'up to now' meaning.

2 Temporal and aspectual uses

- (80) Slave

K’ála rídenéwé gu kodishq yile.
 still SUBJ.3:arrived whether SUBJ.1SG:know NEG
 ‘I didn’t know if it came (by air) yet.’ (Rice1989)

The last point brings me to the case of French *encore*. In the present-day language, *encore* as interrogative ‘yet’ is restricted to indirect questions, such as in (74) above. In older lects, however, it was also found in direct questions; see (81).

- (81) Old French, mid-12th century

Est, va, encore toz mes charroiz entr-ez?
 COP.3SG DM still all.PL POSS.1SG:PL car.PL enter-PTCP.PL
 ‘Say, have all my carts entered yet?’ (MosegaardHansen2008, glosses added)

As MosegaardHansen2008 points out, attestations like (81) most likely constituted a relic usage that goes back to the origins of *encore* in a Latin phrase ‘until now, thus far’. This begs the question of where the present-day function in indirect questions comes from. Possibly, it constitutes the renovation of a once lost function, thereby conforming to vanderAuwera1998’s scenario. However, it is equally conceivable that negative raising, as in (82), did not strictly feed into indirect questions, but instead provided motivation for the retention of a function that already existed as an archaism. Future corpus-driven work will surely shed a light on this issue.

- (82) French

Mais je ne vois pas qu-’il ait encore fait
 but 1SG NEG see.1SG NEG COMP-3SG.M have.SBJV.3SG still make.PTCP
son choix d-une façon positive et
 poss.3SG:SG.M choice(M) of-ART.INDEF:SG.F manner(F) positive.F and
irrevivable.
 irrevocable.F

‘But I don’t see that he has yet made his choice in a positive and irrevocable way.’ (Martin1980, glosses added)

A closer look and discussion: Thai *yai* In the preceding discussion I hinted at the fact that there might be more ways in which a STILL expression can come to function as interrogative ‘yet’, and in Section 2.3.1 I lay out how STILL expressions frequently serve as markers of NOT YET in certain contexts lacking an overt

2.3 Uses relating to other phasal polarity concepts

predicate. A common subtype of the latter use is found in polar questions that follow a disjunctive pattern ‘already *p* or still’. Here, an implied negator yields ‘... or not yet’. One marker used in this fashion is Thai *yan*, as shown in (83).

(83) Thai

- Thíŋ còtmǎay pai tûu praisanii léew rǔuu yan?*
 throw letter go box mail already or still
 ‘Did (you) put the letter into the mail-box or not yet?’
 (Koelver1991, glosses added)

In present-day Thai, this disjunctive question tag is undergoing erosion: in the intermediate stages either *léew* ‘already’ or *rǔuu* ‘or’ are dropped; see (84a, 84b).

(84) Thai

- a. *Léew* ‘already’ omitted
khun hâi ʔaahǎan mǎa rǔuu yan??
 2 give food dog or still
 ‘Have you fed the dog yet?’ (Smyth2002)
- b. *Rǔuu* ‘or’ omitted
Rǐak rót théksii léew yan??
 call car taxi already still
 ‘Did you call the taxi [yet]?’ (found online)

In the final stage of erosion, both *léew* and *rǔuu* are omitted, leaving *yan* as interrogative ‘yet’. This can be seen in (85).

(85) Thai

- a. *Hǐw yan?*
 hungry still
 ‘Are you hungry yet?’ (found online)
- b. *Chán sǒŋsǎi wâa khun kin khâaw yan.*
 1SG wonder COMP 2SG eat rice still
 ‘I wonder whether you have eaten yet.’ (Chingduang Yurayong, p.c.)

Not only are all steps from NOT YET to interrogative ‘yet’ directly observable, but there is an additional piece of evidence that *yan* did not follow *vanderAuwera1998*’s (*vanderAuwera1998*) subordination scenario. Thus, Thai does not make use of negative raising with *yan* (Chingduang Yurayong, p.c.); recall that this is the first step in Figure 2.1. Instead, when negation is marked on the matrix clause, the ALREADY item *léew* figures in the lower clause, as in (86).

2 Temporal and aspectual uses

(86) Thai

- Chán mâi khít wâa kháu maa (thăñŋ) léew.
 1SG NEG think COMP 3 come arrive already
 'I don't think he has arrived yet.' (Chingduang Yurayong, p.c.)

2.4 Broadly adverbial temporal-aspectual functions

2.4.1 Introduction

In this section, I survey time-related function that can be subsumed under a loosely defined label of *adverbial* notions. In Section 2.4.2 I discuss uses pertaining to repetition and in Section 2.4.3 I survey STILL expressions as markers of 'always' and related notions. In Section 2.4.4 I turn to a future-oriented 'eventually' function. In Section 2.4.5 I address uses pertaining to the broader realm of *taxis* or the relative ordering between situations. Lastly, in Section 2.4.6 I discuss functions pertaining to degrees of temporal remoteness.

2.4.2 Repetition

In this subsection I discuss uses pertaining to the domain of repetition, which I understand as encompassing two primary types of event construals. The first type, **ITERATION**, involves the complete repetition of a prior situation. A **RESTITUTIVE** use, on the other hand, involves the restoration of a prior state, thereby implying a preceding process that yielded an opposing state (FabriciusHansen1980, FabriciusHansen2001; KampRossdeutscher1994; Waelchli2006; among others). Both are shown in (87), using English *again* for ease of illustration.

(87) English

a. Iterative

Ines rang the bell once. Then she rang it again.

b. Restitutive

A sudden gust of wind blew the door shut. Rick opened it again.

Iteration as well as restitution may be signalled by STILL expressions or by larger collocations containing one. In Section 2.4.2.1 I discuss those cases in which repetition is conveyed by a STILL expression on its own. In Section 2.4.2.2, I turn to those instances where an iterative or restitutive construal involves the collocation with an event quantifier 'still one time > one more time > again'. Note that I discuss cases in which a STILL expression adds the notion of continuation to an existing repetitive construal separately in Section 2.2.4.

2.4 Broadly adverbial temporal-aspectual functions

2.4.2.1 Repetition (plain ‘still’ expression)

Introduction The Bambara examples in (88) illustrate repetition uses of a STILL expression. In (88a), *túguni* marks iteration in the form of a second occurrence of the fish speaking, whereas in (88b) it signals that letting the chicken free corresponds to the restitution of a prior state.

(88) Bambara

- a. Context: a fish spoke and was then cooked.
 $\hat{A} \quad y' \quad i \quad kánto \quad túguni.$
 3SG PFV.TR REFL speak still
 ‘The fish spoke again.’
- b. $\hat{A} \quad yé \quad syé \quad mìne \quad k' \quad à \quad bila \quad túgun.$
 3SG PFV.TR chicken catch INF 3SG let still
 ‘He caught the chicken and let it free again.’

(DombrowskyHahn2020)

Distribution in the sample Table 2.6 lists the expressions in my sample that can mark repetition. Note that, in addition to these, Gurindji =*rni* forms part of a complex enclitic =*rningan* with repetition uses (Appendix C.2.1.4.1). Table 2.6 also indicates which of the two major type of uses (iterative vs. restitutive) are attested, as well as grammatical or lexical restrictions, where applicable. As can be gathered, repetition-related uses are attested for seventeen expressions from sixteen distinct languages across all six macro-areas, making it one of the most geographically wide-spread function in my sample. This impression is also supported by an abundance of candidates not included in my sample.²² What is more,

²²For Africa, these include *nánu* and *lisusu* in the Bantu language Língala (NassensteinPasch2021), and *həma* in Chadic Lamang (Wolff2015). In Australia, -*anteye* in the Pama-Nyungan language Eastern Arrernte (Wilkins1989) is among the candidates. In Eurasia, repetition functions are found with *nog* in southern varieties of Dutch (vanderAuwera1993; vanBaar1997), its cognate *nokh* in Yiddish (vanderAuwera1991Yiddish), as well as with the Italian cognate of French *encore*, *ancora* (TovenaDonazzan2008). The CLICS³ database (CLICS3) lists, among others, Adyghe (Abkhaz-Adyge) *ðʒərəj*, Northern Kurdish (Iranian) *disa*, and *tax'iät*, *tax'iŋ* in Halk Mongolian. Candidates in North America include Central Alaskan Yupik (Eskimo-Aleut) *cali* (Amos2003; Miyaoka2012), Choctaw (Muskogean) *moma* (Broadwell2006), Plains Cree (Algic) *kéyápíc* (Wolvengray2001), and the “repetitive prefix” in the Iroquian language Seneca (Chafe2015). In Paponesia, examples from Formosan (Austronesian) are -*n?á* in Tsou and -*ay* in Atayal and Bunun (examples throughout ZeitounEtal2010). Outside of Formosan, one finds, among others, Ida'an *masong* (Goudsward2005). Examples from South America include the cognates of Southern Lengua *makham* across Lengua-Mascot (e.g. UnruhKalisch1999; UnruhEtAl2003).

2 Temporal and aspectual uses

repetition uses are found with markers of various shapes and forms (free morphemes, affixes, clitics). In what follows, I first take a closer look at the distinction between iteration and restitution, then examine grammatical and/or lexical restrictions, to ultimately discuss the notional similarities and diachronic links between phasal polarity STILL and repetitive event construals.

Table 2.6: Iterative and restitutive uses

M.-Area	Language	Expr.	Appx.	Iterative	Restitutive	Restriction(s)
Africa	Bambara	<i>túguni</i>	B.2.1.3.1	y	y	Perfective aspect inflection plus dynamic predicate
		<i>bilén</i>	B.2.2.3.1	y	y	Perfective aspect inflection plus dynamic predicate, locative copula

	S. Lengua	<i>makham</i>	G.5.1.4.1	y	y	

* Only one example in the data.

A closer look: iteration vs. restitution It is convenient to start my discussion with a brief look at the distribution of the two primary types of repetition, iteration vs. restitution. As can be gathered from Table 2.6, with sixteen expressions the iterative use is slightly more common than the restitutive one, which is attested for eleven expressions (twelve if counting unclear cases). What is more, there

2.4 Broadly adverbial temporal-aspectual functions

are several expressions in the sample that only have the iterative function (Classical Nahuatl *oc*, French *encore*, Mandarin Chinese *hái*, and Southern Ndebele *sa-*), but none that exclusively has the restitutive one. The only expression that comes close to representing the latter type is Wubuy *-wugij*, where the restitutive use is common, whereas the iterative one is rare, with only one attestation in Heath1982's (Heath1982) extensive text collection. The data thus point to the implicational universal in (89). Note that this contradicts vanBaar1997, who stipulates a closer proximity between restitution and STILL.

- (89) If a STILL expression has a restitutive use, it also has an iterative use.

On a more fine-grained level, in Gooniyandi the two relevant uses of *=nyali* are typically distinguished via the expression's syntactic host. Thus, iterative *=nyali* normally attaches to the part of the verbal predicate that denotes the repeated act, whereas the host of restitutive *=ngali* is often the constituent depicting the state or location that is restored (McGregor1990). This is illustrated in (90). An essentially parallel situation is found with the complex Gurindi clitic *=rningan*, which includes the STILL expression *=rni* as part of its composition (Appendix C.2.1.4.1). This distinction is furthermore reminiscent of what is found with German *wieder* 'again', where, in certain cases, word order has a disambiguating function (vonStechow1996).

- (90) Gooniyandi

a. Iterative

Jamoondoo milanggiddinyayi mila=nyali yawinggiddinyayi
other_day I_saw_you_two see=still I_will_extend_you_two
'I saw you two the other day, and I'll see you again.'

b. Restitutive

Niyi barnbindi ngiwawoo=nyali.
he he_returned south=still
'He returned south again.' (McGregor1990)

Lastly, Gooniyandi *=nyali* is also attested in a closely related responsive sense. Thus, in (91) this item highlights that the speaker returns another man's call.

- (91) Gooniyandi

Yoowarni-ngga baami-ngadda briyandi baa=nyali limi-nhi.
one-ERG he_called-to_me in_return call=still I_did-to_him
'One (man) called to me, and in turn I called back to him.'
(McGregor1990)

2 Temporal and aspectual uses

A closer look: combinatory differences and restrictions As I discuss below, phasal polarity **STILL** and ‘again’ have a common semantic denominator in the continuation or accumulation of time intervals, with the main difference lying in the question of homogeneity. This, in turn, has implications as far as combinatory potentials are concerned. Thus, the intermittent nature of iteration and restitution allows for such uses to combine with aspectual categories that would be incompatible with the notion of **STILL**. In the dimension of aspectual operators, this includes bounded viewpoints (e.g. perfectives and anteriors), and when it comes to the internal temporal make-up of the predicate, characteristics, this affects (near-)spontaneous situations, i.e. achievements and semelfactives. Example (92) is an illustration of French *encore* in its iterative use together with the analytical anterior, which doubles as a perfective past in the spoken language. Example (93) shows Southern Yukaghir *aj* together with the perfective aspect and an achievement predicate.

(92) French

Caroline a encore téléphoné.

C. have.3SG still call.PTCP

‘Caroline has phoned again.’

(MosegaardHansen2008, glosses added)

(93) Southern Yukaghir

Context: a man has brought the master of the earth a barrel full of spirit in exchange for fur. Now he has come a second time.

D'e tude boc'ka-gele aj køud-ej-m.

DM 3SG.GEN barrel-ACC still take-away-PFV-TR.3SG

‘He brought his barrel again.’ (NikolaevaMayer2004)

On the flipside of things, the differences in compatibilities just outlined offer a motivated explanation for several of the morphosyntactic and lexical restrictions listed in Table 2.6. While these may appear rather dissimilar at first glance, they turn out to be variations over the common theme in (94).

(94) When ‘again’ uses of **STILL** expressions are subject to morphosyntactic and/or lexical restrictions, they are barred from those constellations in which they compete with phasal polarity **STILL** (setting aside third types of uses).

Thus, in Wubuy, iterative and restitutive *-wugij* are restricted to what Heath1984 terms the “punctual” aspect. This combination is illustrated in (95). In broad

2.4 Broadly adverbial temporal-aspectual functions

strokes, the Wubuy punctual–continuous distinction is primarily an actional one. The punctual aspect is the paradigm of choice with achievements and semelfactives. When it combines with states or processes, these are converted into achievements; see **Heath1984** for more discussion. In essence then, readings of repetition are only found with non-durative situations, which cannot persist in time.

(95) Wubuy

‘He came out. He gave those guts (containing the two boys) [back] to them [people].’ (**Heath1980**)

In the case of Southern Ndebele *sa-*, illustrated in (96), the iterative use is restricted to the perfective aspect inflection. The same is true, with one minor exception, of the iterative and restitutive uses of Bambara *túguni* and *bilen*. An additional lexical constraint shared by both languages is that the uses in question are only found with predicates labelled “inchoative” (Southern Ndebele) or “stative” (Bambara) in the respective descriptive traditions. Terminological differences aside, the predicates excluded are those that have an ongoing state reading in the perfective aspect and which would hence allow for a construal of a persistent state.²³

(96) Southern Ndebele

‘The dryer shrank a shirt again (it happened another time).’

(**CranePersohn2021**)

Similar restrictions are found with Udihe *xai(si)* and Saisiyat =*nahan*, albeit as strong tendencies rather than as hard-and-fast rules. In a related manner, an

²³See **HewsonBambara** and **CranePersohn2021** for a more extensive discussion of the interaction between aspect and actionality in these languages.

2 Temporal and aspectual uses

iterative reading of French *encore* is dispreferred in the constellation of an imperfective viewpoint plus atelic predicate (MosegaardHansen2008). In Barabayiiga-Gisamjanga Datooga, the STILL expression *údu-* brings with it a neutralization of most tense-aspect distinctions to one of future vs. non-future tense. Both the aspectual viewpoint and the type of event construal are determined by the telicity of the predicate. Atelic predicates go along with an imperfective viewpoint and yield STILL. Telic predicates, on the other hand, go along with a perfective or anterior viewpoint. In the future tense and with prohibitives, this yields a reading of repetition (Mitchell2021). Broadly comparable, Mandarin Chinese *hái* only has an iterative use in reference to future states-of-affairs, as in (97).

- (97) Mandarin Chinese

Míngtiān hái huì xiàyǔ ma?

Tomorrow still will rain Q

‘Will it rain again tomorrow?’ (HuangShi2016)

A closer look: superficial redundancies It is noteworthy that several sample expressions in their function as ‘again’ tend to be accompanied by other items that signal repetition. In the sample, such cases are attested for Barabayiiga-Gisamjanga Datooga *údu-*, Paiwan =*anan*, Southern Ndebele *sa-*, Southern Lengua *makham*, and Udihe *xai(si)*. Superficial redundancies of this kind are a recurrent theme with functional extensions of STILL expressions, see, for instance Sections 2.4.4 and 3.3.1. In the case of Southern Ndebele *sa-* and Paiwan =*anan* this gives emphasis to the recurrent nature of the event in question; in the case of =*anan*, a reading of a continued series of repetitions is also available (Section 2.2.4).

Discussion: conceptual similarities The widespread coexpression of phasal polarity STILL and iteration/restitution is not surprising if one considers the conceptual similarities between the two notions. In broad strokes, they both involve continuation, or the accumulation of time intervals. Where they differ is primarily in homogeneity: STILL involves uninterrupted continuation, whereas iteration and restitution feature intervening temporal gaps (vanderAuwera1991BeyondDuality, vanderAuwera1993; vanBaar1997; JingSchmidtGries2009; MosegaardHansen2002, MosegaardHansen2008; TovenaDonazzan2008; Wilkins1989; among others). In addition, STILL and ‘again’ also share the notion of identity, which is relevant for the Australian markers in question.

2.4 Broadly adverbial temporal-aspectual functions

Discussion: a diachronic perspective Against the backdrop of the similarities just outlined, developments from **STILL** to ‘again’ as well as the other way around, are attested. In what follows, I briefly summarize what is known about the history of some of the sample expressions. I sketch out a few bridging contexts and point to intra-systemic constellations that may play role in the relevant developments, without any claim to comprehensiveness.

The development of an ‘again’ sense out of an originally phasal polarity one is well-established for French *encore*. As Mosegaard Hansen 2008 discusses, a bridging context can be found in instances like (98). This example can be interpreted as involving the possible continuation of an overarching series ‘may still help me’ or as the occurrence of another event of the same type ‘may help me again’. A very similar instance, albeit featuring necessity rather than possibility, is found in the Classical Nahuatl example (99), where the iterative interpretation is furthermore strengthened through the presence of *quēmman* ‘at times’.

- (98) Old French, ca. 1176–1184

 well help.INF still
 ‘God has helped me so far, so he may well help me still / again.’
 (*Eracle*, cited in MosegaardHansen2008, glosses added)

(99) Classical Nahuatl
Zā oc quēmman mo-cuā-zquē in ī-nāmic.
 only stilll at_times SUBJ.3:REFL-eat-PROSP DET POSS.3SG-spouse
 ‘Il faut que son mari (et elle) s'accouplent (“se mangent”) encore de temps
 en temps. [It is necessary that her husband (and her) mate (lit. eat each
 other) again from time to time]’ (Launey1986, glosses added)

Another item that most likely started out as an exponent of **STILL** and subsequently acquired an ‘again’ function is Southern Ndebele *sa-*. Cognates of this expression are found as phasal polarity expressions across the entire Nguni branch of Southern Bantu, but in most instances without repetition-related functions (e.g. CranePersohn2021; PoulosMsimang1998; SavicThesis). The same overall direction of change could also hold true for Barabiyiiga-Gisamjanga-Datooga *údu-*. While the exact pathways of change are unknown, it is noteworthy that *sa-* and *údu-* are both also involved in the expression of **NO LONGER**, and there is a well-known notional overlap between discontinuation and disrepetition (e.g.

2 Temporal and aspectual uses

vanBaar1997). This is particularly salient in irrealis contexts, or the negative mirror image of (98): ‘it won’t do it again’ is not all too different from ‘I won’t do it anymore’. Conceivably, this has played at least some role in the development of these marker. If I am on the right track here, then the restriction of B.-G. Datooga *údu-* as ‘again’ to the future tense and prohibitives could be a reflection of this function’s history.

The inverse direction, from ‘again’ to STILL can be firmly established for at least two markers in the sample, namely Mandarin Chinese *hái* and Ewe *ga*, both of which have their etymons in motion verbs ‘return, go back’. Similarly, the comparative data on Hebrew *sod* are indicative of an original meaning pertaining to repetition or circularity (BrownEtAl), though this sense has become lost in the present-day variety. In terms of actual usage, a plausible link is found in those instances in which a snapshot of the same atelic situation is given across different times. For instance, the Middle Chinese example (100) can be understood as either involving a reiteration of a similar life one generation after another, or as life as such remaining the same, with little to no difference in communicative import. This ambiguity is further enhanced by the presence of *ran* ‘same’.²⁴

- (100) Middle Chinese, 8th/9th century

Zi sun ri yang chang, shi shi hai fu ran.
son grandchild day and grow generation generation still again same
‘The children are growing day by day; life is still the same, generation by generation.’ (Yeh1998)

In a related fashion, Waelchli2006 observes that iterative markers can acquire a continuative interpretation in the context of “atelic (and therefore not strictly countable) activities where it does not make sense to apply the repetitive concepts ‘for a second/third time’” (Waelchli2006). He illustrates this with the Vietnamese example (101). Here, the second quote from Moses constitutes a seamless continuation of a speech event that is recollected in two pieces.

- (101) Vietnamese

Vì Môi-se có nói: Hãy tôn-kính cha mẹ người; lại nói: Ai rủa-sả cha mẹ, thì phải bị giết.
for Moses have say IMP honour-honour father mother pupil again say who curse-charge father mother then shall suffer die
‘For Moses said “Honor your father and mother”, and “Anyone who

²⁴The combination of *hái* with *fu* ‘again’ in (100) is common at this stage of the language, and is due to *hái* < *huan* ‘return’ acquiring the iterative reading through the frequent collocation with this marker (Yeh1998).

2.4 Broadly adverbial temporal-aspectual functions

curses their father or mother is to be put to death.”
 (Mark 7: 10, cited in Waelchli2006)

Asides from such relatively direct pathways, the expression of the negative phasal polarity concept NO LONGER may once again play a role. Thus, it is conceivable that the logical equivalence between NO LONGER p and \neg STILL p (Section 1.4.1) can open the doors to the reanalysis of an originally disrepetitive construction as the outer negation of a STILL expression.²⁵ vanBaar1997 suggests that this is what took place in the case of Ewe *ga-*, and the same process appears to be currently going on with Bambara *túguni* and *bilen*. The two Bambara items are both involved in the expression of NO LONGER, and, according to DombrowskyHahn2020 (DombrowskyHahn2020, DombrowskyHahn2021), the ‘again’ function in affirmative contexts is both older and more frequent.

Last, but far from least, another indirect link may be at play in the case of the two relevant sample expressions from Australia, Wubuy -*wugij* and Gooniyandi =*nyali*. Both markers also function as non-scalar exclusive operators ‘only’ (Section 3.4.2). The same is true of Gurindji =*rni*, which forms part of the enclitic =*rningan*. As SchultzeBerndt2002 points out, exclusive and repetitive uses share the notion of identity ‘just that (type of) situation, just that original state (not any other)’. At least in principle, it is conceivable that the affirmative phasal polarity function and the one as markers of repetition arise independently out of a prior exclusive function. I leave this question open for further cross-linguistic research.

2.4.2.2 Repetition via increment

Introduction In this subsection, I turn to iterative and restitutive uses that involve the collocation of a STILL expression with an event quantifier. The Classical Nahuatl examples in (102) are illustrations. In (102a), *oc* plus *cē-ppa* ‘one-time’ signal a second eating event. In (102b), the same collocation marks the restauration of a bone’s original location.

- (102) Classical Nahuatl
- a. *Auh quēmman oc cē-ppa*
 and when still one-time

²⁵The mirror image, so to speak, of this process is attested for most of Southern Slavic, where ‘more’ > ALREADY via the reanalysis of NO LONGER p as ALREADY $\neg p$ (vanderAuwera1998; Buchholz1991).

While the examples in (102) feature a nominal constituent as the second part of the collocation, the same use is also attested with denumeral verbs ‘do time(s)’, as in the Saisiyat example (103).²⁶

(103) Saisiyat

Yao 'am=mari' ka lapwar boay 'a-k<m>ai; 'okay

 hook<AGT.FOC>succeed=CMPL take=CMPL ACC fruit GEN guava
 ‘I was trying to gather guavas but I could not hook them; I tried again and succeeded in catching guavas.’ (ZeitounEtal2015)

Distribution in the sample Table 2.7 lists the expression in the sample that have repetition uses in combination with an event quantifier. Table 2.7 also indicates whether these phasal polarity items have can have a comparable function on their own. As can be gathered, the uses I discuss here are attested for ten expressions. Crucially, only four of these also have similar functions outside the relevant collocations. At least from a cross-linguistic perspective, this means that

²⁶For a discussion of the structure of denumeral verbs in Saisiyat, see ZeitounEtal2010 (ZeitounEtal2010, ZeitounEtal2015).

2.4 Broadly adverbial temporal-aspectual functions

the two ways of marking repetitions should be kept separate, unlike what is commonly assumed in descriptive grammars of individual languages such as French (e.g. BatchelorChebliSaadi2011). In terms of geographic distribution, repetition uses involving an event quantifier are attested primarily from Eurasia, which suggests some degree of areality to the phenomenon.²⁷ Lastly, except for Northern Qiang *tce-* all relevant cases involve independent grammatical words, though this may merely be an indirect effect of the geographic distribution.

Table 2.7: Repetition via increment

M.-Area	Language	Expr.	Alone	With event quantifier		
				Collocate		Appendix
Eurasia	French	<i>encore</i>	y	NUM <i>fois</i>	‘time(s)’	D.2.1.5.2
	German	<i>noch</i>	n	(<i>ein</i>) <i>mal</i>	‘(one)time’	D.3.1.4.1
				- <i>mal-s</i>	‘-time-ADV’	D.3.1.4.1

Papunesia	Saisiyat	<i>nahan</i>	y	denumeral verb		F.16.1.3.2

* Only one example in the data.

A closer look I have already indicated that a repetitive event construal in combination with an event quantifier does not entail that a STILL expression has a similar function on its own. What is more, there are no indications that the relevant collocations are subject to the same lexical and/or grammatical restrictions that bare ‘again’ uses of STILL expressions are (Section 2.4.2.1). A noteworthy parallel can, however, be observed in terms of the iterative–restitutive distinction. Table 2.8 indicates which of the two construals are available for each collocation. As can be seen upon examination, all collocations in question have an iterative use, whereas the restitutive one is attested for only four collocations and three

²⁷The same functions are attested for several cognates of my sample expressions, for instance Dutch *nog* (Koenig1991) and cognates of Serbian-Croatian-Bosnian *još* across Slavic (SSJC; KSS4; Mustajoki1988). They are also found with Hungarian *még* (BarcziOrszagh1992) and Finnish *vielä* (Koenig1991).

2 *Temporal and aspectual uses*

Table 2.8: Iterative-via-increment vs. restitutive-via-increment

* With qualifications; see discussion below.

distinct expressions. This distribution can be stated as the absolute universal in (104) and which is fully parallel to the one given in (89) above.

- (104) If a **STILL** expression has a restitutive-via-increment use, it also has an iterative-via-increment use.

Interestingly, though, the sample data suggest that the availability of the less common restitutive function is largely independent of the whether the **STILL** expression in question can also signal the restoration of a state on its own. Thus, Classical Nahuatl *oc cē-ppa* ‘still one-time’ is unequivocally attested in both readings, as shown in (102) above. Bare *oc*, on the other hand, appears to only have the iterative use. A comparable situation might hold true of Ket *hāj* and the collocation *hāj biks'a* ‘still different/again’, but the data are much more limited in this case. Lastly, the case of German *noch* *noch einmal* and its variants *nochmal*, *nochmals* requires some discussion. Aside from an uncontroversial iterative reading, these forms are occasionally described as having a restitutive use, as well (Duden; Nederstigt2003; Shetter1966). A typical example is given in (105).

- (105) German
- | | |
|--------------------------------------|----------------------------------|
| <i>Sie bestell-ten eine</i> | <i>Flasche Gruaud Larose bei</i> |
| 3PL order-PST.3PL ART.INDEF:ACC.SG.F | bottle(F) G. L. at |

2.4 Broadly adverbial temporal-aspectual functions

<i>ihr</i> ,	<i>die</i>	<i>Hans Castorp noch ein-mal</i>
3SG.DAT.F	REL.ACC.SG.F	H. C. still ART.INDEF-time
<i>fort-schick-te</i> ,	<i>um sie</i>	<i>besser temperier-en zu lass-en.</i>
away-send-PST.3SG	to 3SG.ACC.F	better temper-INF to let-INF

‘They ordered a bottle of Gruaud Larose from her, **which Hans Castorp sent back to have it brought to drinking temperature.**’ (Mann, *Der Zauberberg*; cited in Shetter1966, glosses added)

In (105) the restoration of the bottle’s original location is markedly transitory. As is made explicit in the subsequent clause, the bottle is to be brought to the table once more after it has reached the desired temperature. My personal judgement suggests that the same applies to similar German examples in the literature. This is probably due to other functions of the items involved. Thus, *noch* also has a ‘further-to’ use (Section 3.3.3), which can be paraphrased roughly as ‘do one more thing (before moving on)’. The second part of the collocation, *(ein)mal*, also serves as an indefinite temporal adverb and as a hedge (e.g. **Duden**). Putting these two pieces together, example (105) can be read as ‘... which H. C. then sent away for some time (before moving ultimately consuming it)’. In other words, such instances of *noch (ein)mal/nochmals* appear to not be purely restitutive, which qualifies the cross-linguistic availability of this type of use even further.

Discussion I now turn to the question of what motivates the STILL-plus-event quantifier collocations. As the title of this subsection already suggests, what lies at the heart of them is additivity, in that ‘still one time’ via ‘one more time’ yields ‘again’. This interpretation is, of course, in line with adverbial phrases such as English *once more* or Spanish *otra vez* lit. ‘(an)other time’. And, indeed, out of the ten relevant sample expressions, nine have have an additive function (Section 3.3.1). The one possible exception is Kalaallisut *suli*, illustrated in (106).

(106) Kalaallisut

Context: Whitey has been told to take a closer look at a mare and her colt. He has circled them once and not noticed anything.

<i>“Aju-<i>quiti-qar-nir-su-q</i></i>	<i>taku-<i>sinnaa-nngi-la-ra</i>”</i>

“I can’t see anything that’s wrong with him”, said Whitey, after circling

2 Temporal and aspectual uses

the mare and her colt one more time.' (BittnerTexts)

The available data are not very conclusive when it comes to an additive function of *suli*. However, FortescueEtAl1984 list 'more' as a sense of Proto-Eskimo **cu(na)li* and generalized additive functions are found, for instance with the cognate expression *cali* in Central Alaskan Yupik (Miyaoka2012). All this suggests that the Kalaallisut attestation in (106) also builds on an additive function of *suli*, if perhaps only in diachronic terms.

2.4.3 'Always, all the time'

Introduction In this subsection I address uses involving universal temporal quantification ('always') and closely related notions, such as quantification over the entirety of a some specific time span ('the whole time'), or frequentative ('all the time') and distributive ('every time') event construals. Example (107) is an illustration from Chuwabu.

(107) Chuwabu

Context: a certain man's wife constantly falls sick.

sabw' eelá w-aá-kála *mu-reddá=ví ábále,*
 because COMP SUBJ.NCL1-PST.IPFV-COP NCL1-sick.PL=still DIST.NCL2
ábáálé éená á-á-ni-mu-nyapwaariyá.
 NCL2.sister NCL2.other SUBJ.NCL2-PST-IPFV-OBJ.NCL1-despise
 'because she was always sick, those ones, the other sisters, despised
 here.' (Guerois2015)

Distribution in the sample Table 2.9 lists the expressions in my sample that have the 'always, all the time' use. As can be gathered, this function is attested for seven languages and expressions from all macro-areas minus South America. It is unclear whether the absence of examples from the latter continent is a true areal effect or merely an artefact of the data.

Unfortunately, my sample obscures a well-established tendency in Eurasia. Thus, the case of French *toujours* finds a synchronic parallel in cases like Italian *sempre* (GDLI). What is more, English *still* and Spanish *todavía* both historically had an 'always' sense. In addition, many European languages make the the unexpectedly late scenario of STILL explicit by augmenting a STILL expression with an 'always' item. In my sample, this is the case for German *noch > immer noch/noch immer* and for Serbian-Croatian-Bosnian *još > još uv(ij)ek*. These instances, together with similar cases involving a generic universal quantifier ('all'), cover a

contingent area in central, western and eastern Europe (vanderAuwera1998). In what follows, I take a closer look at the European context. Afterwards, I turn to the cases from African, Australian, and Papunesia cases and lastly to Osage šó.

A closer look and discussion: the European cases To develop a better understanding of the relevant European expressions, it is worthwhile taking a diachronic perspective. In all cases that I am aware of, 'always' and related notions historically precede phasal polarity STILL. What is more, such notions entail persistence (MosegaardHansen2008), in that an interval leading up from an earlier time to the speaker's now (or another salient evaluation time) is a subset of any larger interval centred around it. With this in mind, valuable insights can be gained from the well-documented cases of French *toujours* and Spanish *todavía*. In MosegaardHansen2008's (MosegaardHansen2008) diachronic corpus study, the first attestation of *toujours* as a marker of persistence is found in (108). Judging from the surrounding text, a distributive reading might remain latent, namely that the man in question is found with the same strength at each attempt of removing him. Similarly, Bosque2016 observes that there are instances of *todavía* in Old Spanish that can be understood both ways, as in (109).

(108) Old French, 13th century

Si le troevent de tele force et de tele vistece que il ne cument mie que il soit hons terriens ... Si s'esmaient mout, car il voient que il nel pueent remuer de place,

'Thus, they find him to have such strength and such speed that they do not believe that he is an earthly man ... So they become very fearful, for they see that they cannot remove him from his place'

 (*La Queste del Saint Graal*, cited in MosegaardHansen2008, glosses added)

- (109) Old Spanish, 13th century

Por ende nos d-amos gracias a Dios toda uia.

for DEM 1PL give-1PL thanks to God always/still

‘Therefore, we always thank God / keep thanking God.’ (*El Nuevo Testamento según el manuscrito escurialense I-j-6*, cited in Bosque2016, glosses added)

Present-day French *toujours* remains a borderline case of a STILL expression in that it does not necessarily feature a prospective component. No such qualification applies to Spanish *todavía*. For several centuries after developing its perspective function, *todavía* tended to be used together with expressions that defeasibly implicate a point of discontinuation (Bosque2016; Morera1999). For instance, in (110) it is accompanied by *fasta que se viene* ‘until he comes’. In the same vein, *todavía* often went together with *aún*, which was already established as STILL expression at that stage of the language; see (111). As Bosque2016 argues, through a strong association with such collocations the evocation of an alternative scenario became a conventionalized component of *todavía*’s own meaning, thereby transforming it into a *bona fide* exponent of STILL.

‘You still see many of that kind in Spain.’ (de Ulloa, *Viaje al reino de Perú*, cited in Bosque2016, glosses added)

In fact, the same development may be currently going on with French *toujours*. Thus, item is often used jointly with the full-fledged STILL expression *encore* (e.g. MosegaardHansen2008), as in (112). This could ultimately lead to *toujours* acquiring a prospective meaning component, as well.

- (112) French

‘I am still and ever / after so many many years / that same child pulling a string / in pursuit of the wind.’ (Soupault, *Cerf-volant*, cited in MosegaardHansen2008, glosses added)

A closer look: the southern hemisphere cases While ‘always, all the time’ entails persistence, this implication does not hold the other way around. Consequently, I am aware of no expression that unequivocally went from STILL to ‘always’, at least not in a straight path. Guerois2021 does suggest that such a development might have taken place with =vi in the Bantu language Chuwabu, but this requires the stipulation of an “interpretive augmentation ... ‘I am still walking’ may be equivalent to saying ‘I am always walking’” (Guerois2021) and which I find hard to follow. On the other hand, =vi shares a common denominator with the Australian and Papunesian cases in Table 2.9 (Jaminjung (C)=ung, Gooniyandi =nyali, Gurindji =rni, Rapanui nō). All five expressions also serve as exclusive operators ‘only’ (Section 3.4.2) and there is an overlap between ‘only’ and ‘always, all the time’ in cases where

the states envisaged ... are mutually exclusive, i.e. they cannot occur simultaneously, if two states were to occur during a period, they would occur at

2 Temporal and aspectual uses

different times, and therefore neither of the states would occur uninterruptedly ‘all the time’. (McConvell1983)

For instance, what is at stake in (113) is the addressee’s communicative behaviour vis-à-vis the speakers. If understood as an exclusive operator, *=rni* signals that all contextually accessible propositions that differ in the denotation of *pawu* ‘ignore [us]’ are false. This set encompasses at minimum ‘listen (to us)’, which is mentioned in the immediate discourse environment. If all the addressee does is to ignore the speakers, then he never engages in any other relevant behaviour, and vice versa.

- (113) Gurindji

Kula=n pura nya-ngku; ngu=n=ngantipa pawu=rni

pa-nana.
 hit-PRS

‘You can’t listen; you always just ignore us.’ (McConvell1983)

With Jamjinjung-Ngaliwarru *=(C)ung* the ‘always, all the time’ use is limited to secondary predicates, as in (114). With one minor exception, the same restriction applies to Gooniyandi *=nyali*. Both markers have a whole range of meanings when adjoined to a secondary predicate, all of which are compatible with their exclusive function (McGregor1990; SchultzeBerndt2002).

- (114) Jamjinjung-Ngaliwarru

Ngarrgina=malang gujarding digirrij ga-jga-ny

mangarra nganja~nganjany.
 plant_food REDUPL~what

‘My mother passed away (always) having been cared for (lit. “fed”), me I used to give her food (and) things’ (SchultzeBerndt2002)

In a nutshell, these data points suggest that the ‘always, all the time’ use of the African, Australian and Papunesian sample expressions is not directly related to the same items as exponents of STILL. Instead, it seems more plausible that the nexus between these functions lies in their additional function as exclusive operators. This interpretation, in turn, finds external support from *=gon* in the

2.4 Broadly adverbial temporal-aspectual functions

Finisterre-Huon language Nungon, which is a polyfacetic exclusive marker that can also signal ‘all the time’ (Sarvary 2017), but which appears to not function as an exponent of phasal polarity.

A closer look: the case of Osage *šó* There is one expression in Table 2.9 that I have not discussed yet, namely Osage *šó*. This item signals ‘always’ in various complex forms, all of which involve its reduplication plus suffixation of the proximal demonstrative *ðe*; see (115). As in this example, the initial segment of *ðe* is often weakened to a glide.

- (115) Osage
Šó~šó-we *naniópa ðaašoé* *hta apa-i.*
 REDUPL~still-PROX pipe 3SG.A:smoke FUT 3.CONT-DECL
 ‘He will always smoke.’ (Quintero2004)

Asides from signalling phasal polarity and ‘always’, Osage *šó* also functions as a marker of simultaneous duration (‘while’), which is a cross-linguistic recurrent use of STILL expressions; see Section 2.5.3.1. In fact, this is the only other use in which *šó* can merge with the demonstrative *ðe* and where the latter morpheme’s initial segment tends to undergo lenition (Quintero2004, QuinteroDictionary). What is more, the two functions share a key syntactic feature. Thus, *šó* as a marker of phasal polarity invariably stands between the predicate and the following continuative auxiliaries, as in (116), but the ‘always’ forms can precede the verb complex and thereby occupy the same position as a temporal clause. These morphological and syntactic characteristics unanimously point to the ‘always’ use of the reduplicated *šó-we* forms as building on the simultaneity function. Presumably, the underlying semantic pathway is along the lines of ‘during that time’ > ‘during all times’, which would be fully in line with the meaning of reduplication in Osage (see Quintero2004).

 ‘Your teeth are still good.’ (QuinteroDictionary, glosses added)

2.4.4 Prospective ‘eventually’

Introduction In this subsection, I discuss a use in which a STILL expression signals that “there is a certain development under way which (finally) leads to

2 Temporal and aspectual uses

an event of the kind stated” (Loebner1989).²⁸ Example (117) is an illustration. Here, Plateau Malagasy *mbola* signals that the predicted situation of the type ‘he comes’ will take place before the end of some contextually salient larger time span.

- (117) Plateau Malagasy

Mbola ho avy.
still FUT come

‘Il doit venir dans un délai plus ou moins long. [He should come sooner or later]’ (Ferrand1903, glosses added)

Distribution in the sample Table 2.10 lists the languages and expressions for which the prospective ‘eventually’ function is attested. As can be gathered, fourteen expressions and languages have this use. These stem primarily from Africa and Eurasia, plus one instance each from Papunesia and South America.²⁹ With the limitations of the sample data in mind, this suggests some degree of areality to the phenomenon.

A closer look It comes as little surprise that the marking of prospective ‘eventually’ is most commonly attested in combination with future tenses and prospective aspects, as in the initial example (117). However, the same function also occurs with other tense-aspect paradigms that can point forward in time, like the Spanish present-as-future in (118). Similarly, one finds the occasional instance of other non-actualized contexts, such as the imperative in (119), or the purpose clause in (124) below.

- (118) Spanish

¿A que todavía termin-o?
to SUBORD still finish-1SG

‘I bet you that I will finish [yet].’

(Garrido1992, glosses added)

²⁸Similar characterizations are given by Ferrand1903, Koenig1991, KoenigTraugott1982, MetrichFaucher2009, Shetter1966 and Vaelikangas1982, among others.

²⁹Outside of my sample, the function is found with Hungarian *még* (BarcziOrszagh1992) and Finnish *vielä* (Koenig1991), as well as with cognates of several sample expressions, such as Dutch *nog* (Vandeweghe1984; Koenig1991), the congeners of Serbian-Croatian-Bosnian *još* across Slavic languages (e.g. Bogacki1989; Koenig1991) and the cognates of Kaba *bbáy* in other Sara languages (e.g. Palayer1989, Palayer1992; examples throughout Keegan2014; Thayer1978; Vandame1963).

2.4 Broadly adverbial temporal-aspectual functions

 ‘I do not have enough paper and pens; go and buy some later!’
 (ZeitounEtal2015)

Mundang *ɓà* is somewhat of an outlier in that its ‘eventually’ function has been described as being restricted to the optative and potential mood inflections (Elders2000); example (120) is an illustration. This is despite Mundang having dedicated future tense and prospective aspect paradigms.

- (120) Mundang

?à f̄v̄ò ɓà.
 SUBJ.3:IPFV think.POT still
 ‘Il pensera un jour. [He will think one day]’ (Elders2000)

When it comes to the situation’s internal make-up, ‘eventually’ is less selective than phasal polarity STILL, because the situation in question need not actually persist in time. Examples (121, 122) illustrate this use in combination with an achievement predicate.

2 Temporal and aspectual uses

- (121) Plateau Malagasy

Mbola ho avy.

still FUT come

‘Il doit venir dans un délai plus ou moins long. [He should come sooner or later]’ (Ferrand1903, glosses added)

- (122) Serbian-Croatian-Bosnian

Context: at a sports event. Our team is lying behind.

Pobedi-ćemo mi još.

win.PFV-FUT.1PL 1PL still

‘We’ll win yet.’ (Stefan Savić, p.c.)

The two functions may also differ when it comes to their interaction with negation. Thus, when Modern Hebrew *sod* in its phasal polarity function is paired with a negated predicate, this predictably yields NOT YET. In the ‘eventually’ use, on the other hand, this constellation gives rise to a prediction of a negative state (FrancezOd). This is shown in (123).

- (123) Modern Hebrew

Context: about failures to deal with sexual harassment in organized sport. The writer is being sarcastic.

Im ze yi-mašex kaxa, b-a-sof sod lo
if PROX.SG.M 3SG.M-continue.FUT thus at-ART.DEF-end still NEG

ti-hye la-hem brera ela le-manot iša

NCL3-army	NEG-SUBJ.NCL3-still-go-NEG	NCL15(INF)-defeat-PASS

‘The army **will never** be defeated.’ (McLaren1936, glosses added)

In terms of its larger sentential embedding, it is not uncommon for the use I describe here to be accompanied by another expression with a similar meaning. For instance, in (123) it goes together with *basof* ‘in the end’. Closely related, with German *noch* the ‘eventually’ reading can be enforced through items like *schon* ‘no doubt’, lit. ‘already’ in the same clause; see (126).

(126) German

<i>Die</i>	<i>Männer sind</i>	<i>eben stark</i>	<i>verunsichert, aber die</i>

‘The men are just very unsettled, but **no doubt eventually** they’ll learn it.’ (Thurmair1989, glosses added)

Discussion Having taken a closer look at the prospective ‘eventually’ use, the question arises what motivates its recurrent co-encoding with phasal polarity STILL. As pointed out before me by Loebner1989, Koenig1991 and FrancezOd, the two functions share a core of “antiterminativity” (Vandeweghe1984). That is to say, just as the phasal polarity concept signals that the conceivable end of a situation has not been reached at the time under discussion, the use I discuss here marks that a situation will take place “before all is over” (OED2022). Figure 2.2 is a graphic comparison, using a perfective viewpoint for ease of illustration.

As far as a more material nexus between the two functions is concerned, I cannot disregard the possibility that the two functions may be linked together by a common source, similar to how the STILL expression *baṣd* in Levantine Arabic is from a lexeme ‘behind, after’ (TaineCheikh2016). However, for around half of the items in Table 2.10, the known etymologies and/or the comparative evidence

2 Temporal and aspectual uses

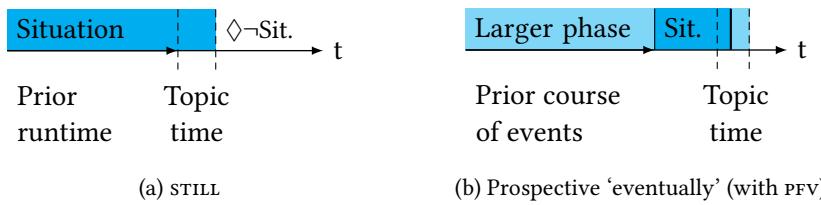

Figure 2.2: Schematic illustration of prospective 'eventually'

strongly point to a primacy of phasal polarity STILL. Where diachronic investigations are available, they indicate that prospective 'eventually' can arise very early on. Thus, **MosegaardHansen2008** observes that relevant attestations of French *encore* are found just a century after the same item as an exponent of STILL. An example is given in (127). Similarly, in the case of English *yet*, which once used to be a full-fledged STILL expression, the 'eventually' function is documented since early stages of the Old English period (**KoenigTraugott1982**); see (128). Assuming the two cases are representative, they suggest some readily available contexts or constellations that trigger the development of the prospective function.

- (127) Old French, ca. 1150

2.4 Broadly adverbial temporal-aspectual functions

Against this backdrop, the pertinent literature has three interpretations on offer. In what follows, I briefly summarize each of them and discuss how they hold up against the sample data. I then conclude that the most likely source of the ‘eventually’ use is found in contexts where a STILL expression takes scope over a modal or prospective operator.

According to the first proposal, most prominently made by **KoenigTraugott1982**, phasal polarity STILL and prospective ‘eventually’ are connected only indirectly. What supposedly links them together are additive functions of the same expressions, such as the one illustrated for German *noch* in (129). This idea is based on the observation that additive uses of STILL expressions tend to go together with notions of “adding up to a larger whole” (**Koenig1991**); see Section 3.3.1 for more discussion of this observation.

- (129) German

Context: after having consumed other drinks.

Ich trink-e (auch) noch ein Bier.
1SG drink-1SG also still ART.INDEF:ACC.SG.M beer(N)
'I will have a beer, too.' (**Koenig1991**, glosses added)

As far as the sample expressions are concerned, additivity as the key could yield a motivated explanation as to why in Modern Hebrew the ‘eventually’ use is found with *sod*, which has a range of additive functions, but not with its near-synonym *sadayin*, which lacks them.³⁰ What speaks against this interpretation are the cases of Mundang *ba* and *sa-* in Southern Ndebele and Xhosa, which are not attested in a general additive function.³¹ That is to say, additive functions are not a prerequisite for the use I discuss here. In **KoenigTraugott1982**'s defence though, it is conceivable that they do provide some degree of supplementary motivation in certain cases. For instance, in the Spanish example (130) below, there is a lingering notion of '(if it weren't bad enough as is) on top of that ...'.

The second approach has it that prospective ‘eventually’ is essentially no different from phasal polarity STILL. Instead, it just involves a wider scope, such that “T[opic] T[ime] ... is ... not the unspecified future time ... but rather the time of utterance. It is then not the as-yet-unrealized SoA itself that remains in force during an extended interval, but the prediction of its eventual realization.” (**MosegaardHansen2008**). At first glance, this is an elegant interpretation insofar as it requires only a simple, well-established mechanism and little change in

³⁰This begs the question of relative chronology, though.

³¹Mundang *ba* does have a sequencing ‘and then’ use that involves temporal additivity, but the data suggest that the latter goes back to the use I discuss here, rather than the other way around (Section 2.4.5.2).

2 Temporal and aspectual uses

meaning. What is more, it is tempting to understand the case of Mundang *bà* as an argument in favour of it. As I laid out above, this item has the relevant use only in combination with the potential and optative mood inflections, which suggests a fully compositional analysis. However, the relevant attestations do not necessarily have any modal meaning components other than those inherent to any future prediction:

the construction signals an event that is not actualized at the time of speech but that will be actualized at some time in the future. A statement with the tardative [marker *bà*] and a verb in the non-actualized forms translates into a future ... in Cameroonian French it is often translated as *après* 'later' (Elders 2000)³²

What is more, an analysis involving a persistent prediction is hard to conciliate with the discursive embedding of many examples from other languages. For instance, in the context of (130) it is hard to see how a prediction of accusation previously figures in the common ground. Likewise, in (119), repeated below, it would be odd to assume a prior obligation to go and buy pens.

(130) Spanish

(119) Saisiyat

³²In the original French, "la construction indique un événement qui n'est pas actualisé au moment d'énonciation mais qui sera actualisé dans le futur après une période de temps. Un énoncé avec le Tardatif et un verbe non-actualisé se traduit par un future ... se traduit souvent en français camerounais par 'après'".

2.4 Broadly adverbial temporal-aspectual functions

 1SG.GEN RL-draw-LOC.FOC INST<AGT.FOC>draw NEG.LNK.STAT enough
Rima' baeiw naehan!
 go.IMP buy.IMP still
 'I do not have enough paper and pens; go and buy some later!'
 (ZeitounEtal2015)

In the same vein, **Koenig1991** discusses several subtle, yet crucial, differences between English *still* and prospective *yet* in the context of modal operators (recall that *yet* started out as a **STILL** expression). Consider the examples in (131). *Still* in (131a) yields a persistent obligation regarding a specific situation, and therefore allows for a referential reading of the object NP. With *yet* in (131b), on the other hand, the necessity pertains to any event of the type 'meet a generous Scotsman' that may occur in the future. If the 'eventually' reading of *yet* were due to the adverb taking wide scope, one would expect the two sentences to share the same interpretation.

- (131) English
- I still have to meet a generous Scotsman (namely Bill Stewart).*
 - I have yet to meet a generous Scotsman (before I believe that such people exist). (Koenig1991)*

In sum, the wide-scope proposal cannot be maintained as a synchronic analysis. It does, however, contain an important pointer as to how prospective 'eventually' can arise in the first place (as suggested before me by **Abraham1977**). Thus, a motivated source for this use can be found in contexts in which phasal polarity **STILL** associates with (i.e. has scope over) a modal or prospective proposition. Not only are such combinations likely to arise in discourse. Crucially, the persistent, though perhaps not ever-lasting, prediction of some situation also unilaterally entails that a situation of that type (possibly or necessarily) becomes a historic reality before the end of the same time span. This can easily open the doors to structural ambiguity and ultimately to a reanalysis of the contribution of the phasal polarity expression as one akin to a temporal frame adverbial indicating a time before the end of some salient larger interval (i.e. before it is too late). And, in fact, the historical record of French has the example (132) on offer, which pre-dates the more clear-cut instances of prospective 'eventually' by several decades (**MosegaardHansen2008**).

2 Temporal and aspectual uses

- (132) Old French, ca. 1080
Context: about converting to Christianity.

C. reply.3SG still can.FUT.3SG save-INF
‘Charles replies, “He may yet/still be saved.” (*La chanson de Roland*,
cited in MosegaardHansen2008, glosses added)

In the same vein, Shetter1966 points out that similarly ambiguous instances are frequently encountered in present-day German. This is illustrated in (133), featuring the STILL expression *noch* and a periphrastic necessity construction. To all appearances, a comparable case is found in the Kaba example (134). As far as the speaker's communicative goals are concerned, the difference between the two construals is subtle, at best.

- (133) German

*Trotz der schön-en selbst-gezogen-en Perinette-

d-ár-é bbay.
SUBJ.3PL-DAT.AUX-OBJ.3SG still*

‘But his change remained to be returned to him yet.’ (Moser2004)

While (132, 133) feature auxiliary verb constructions and (134) involves a purpose clause, there is no reason to assume that the same reinterpretation cannot apply to more strongly grammaticalized contexts, and the above-mentioned restrictions of Mundang *bà* to certain modal paradigms may simply be a reflection of this function's history.

2.4 Broadly adverbial temporal-aspectual functions

2.4.5 Uses relating to sequentiality

2.4.5.1 ‘First, for now’

Introduction In this subsection, I discuss a use of STILL expressions that marks precedence. This can be in a strictly sequential sense, with the situation depicted in the clause constituting the initial step in a series; an illustration is given in (135), where Kalamang *tok* depicts the prayer as the first act of the day. Alternatively, the notion of precedence can pertain to a preliminary situation that may be superseded later. This is shown in (136), where Japhug *pyjk^hu* contrasts the time for which the prompt to take a break is valid with a subsequent time span at which work will be resumed.

- (135) Kalamang

Context: the protagonists have decided to set out for a trip.

Go *yuol=ta* *me, wa me o, hari sabtu* <*me tok*>,
 condition day=NON.FIN TOP PROX TOP EMPH day saturday TOP still,
mu tok doa salamar=at paruo, fibir-un.
 3PL still prayer good_wish=OBJ do/make fibre-POSS.3

‘The next day, Saturday, they first, **they first did the good wish prayer**, for their fibre boat.’ (Visser2021b)

- (136) Japhug

Nyzo pyjkhu tw-rzwy ty-nuna tce tcetha ryma-tci.
 2SG still one-section IMP-rest LNK later work-1DU

‘你暂时休息一下，等一会我们再工作 [Take a break for now and we’ll work again later].’ (Jacques2016, glosses added)

The use I discuss here bears some similarity to the “further-to” use I address in Section 3.3.3, and which likewise suggests a contrast between the time under discussion and a subsequent interval. The key difference is that the latter function marks an event as an addition to some larger, ongoing course of events. Thus, in (137) the act of taking a shower is depicted as belonging to the phase of the day defined by soccer practice, while also signalling that it lies just before the transition to dinner time. Lastly, note that I discuss the marking of precedence in subordinate contexts ‘before *p, q*’ separately in Section 2.5.3.3.

- (137) German

Context: I have just come home from soccer practice. It is fairly late.

Ich dusch’ noch. Dann gibt-’s Abend-essen.

 ‘I’m just taking a quick shower. Dinner will be just after.’ (Beck2019)

2 Temporal and aspectual uses

Distribution in the sample Table 2.11 lists the ten expressions in my sample for which the ‘first, for now’ use is attested.³³ As can be gathered, it is found in all macro-areas minus Australia and with independent grammatical words as well as with clitics and affixes. Note that, in addition to the items listed, Wardaman *gaya-wun* and Western Shoshoni *eki-sen* transparently go back to ‘now/today-pertaining_to’ and ‘now-only’, respectively.

Table 2.11: ‘For now, for a while, first’

Macro-area	Language	Expression	Appendix
Africa	Adamawa Fulfulde	<i>tawon</i>	B.1.1.4.1
	Bende	<i>sya-</i>	B.4.1.4.1
Eurasia	Japhug	<i>pxjk^hu</i>	D.6.1.2.1
North America	Classical Nahuatl	<i>oc</i>	E.1.1.4.3
Papunesia	Kalamang	<i>tok</i>	F.7.1.5.1
	Paiwan	<i>=anan</i>	F.14.1.4.2
	Saisiyat	<i>nahan</i>	F.16.1.3.3
	Cavineña	<i>=jari</i>	G.1.1.4.1
South America	Culina	<i>-kha</i>	G.2.1.3.1
	Huallaga-Huánuco Quechua	<i>-raq</i>	G.3.1.4.1

A closer look On closer examination of the ‘first, for now’ use, there is a noteworthy gray area between this function and phasal polarity **STILL**, as evidenced by examples like (138). Here, the state in question obtains before topic time (the time under discussion) and the speaker intends for it to remain the same way, albeit not endlessly so, as becomes evident from the discourse context.

In fact, as-yet unactualized states-of-affairs, be it ones that entail the persistence of a pre-existing condition or ones corresponding to an entirely new situa-

³³Outside of my sample, this use has been described for *nánu* in the Bantu language Lingala (NassensteinPasch2021), as well as for *ci-* in another Bantu language, Luvale (Horton1949), and its Holoholo cognate *ki-* (Coupez1955). In Papunesian, it is attested for *ngabak* in the Austronesian language Dakaka (vonPrince2015) and for Yeri (Nuclear Torricelli) *kua* (Wilson2017). A candidate from South America is Tariakana (Arawkan) *daka* (examples throughout Aikhenvald2003).

2.4 Broadly adverbial temporal-aspectual functions

tion, are a recurrent theme. Thus, with Cavineña *=jari* the relevant use is primarily found in imperative-hortative constructions and with predictions of transient future situations. Both types of contexts are illustrated in (139).

(139) Cavineña

- a. *Pisu-kwe=jari=shana juye=ekatse! Pa-kanajara ekatse!*
untie-IMP.SG=still=PITY OX=DU JUSS-rest 3DU

- b. *Tasi ju-ya=jari metajudya=ishu.*
drive_taxi:1SG COP-IPFV=still tomorrow=PURP
'I will drive my (motorcycle) taxi a little bit for (me to have money) tomorrow.' (Guillaume2008)

A third type of context in which *=jari* can have the 'first, for now' reading is the turn- or conversation closer in (140). The latter appears to be a cross-linguistically recurring environment, and similar attestations are found with Classical Nahuatl *oc* and with Culina *-kha*.

(140) Cavineña

- Jadya=kamadya=jari!*
thus=only=still
'That's all for now! (but there will be another meeting or story)' (Guillaume2008; Antoine Guillaume, p.c.)

In the case of Bende *syá-* the use in question is restricted to the formally unmarked imperfective present. It is noteworthy, however, that this collocation always involves a modal component in the form of an exhortation; see (141). Relatedly, in Paiwan the 'first, for now' use of *=anan* often blends into an announcement of what the speaker is about to do, or that it is someone's turn to perform an act (Appendix F.14.1.4.3). This is illustrated in (142).

(141) Bende

- Tu-syá-tehă.*

 and 2SG.NOM-SBJV=STILL friend-NMLZ PREP REDUPL~monkey
 [Crab:] ‘Now it’s your turn, friend monkey.’
 (EarlyWhitehorn2003)

With Kalamang *tok* and Saisiyat *nahan*, on the other hand, ‘first, for now’ has given rise to a politeness function in directive speech acts; see (143). As I discuss in some more detail in Section 3.5.6.2, this is a clear instance of intersubjectivization, based on reducing the threat to the addressee’s negative face and acknowledging the imposition that is being made.

- (143) Saisiyat
Si’ael nahaen.
 eat.IMP still
 ‘Chi gè dongxi (zài zǒu) ba! / Come have a bite (before you leave)!’
 (Huang2008).

Given that the situation depicted in the predicate need neither be actualized nor persistent, the ‘first, for now’ use is less selective than phasal polarity STILL when it comes to all things aspectual. For instance, in (144), it occurs together with an achievement predicate ‘give’, signalling that the transfer of possession is only temporary. To give another example, in (146) below this function goes together with a perfective viewpoint.

- (144) Culina
O-kha koshiro tia-za da o-to-na-kha-ni towi.
 1SG-POSS knife 2-LOC give 1SG-IT-AUX-still-DECL.F FUT
 ‘Emprestarei minha faca para você. [I’ll lend you my knife]’
 (Tiss2004)³⁴

In terms of its larger sentential embedding, this use, like many functional extensions of STILL expressions, is recurrently attested with other items that have a similar meaning. For instance, in the Classical Nahuatl example (152) *oc* goes together with *achto* ‘first’. In (146), the predicate modified by Saisiyat *nahan* itself denotes a transitory event ‘pass by’.

³⁴ As Tiss2004 discusses, the translation as *emprestar* ‘lend’ is due to the collocation of *da* ‘give’ and *-kha*. Without this suffix, the predicate would be understood as denoting a permanent transfer of possession.

2.4 Broadly adverbial temporal-aspectual functions

 (ZeitounEtal2015)

Lastly, *Culina -kha*, first seen in (144) above, is an interesting case. To all appearances, even in its function as a marker of phasal polarity it tends to evoke a notion of precedence. Thus, Tiss2004 describes its semantic import in such sentences as “before something else happens, the situation in question still continues for a limited time”.³⁵ Example (147) is an illustration. As I discuss in Section 3.4.3, in this characteristic *Culina -kha* is very similar to another sample expression, *Mateq bayu*. The main difference is that *bayu* is not attested in a purely relational sense. I return to this point below.

- (147) Culina
Zohe papeo wa wa na-kha-wi.
Z. paper call call 3:AUX-still-DECL.M
'Zohe ainda está lendo (antes de logo fazer outras coisas). [Zohe is still reading (before later doing something else).'] (Tiss2004)

Discussion I now turn to a discussion of the conceptual and usage-based ties between phasal polarity **STILL** and the ‘first, for now’ use. In general terms, both functions share a sequential component in that they evoke a contrast between a situation (or a state brought about by one) and a subsequent phase at which it may have ceased.³⁶ Figure 2.3 is a graphic comparison, using an imperfective viewpoint for ease of comparison. Given this similarity plus the lack of etymological or historical data for most of the relevant expressions, a development in either direction seems plausible.

³⁵In the original Portuguese, “antes de algo novo acontecer, a situação em questão ainda continua por um período limitado”.

³⁶A very similar observation is made by Launey 1986.

2 Temporal and aspectual uses

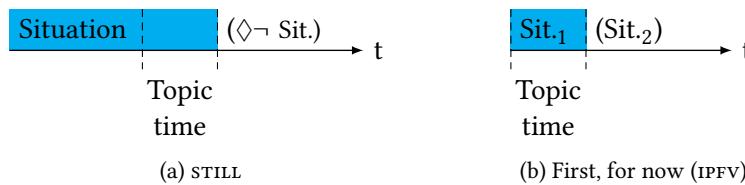

Figure 2.3: Schematic illustration of ‘first, for now’ (with an imperfective viewpoint)

The one sample expression for which a primacy of phasal polarity can be firmly established is Bende *syá-*. Thus, cognates of this prefix are widespread across Eastern Bantu as markers of phasal polarity, but usually without an additional precedence function (Abe2015, Abe2016). Earlier I pointed out that the Bende case always contributes an exhortative force, as seen in (141) above. Example (148) is another illustration.

- (148) Bende
Tu-syá-kola mú-límó.
 SUBJ.1PL-still-do NCL3-work
 i. ‘We are still working.’
 ii. ‘Let us work first.’ (Abe2015)

This element of necessity suggests that the precedence function of *syá-* goes back to statements about persistent intentions or obligations, together with the conventionalization of an erstwhile relevance implicature. For instance, in a case like (148) an assertion that there is work to be done could suggest that once this task has been ticked off, the group can turn their attention to whatever the addressee has in mind. Support for this interpretation comes from a comparable configuration in Holoholo (not in my sample) that features the cognate prefix *ki-*. This construction, illustrated in (149) marks a “process that must take place before another one” (Coupez1955).³⁷ This scenario is very similar to one of the pathways I suggest in Section 3.3.3 for the “further-to” use of German *noch* and Hills Karbi *-làng*, except that what is profiled here is the contrast with subsequent situations, rather than cohesion with preceding ones.

³⁷In the original French, “procès qui doit se dérouler avant un autre”.

2.4 Broadly adverbial temporal-aspectual functions

(Coupez1955, glosses added)

The sample data suggest another pathway from phasal polarity STILL to 'first, for now'. As I pointed out initially, the two functions overlap in contexts that feature an exhortation to the effect that an already existing situation be preserved, such as in (138) above, or in (150). Closely related are attestations like (151), where it is the semantics of the predicate 'leave the tips' that includes an element of causation. What is more, this predicate by itself entails the seamless continuation of a prior state. The contribution of the additional STILL expression with its requirement for an alterable situation, can then, via the maxim of quantity, be taken to indicate 'for the time being'.

(150) Cavineña

E-ra=tu ani-sha-ya=jari.
1SG-ERG sit-CAUS-IPFV=still

'I will retain him (lit. make him sit) **some more time**'

1SG already trunk=OBJ carve INTERJ edge=OBJ 1SG still leave

'I carved (cut off) the base, I still [for the time being] left the tips.'

(Visser2021b)

From instances like (150, 151) it is only a very narrow gap to an example like (152), where a new preliminary state is established. In other words, there is a continuum running from 'let/make still be' to 'let/make be for now' and ultimately 'do/be for now'.

'Dexolo aquí por agora, después acabaré de tratar dello en su lugar. [I'll leave it at this for now, I'll finish talking about it afterwards, in due time]' (Carochi1645, glosses added)

2 Temporal and aspectual uses

Turning to the reverse direction, a development from marking precedence to phasal polarity **STILL** has been proposed by **vanBaar1997** for *-raq* and its equivalents across Quechuan. This seems plausible for several reasons. To begin with, it would provide for a motivated and direct link to the temporal restrictive function ‘no earlier than’ of Huallaga-Huánuco Quechua *-raq* and its congeners, illustrated in (153), namely as a separate extension rooted in ‘first *p*, (then) *q*’.

- (153) Huallaga-Huánuco Quechua
Ñaka-y-ta-raq *tari-sha.*
take_long_time-INF-ADV-still find-ANT.3
'He found it only after he had searched a good while.' (Weber1993)

Secondly, the transparent origin of Western Shoshoni *ekisen* in ‘right now’ and that of Wardaman *gayawun* in ‘pertaining to now’ point in the same evolutionary direction.³⁸ Lastly, the data on Culina *-kha* suggests that this expression is currently in the transitional stage. As I discussed earlier, even when marking persistence, *-kha* appears to often evoke notions of restrictive ‘only’ or of relational ‘before ...’. This was seen in (147) above; example (154) is another illustration.

- (154) Culina

A: *Ami wadani?*
'A mãe está dormindo? [Is mother sleeping?]'
B: *Nowe ra-ni hapi na-kha-ni.*
3:not_be AUX-DECL.F bathe 3:AUX-still-DECL.F
'Não (está), ela ainda está tomando banho (antes de logo aparecer)
[No she isn't, she's still bathing (before showing up after)]
(Tiss2004)

Presumably, in this scenario the acquisition of a persistive meaning component goes back to the recurrent use of an expression in contexts that involve pre-established states or processes together with an imperfective viewpoint. Again, a conceivable bridge can be found in instances where a preliminary continuation of a situation is at stake, such as in (138), repeated below. Another type of context that could have played a role is illustrated in (155). Here, the at-issue content corresponds to the mid-point in a development. This not only allows for a contrast with a later stage at which the process has become completed. Crucially, it also

³⁸Outside of my sample *vanderAuwerla1998* lists Lithuanian *dar* < *darab* ‘now’ and *vanBaar1997* indicates that *napy* in the Siberian isolate Nivkh could go back to a deictic element *na* and *by* ‘only’.

2.4 Broadly adverbial temporal-aspectual functions

entails a prior process leading from ‘raw’ to ‘half cooked’ (for more discussion of phasal polarity and scalar predicates, see Section 2.2.2).

- (138) Huallaga-Huánuco Quechua

 ‘El mote está todavía a medio cocinar. Todavía no se revienta / The muti
 is still half cooked. It has not yet cracked open.’ (WeberEtAl2008,
 glosses added)

Lastly, examples (138, 155) also contain an adjacent, negated clause and thereby illustrate another point. Thus, it is likely that the development from ‘first, for now’ to marking phasal polarity STILL went together with signalling NOT YET via ‘not for now, not at first’. This is an independently attested strategy, an example being Bambara *fɔlɔ* in (156). Such a configuration can easily be reinterpreted as STILL $\neg p$ and most expressions in Table 2.11 participate in signalling NOT YET together with a negator (the exceptions being Bende *sya-* and Classical Nahuatl *oc*).

2.4.5.2 Sequencing ‘and then’

Introduction In this subsection, I discuss a use in which a STILL expression marks a subsequent event in a series ‘and then, afterwards’. The Bukiyp example in (157) is an illustration. Here, *wotak* signals that the situation depicted in its host clause ‘look at the betel nut’ is intended to occur after, and is tied to, the one depicted in the preceding clause.

2 Temporal and aspectual uses

(157) *Bukiyip*

Context: a boy has climbed up a betel nut tree to look for betel nuts.

Trying to split one open, he got stuck by a wasp. A bystander shouts.

‘Throw down one betel nut and I’ll [then] take a look at it.’

(ConradWigoga1991, glosses added)

Note that the sequencing use differs from the additive one I discuss in Section 3.3.1 in the temporal ordering it establishes. For instance, example (158) features Mandarin Chinese *hái* as ‘in addition, also’, but does not entail that ironing the tablecloth follows the chores described in the preceding clauses. Lastly, the function I address here also differs from the use of STILL expressions as coordinators (Section 3.3.6), in that it does not establish a syntactic relationship between clauses.

(158) Mandarin Chinese

Zhāngsān dǎsǎo le fángzi, zuò le dàngāo hái yùn le zhuōbù.

Z. sweep PFV house do PFV cake still iron PFV tablecloth

‘Zhangsan a balayé la pièce, a fait un gâteau et aussi/même repassé la nappe. [Zhangsan swept the room, baked a cake and also ironed the tablecloth]’ (Donazzan2008)

Distribution in the sample Table 2.12 lists the four expressions in my sample that have the sequencing use. As can be gathered, they stem from unrelated languages and three distinct macro-areas. Except for the case of Kekchí, where the sequencing function is marked by a polymorphemic collocation, all instances involve small, grammatical words. Lastly, the inclusion of Kaba *bbáy* here is somewhat tentative. Although MoserDingatoloum2007 list *ensuite* ‘afterwards’ and *puis* ‘then’ as senses of this expression, there are no clear-cut instances of a sequencing use in the data I consulted. However, the existence of this function has been established beyond doubt for the cognate item *báy/bí* in the other two Western Sara languages, Laka and Nagambay (Keegan2014; Thayer1978; Vandame1963). I therefore resort to illustrations from these varieties.³⁹

³⁹In addition; Huang2007 (Huang2007, Huang2008) suggests that Saisiyat *nahan* possesses a sequencing function. Both his description and the few available examples, are however, compatible with the additive use that the same expression has.

2.4 Broadly adverbial temporal-aspectual functions

Table 2.12: Event sequencing

Macro-area	Language	Expression	Collocate	Appendix
Africa	Mundang	<i>bà</i>		B.9.1.3.2
	Kaba	<i>bbáy</i> [*]		B.7.1.3.3
North America	Kekchí	<i>toj</i>	<i>toja'~toje'~tojo' naq</i> 'still.SUBORD SUBORD'	E.5.1.3.2
Papunesia	Bukiyip	<i>wotak</i>		F.3.1.4.1

* With qualifications; see discussion.

A closer look A first illustration of the sequencing use has been given in (157) above. As in that example, this function typically involves the juxtaposition of two clauses, and the situations depicted in the two clauses often form a pair of preparation and culmination. In fact, the Laka and Ngambay cognates of Kaba *bbáy* commonly figure in a fixed pattern [[p *bá*] [q *bbáy/bí*]] ‘*p* first, *q* still’, i.e. ‘first *p* then *q*’. This is illustrated in (159, 160).

- (159) Laka

'Ils le frappaient pendant longtemps, puis ils l'ont laissé. [They were hitting him for a long time, then they left him]'
(Keegan2014, glosses added)

While such bi-clausal patterns are a certainly a common theme with the event sequencing use, they do not constitute a hard-and-fast rule. For instance, in the Bukiyip example (161) the initial ‘fixing the road’ event is elaborated upon in a sequence of clauses before turning to its culmination.

- (161) Bukiyip
- Énech ch-ú-lib wichap,*

Bai wotak ch-ú-tanomoli gen.

FUT still SUBJ.NCL8.PL-IRR-return:VEN again

¹⁰‘And then they will return.’ (Conrad Wigoga 1991, glosses added)

In Kekchí, the sequential use is often understood as marking an immediate or sudden development, as in (162). In structural terms, it is noteworthy that it involves a form *toja'* (or its regional variants *toje'*, *tojo'*), which is an irregular merger of the STILL expression *toj* and the subordinator *naq*, and which also forms an integral part of a near past construction (Section 2.4.6.1). I return to this point below.

- (162) Kekchí
Naq x-e'-raq-e' chi x-b'anunk-il, toja'
 SUBORD PFV-3PL-finish-PASS COMP POSS.3SG-do-NMLZ still.SUBORD

 SUBORD PFV-3PL-start COMP PFV.3SG-burn-NMLZ
 'When they finished doing that, then (immediately) they began to burn it.' (Kockelman2020)

In the case of Mundang *bà* all relevant attestations in Elders2000's (Elders2000) grammar involve future situations, as in (163). This is another point that I return to below.

- (163) Mundang
Sóó mó cūl bē, nà pɔ̂ò-n mèngwáá bā.
 millet SIT germinate ANT 1PL.INCL work-IPFV first_plowing still
 ‘Quand le mil aura germé, nous ferons le premier labour. [Once the
 millet has germinated, we will do the first plowing]’ (Elders2000)

Lastly, given that the use I discuss here does not involve persistence of one and the same situation, it does not require a viewpoint that is fully contained in it, nor need the latter necessarily extend in time. On the contrary, this function is commonly found in conjunction with a perfective viewpoint, as well as with achievement predicates, such as in (160–162).

2.4 Broadly adverbial temporal-aspectual functions

Discussion The sequencing function bears an obvious similarity to the concept of STILL in that it involves the accumulation of temporal intervals. Thus, comparable to how the concept of STILL involves an advanced runtime of the situation depicted in the clause, the use I discuss here involves the accumulation of sub-parts of one contiguous and overarching situation. This is schematically illustrated in Figure 2.4, using a perfective viewpoint for ease of illustration.

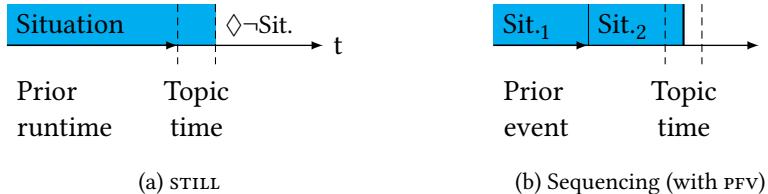

Figure 2.4: Graphic illustration of sequencing use

Unfortunately, the history of most items in Table 2.12 remains obscure, except for Kekchí *toj*. Therefore I can only make educated guesses concerning more concrete links to the same expressions as markers of phasal polarity. To begin with, there is the distinct possibility that the two functions constitute separate developments out of a common ancestor, insofar as relevant sources figure in the known etymologies of other STILL expressions. For instance, Hebrew *ṣadayin* is most likely from Aramaic *?edayin* 'then, thereupon' (TsirkinSadan2019 and references therein) and, outside of my sample, Levantine Arabic *baṣd* has its lexical source in 'behind, after' (TaineCheikh2016). Another conceivable nexus lies in an iterative/restitutive function, as there is a known connection between 'again' and the marking of sequential events (e.g. MoyseFaurie2012; Zhang2017). This repetition function is attested for Kaba *bbáy* and its Laka and Ngambay cognates (Moser2004; Vandame1963; examples throughout Keegan2014). In this scenario, an example like (164) could constitute a critical context, in that it involves both a restitution of the subject's location and what can be read as the preparation and culmination stages of one overarching event of cyclical motion.

(164) Ngambay

M-āo bá m-ā dè béri.

SUBJ.1SG-go first SUBJ.1SG-FUT come still

'Je pars et je reviendrai. [I'm going and I'll come back.]'

(Vandame1963, glosses added)

Featuring a future event, example (164) also illustrates yet another possible source for the sequencing use. Thus, the relevant Kaba/Laka/Ngambay expressions, as well as Mundang *bà*, also have a prospective 'eventually' function. This

2 Temporal and aspectual uses

use shares a key ingredient with the one I discuss here in marking the continuity of an overarching course of events that culminates in the situation depicted in the clause. As I discuss in Section 2.4.4, the prospective function finds a motivated source in phasal polarity STILL plus contexts of a persistent prediction, where scope ambiguity can lead to a reanalysis of ‘can/must still ...’ as ‘can/must ... eventually’. In other words, there is a conceivable cline running from STILL via prospective ‘eventually’ to the sequencing function, and throughout all stages of which there is stable semantic core of temporal advancement. This would yield a motivated explanation for the fact that all relevant examples of Mundang feature unactualized, pending situations. Although the two functions can be differentiated synchronically on the basis of their inflectional compatibilities (the ‘eventually’ use, but not the sequencing one requires either the potentialis or the optative mood), there are attestations like (165) which are compatible with both.

- ‘Dilue d’abord cette bouillie, avant que tu commences à la boire.’ [Dilute this gruel first, and then you start drinking it] (Elders2000)

Lastly, a somewhat different pathway appears to be at play in the case of Kekchí *toj*. Earlier I pointed out that the sequencing construction in this language involves *toja’~toje’~tojo’*, an irregular merger of the STILL expression *toj* and the subordinator *naq*. Its second constituent part is another, uneroded instance of *naq*. This was seen in (162), repeated below. Example (166) is another illustration.

- (162) Kekchí
- | | | | | | |

2.4 Broadly adverbial temporal-aspectual functions

Toja' and its dialectal variants also form an integral part of a near past construction, which is illustrated in (167). As I discuss in Section 2.4.6.1, one possible interpretation of the latter construction involves *toj* in yet another function, namely as a temporal restrictive 'no earlier than', i.e. '(it is) not until now/then (when) ...'. A sequencing function can easily be derived from the same meaning. In this case, the link to phasal polarity STILL is a fairly indirect one. As Kockelman2020 points out, across all these uses, however, there is again a stable core in the form of temporal progress leading up to a certain point in time.

(167) Kekchí

Toje' *x-c'ulun* *arin Cobán.*
still.SUBORD PFV.3SG-arrive here C.

'Hace poco que vino aquí a Cobán. [He **just recently** came here to Cobán]' (EachusCarlson1980, glosses added)

2.4.6 Degrees of temporal remoteness

In this subsection, I discuss uses of STILL expressions that pertain to the degrees of temporal remoteness of a past or future situation. The examples in (168, 169) are illustrations. In (168), Tunisian Arabic *māzāl* combines with an adverbial clause introduced by *kif* 'when/how' that features a verb in the perfective aspect paradigm. This collocation signals an immediate past situation. In (169), Western Shoshoni *ekisen* narrows down the future time frame to one in the vicinity of the speaker's now.

(168) Tunisian Arabic

Znīxā uxt-i *māzāl-t* *kif* *xdā-t.*
Z. sister-POSS.1SG still-3SG.F when/how take_spouse.PFV-3SG.F
'Meine Schwester Zulayxa hat eben erst geheiratet [My sister Zulayxa just recently got married, lit. my sister Zulayxa is still when/how she married]' (Singer1984, glosses added)

(169) Western Shoshoni

Ekisen tahma-to'i-han-to'i.
still spring-emerge-RES-FUT
'Pretty soon it's going to be spring.' (CrumDayley1993, glosses by McLaughlin2012)

As in (168, 169), the relevant readings all arise in specific collocational contexts, which I lay out in more detail below. Note that in I do not consider transparently

2 Temporal and aspectual uses

compositional cases in which a STILL expression has scope over a stative predicate that expresses a degree of temporal distance, as in (170).

- (170) English

It is still recent that the Gators found out they are taking on Arkansas and Texas A&M this season. (found online)

That said, a borderline case is found in Maybrat. In this language, the combination of the STILL expression *fares* and *tna* ‘new, recently’ is a transparently compositional way of marking a near past situation; see (171). However, this collocation has become strongly conventionalized and, what is more, the originally bipartite structure appears to have merged to a single clause. Lastly, for a discussion of STILL expressions as focus-sensitive scalar operators ‘as late/early as, as far removed as’, see Section 2.5.2.3.

- (171) Maybrat

Au ma-ama tna fares iye.

3U 3U-come new still too

‘She also came **very recently**. (lit. She came, it is still recent too)’

(Dol2007)

In what follows, I first examine the predominant case in the sample, namely the marking of temporal proximity in the past (Section 2.4.6.1). I then move on to a discussion of future-oriented uses (Section 2.4.6.2).

2.4.6.1 Past proximity

Introduction The Tunisian Arabic example (168), repeated below, illustrates a past degrees-of-remoteness construction centred around a STILL expression. Here, *māzāl* combines with an adverbial clause that contains a verb in the perfective aspect paradigm, together signalling that the situation in question took place just recently.

- (168) Tunisian Arabic

Znīxā uxt-i māzāl-t kīf xđā-t.

Z. sister-POSS.1SG still-3SG.F when/how take_spouse.PFV-3SG.F

‘Meine Schwester Zulayxa hat eben erst geheiratet [My sister Zulayxa just recently got married, lit. my sister Zulayxa is still when/how she married].’ (Singer1984, glosses added)

2.4 Broadly adverbial temporal-aspectual functions

Like the Tunisian *māzāl kī(f)* construction, all relevant instances in the sample data involve a near past. This constitutes a crucial difference to the marking of degrees of temporal remoteness in the future; see Section 2.4.6.2.

Distribution in the sample Table 2.13 lists the seven expressions in my sample that are involved in signalling past proximity. As can be gathered, this function is attested in genetically unrelated languages from Africa, North America, and Papuasia. In terms of their composition, two cases (featuring Tunisian Arabic *māzāl* and Kekchí *toj*) involve syntactically complex constructions.

Table 2.13: Near past collocations

Macro-area	Language	Exp.	Collocate	Appx.
Africa	B.-G. Datooga	<i>údu-</i>	Non-future tense inflection plus telic predicate	B.3.1.3.2
	Bende	<i>syá-</i>	Perfective aspect inflection	B.4.1.4.2
	Tunisian Arabic	<i>māzāl</i>	<i>Kī(f)</i> 'when' plus perfective aspect inflection or participle	B.18.1.5.1
North America	Gitxsan/Nisga'a	<i>k'ay</i>	Achievement predicate or <i>hlis</i> 'finish'	E.3.1.3.1
	Maricopa	<i>-haay</i>	Perfective aspect inflection or achievement predicate	E.6.1.3.1
	Kekchí	<i>toj</i>	<i>Naq</i> 'SUBORD' plus perfective aspect inflection	E.5.1.3.1
Papuasia	Western Dani	<i>awo</i>	Intermediate past inflection or non-finite medial clause	F.18.1.4.1

In the following discussion, I first examine the aspectual and temporal characteristics of the near past use in some more detail, to then address the question of its functional motivation and lastly sketch out conceivable diachronic pathways.

A closer look: the viewpoint Like the Tunisian Arabic example (168), all attestations of near past use appear to involve an anterior viewpoint, that is to say, a topic time which is fully contained in a situation's aftermath (Section 1.6.3). Against this backdrop, is worthwhile taking a brief look at the collocates listed in Table 2.13 and their position in the respective tense-aspect systems to lay the ground for the following discussion. As this summary will show, all cases involve verbal paradigms that have an anterior viewpoint as one of their readings. In some cases, the aspectual viewpoint is determined by the predicate's telicity,

2 Temporal and aspectual uses

or boundedness on the lexical/phrasal level (Section 1.6.3.1).⁴⁰

Thus, in Bende, Kekchí, Maricopa, and Tunisian Arabic, near past construals mainly involve with what is termed the “perfect(ive)” in the respective descriptive traditions. For Bende, Kekchí, and Tunisian Arabic, the available grammatical descriptions indicate that these inflections have an anterior viewpoint among their functions (Kockelman2010, Kockelman2020; NurseData; Singer1984). Maricopa is harder to judge, but the examples throughout Gordon1986 do not preclude an anterior viewpoint. In Tunisian Arabic, the near past use is also attested with certain predicative participles, which likewise allows for anterior readings (RittBenmimoun2014; Singer1984). The case of Gitsyan/Nisga'a *k'ay* plus *hlis* 'finish' can be subsumed here, as well.

In Western Dani, the near past use of *awo* are attested in two contexts. The first of these consists of verbs in the intermediate past inflection, as in (172). The exact range of viewpoints that this verbal paradigm has is unclear, but it stands in opposition to specifically continuous and habitual constructions (Barclay2008); I address the question of its status as a tense below.

(172) Western Dani

<i>Ndi awo aret</i>	<i>k-inom</i>	<i>nogo yo-gotak</i>	<i>kenok, roti</i>
and still	INTENS	2PL-with sleep do-INTERM.PST:SUBJ.2PL if	bread
<i>noo-rak</i>	<i>meek</i>	<i>o.</i>	
eat-INTENTIVE	cannot	DM	

'And if you have just slept with them (women), you must not eat the bread.' (Barclay2008)

The second Western Dani context consists of an uninflected medial clause in a clause chain. There is only one such instance in my data; see (173). This example features a telic predicate with an anterior viewpoint in the past, i.e. a pluperfect reading. Without further data, it is not clear whether *awo* could also yield a near past in the same syntactic environment plus plus an atelic predicate, or whether

⁴⁰Outside of my sample, Ngemba (Bantoid) *wí* constitutes what, at first sight, appears to be a counterexample. This auxiliary-like marker, which often translates as 'still' takes (as far as inflected verbs are concerned) only imperfective complements, yet it can have a 'have just Verb-ed' reading. However, as Mekamgoum2021 states, *wí* "is not semantically dedicated to phrasal polarity as it originally conceptualizes the notion of 'just' or 'venir juste de' in French; it refers to a non-continuative event that takes place a short time prior to the reference time". In other words, the relevant readings are not determined by the aspectual inflection of *wí*'s syntactic complement, but by the viewpoint of the larger clause. In broad strokes, an imperfective viewpoint yields persistence, whereas 'have/had just Verb-ed' arises in non-imperfective contexts.

2.4 Broadly adverbial temporal-aspectual functions

this combination would invariably yield phasal polarity STILL. Other examples of medial clauses (without *awo*) throughout Barclay2008's (Barclay2008) grammar suggest that there is at minimum a correlation between telicity and viewpoint.

- (173) Western Dani

It in-eebe awo tawe pag a iniklom no-mba-kwi,
 3PL POSS.3PL-body still unmarried at enjoyment OBJ.1SG-think-PL

 'When they were still unmarried (young) they loved me, while the woman had just been united to a husband, like she (a woman) usually unites with a husband, they loved me ... Concerning all those things they did long ago, I am always remembering them.' (Peter Barclay, p.c.)

This brings me to those cases where the aspectual viewpoint is directly linked to the telicity of the predicate. Thus, in Barabaiiga-Gisamjanga Datooga, the STILL expression *údu-* leads to a neutralization of most tense-aspect oppositions to future vs. non-future. In this configuration, atelic predicate with affirmative polarity predictably bring about an imperfective viewpoint plus STILL, whereas telic predicates in the affirmative non-future yield the near past construal (telic predicates in the future yield 'again').⁴¹ Example (174), featuring the adverb *qám-nà* 'now', suggests that the viewpoint in this case is anterior.

- (174) Barabaiiga-Gisamjanga Datooga

'I've never heard this; I've just heard it now.' (Mitchell2021)

Variations on the same theme can be found in two of the relevant North American languages, Maricopa and Gitsxan/Nisga'a. In Maricopa, the perfective-imperfective opposition in realis mood only applies to durative predicates. With

⁴¹As far as can be judged from the examples in Kiessling2000 and Rottland1982, telic predicates without *údu-* can have habitual, progressive and bounded past interpretations, depending on context.

2 Temporal and aspectual uses

punctual predicates, realis mood without overt aspect inflection invariably yields a bounded viewpoint (Gordon1986), which is one of the contexts in which the near past reading arises. In the same vein, Gitsxan/Nisga'a achievement predicates per default go along with a non-imperfective viewpoint (JohansdottirMatthewson2007) and nothing precludes the assumption that this includes an anterior perspective.

A closer look: no true past tense The question of the aspectual viewpoint leads me to another shared characteristic across near past uses. In (173) above, the collocation of Western Dani *awo* plus a medial clause does not relate to utterance time, but involves a past-in-the-past reading ‘...had just been...’. The past tense itself, in the sense of an anchoring of topic time before utterance time (Section 1.6.3.1) is established by the following verb in the distant past inflection. Similar cases are attested for the relevant constructions in Gitsxan/Nisga'a, Kekchí, and Tunisian Arabic, as shown in (175–177). These examples illustrate also illustrate another point, which relates back to the question of an anterior viewpoint: where I have data from narrative discourse, the near-past use is exclusively found in background clauses.

- (175) Gitsxan/Nisga'a

The observations just made are in line with the fact that the relevant verbal paradigms are not inherently tensed. While the case of B.-G. Datooga *údu-* involves the non-future tense, the only contribution of the latter is that topic time is no later than utterance time. The one possible exception to the rule is the Western Dani “intermediate past” inflection illustrated in (172) above. This form primarily stands in opposition with a distant past that appears to be more strongly dissociated, to use a term from BotneKershner2008. It is possible that the Western Dani intermediate past is either purely aspectual (an anterior aspect), or that it establishes an ordering between time of utterance and the time of the situation. The latter is the analysis made by CableGikuyu for certain remoteness inflections in the Bantu language Gikuyu (not in my sample).

Discussion I now turn to the question of functional motivation and possible diachronic pathways. Speaking in the most general terms, phasal polarity **STILL** and the near past use share a common denominator in the notion of continuity. Thus, the former highlights the connection between an earlier runtime of an ongoing situation and topic time, while contrasting it with its possible discontinuation (Section 1.4.1). Similarly, the near past use can be understood as depicting a terminated situation as being contiguous with utterance time (or some other salient evaluation time), as opposed to a more detached past occurrence.

As far as diachrony is concerned, it is likely that the use of the relevant expressions as exponents of **STILL** predates their past function; I address the possible exception of Kekchí *toj* below. The strongest support for this assumption comes from Tunisian Arabic *māzāl* and Bende *syá-*. *Māzāl* transparently goes back to a verbal paraphrase ‘has not ceased’, which is found as a **STILL** expression across several other varieties of Arabic, but without having the near past function there (FischerEtAlTunisian and references therein). Similarly, cognates of Bende *syá-* serve as phasal expressions across Eastern Bantu, but typically do not have the near past use either (Abe2015, Abe2016). Evidence is slightly weaker for Maricopa *-haay*, in that cognates of this marker across River Yuman consistently

2 Temporal and aspectual uses

serve as phasal polarity markers, though Quechan *-xay* also has the the additional near past use (Halpern1946; Munro1974; MunroEtAl1992). In the same vein, the cognates of Western Dani *awo* in its closest relatives appear to uniformly function as persistive expressions (Burung2007; ZoellnerRiesberg2017; examples throughout Burung2017 and Fahner1979). Lastly, evidence of the more indirect type comes from Gitsxan/Nisga'a. In this language, polar questions containing *k'ay* in near past function are only felicitous if the speaker knows that a situation of the type depicted in the clause has indeed taken place. That is, what is at issue is the situation's recency; see (178). As Aonuki2021 points out, this peculiarity can be understood as a carry-over from the prior time presupposition that forms part of the semantics of STILL. In other words, it mirrors how 'are you still sleeping?' presupposes 'you were sleeping'.

- (178) Gitsxan/Nisga'a

✓ Context: Mary's dog had recently run away. You run into her and see that she has her dog, looking excited and happy.

Context: ... You don't know if she found it yet.

K'ay=t 'wa=s Mary=hl us-t=aa?
 still=3 find=CONN M=ASSOC dog=POSS.3=Q
 'Did Mary just find her dog? (Aonuki2021)

Against this backdrop, there are at least two conceivable pathways leading from STILL to a near past construal. Recall from Section 1.4.1 that the phasal polarity concept requires a pre-existing situation that has i) been going on through to the time under discussion and which ii) can potentially come to an end. The near past use, on the other hand, seems to always involve an anterior viewpoint. That is, topic time is fully in contained in the situation's post-time (Section 1.6.3.1), which is, furthermore, normally an invariably state-of-affairs.⁴² One way of reconciling these two elements is by projecting the notion of persistence away from the situation itself onto the impermanent length of time subjectively characterized by the situation's prior occurrence, such as the post-wedding phase in (168, 176). In slightly more technical terms, the STILL expression acquires the function of a temporal frame adverb, in that it restricts the time under discussion to one within the situation's temporal region ("the ... varying environment which each

⁴²"If Mary eats lunch, then there is a state that holds forever after: the state of Mary's having eaten lunch" (Parsons1990).

2.4 Broadly adverbial temporal-aspectual functions

time span has ‘around itself’”; Klein1994).⁴³ A schematic illustration of this mapping is given in Figure 2.5. An argument in favour of this scenario comes from Tunisian Arabic, where the near past construction involves the STILL expression *māzāl* as a predicate that takes a temporal clause as its complement ‘SUBJ is still when s/he Verb-ed’, that is to say ‘... is still in the time of having Verb-ed’. Assuming continuity of the temporal region would also explain the use of an event time adverbial in (179). Admittedly, however, this is the only example of STILL-as-near past with such an adverbial that I am aware of.

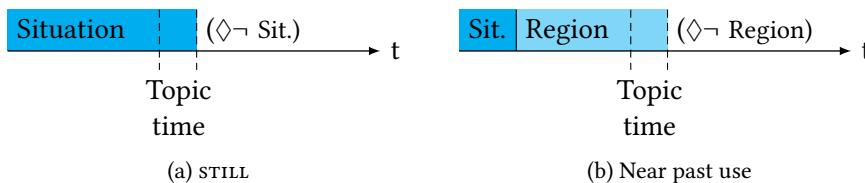

Figure 2.5: Schematic illustration of the near past use based on the situation’s temporal region

- (179) Tunisian Arabic

Famma āna māzāl kī tfallam-t il-žim²ftīn it-tāli
 EXIST 1SG STILL when learn.PFV-1SG ART.DEF-week.DU to-back
kilmit gahhāf. Mā-kun-t-š n-aʃraf-ha.
 word(F) scrounger NEG-COP.PFV-1SG-NEG 1SG-know.IPFV-3SG.F

‘For example, I only learned the word *gahhāf* ‘scrounger’ two weeks ago. I didn’t know it before.’ (TuniCo, cited in FischerEtAlTunisian)

A different pathway has been proposed by Aonuki2021 for Gitsxan/Nisga'a. In her scenario, what is shared between the concept of STILL and the near past use is the presupposition that the situation’s prior runtime abuts topic time. Given that the anterior viewpoint features a perspective fully contained in the situation’s post-time, this means that the entire runtime of the situation immediately precedes topic time. Put differently, the near past use goes back to depicting a situation as (if it had been) unfolding until the time under discussion ‘have been Verb-ing until now/then’. This proposal would also be in line with Abe2015’s (Abe2015) translation of several of the relevant Bende examples as ‘have just finished’. In slightly more technical terms, this pathway establishes a relationship

⁴³ Alternatively, and to the same effect, one could assume that anterior aspect denotes a state brought about by the closure of a situation and that the latter is coerced into a transient property of the S/A argument.

2 Temporal and aspectual uses

of adjacency between topic time and the time of the situation; Figure 2.6 is a graphic illustration.

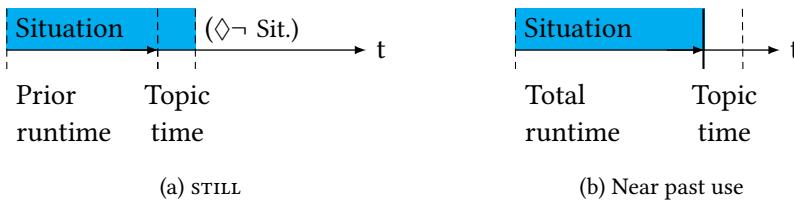

Figure 2.6: Schematic illustration of the near past use based on an abutting runtime

While the two pathways differ in the underlying mechanisms, they both ultimately yields a construal of a subjectively near, terminated situation. What is more, there is significant convergence between the two scenarios: in many contexts a topic time that falls immediately after a situation's runtime will also be fully included in the situation's temporal region. In fact, both scenarios may have played some role in the case of Kekchí *toj*. To briefly recapitulate, in this language the near past use involves a construction that consists of the **STILL** expression *toj* in clause-initial position plus a subordinate clause containing a verb in the perfective aspect inflection. This was seen in (176) above, and (180) is another illustration. Note that in this use, the sequence of *toj* and the subordinator *naq* is normally reduced to *toja'~toje'~tojo'*.

- (180) Kekchí
- Toje' x-c'ulun arin Cobán.*
still.SUBORD PFV.3SG-arrive here C.
'Hace poco poco que vino aquí a Cobán. [He just recently came here to Cobán]' (EachusCarlson1980, glosses added)

In its composition, the Kekchí near past construction thus bears a striking structural similarity to the Tunisian Arabic pattern *māzāl kif* '(is) still when ...'. This interpretation finds support in another Mayan language, Tzeltal. Here, the cognate form *=to* participates in a very similar construction, the only major difference being that deranking is achieved through a non-finite form of the verb instead of clausal subordination (Polian2013); see (181a) for illustration. What is more, Tzeltal possesses an analogous construction that is based on the **ALREADY** expression *ix* and which signals a near future. The latter pattern, illustrated in (181b), could easily go back to 'S/A is already in the region of Verb-ing'.

- (181) Tzeltal

2.4 Broadly adverbial temporal-aspectual functions

- a. *Lok'-el-on=to*.
leave-INF-1=still
'Acabo de salir [I just left].'
- b. *Poxtay-el-on=ix*.
cure-INF-1=already
'Estoy a punto de que me curen. [I'm **about to** be cured]'
(Polian2013)

At the same time, Kekchí differs from the expressions discussed so far in that it also has use as a temporal restrictive marker 'no earlier than'. This function surfaces, *inter alia*, in the context of the perfective aspect inflection (Section 2.5.2.1). Crucially, the restrictive use of *toj* often blends into a positional or sequential reading, such that the situation depicted in its host clause takes place right after the state-of-affairs denoted in its complement has come into existence. This is shown in (182)

- (182) Kekchí
- Nek-e'-xik sa' li tz'oleb'al toj wan r-e waqib' chihab'.*
PRS-3PL-go PREP DET school still EXIST.3SG 3SG-DAT six year
'They go to school **when** they are six years old.' (Kockelman2020)

As pointed out by Kockelman2020, the near past function of *toj* could be derived from the restrictive use in conjunction with a contextually retrieved topic time instead of an overt complement '(it is) not until now/then (that) S/A has Verb-ed'. This would align the Kekchí case with Aonuki2021's proposal: if a given time is the earliest that a situation can be depicted as completely over, then the total runtime of the situation immediately precedes this interval. It also yields a motivated explanation for the occasional attestation of the type illustrated in (183) throughout SamJuarezEtAl2003's (SamJuarezEtAl2003) dictionary. Here, *toja'* (or one of its variants) goes together with an imperfective present, marking the onset of a new situation.

- (183) Kekchí
- Toja' yo chi nume'k in-'oj.*
still.SUBORD do.PRS.3SG COMP pass POSS.1SG-cough
'Hasta ahora se me está quitando el catarro. [Only now my cold is passing]' (SamJuarezEtAl2003, glosses added)

While deriving the Kekchí near past construction from the restrictive function requires the stipulation of temporal zero anaphora, this would not come out

2 Temporal and aspectual uses

of thin air. Thus, the restrictive use can be traced back to yet another function namely limitative ‘until’, which also constitutes the most likely source for *toj* as an exponent of STILL. Crucially, this development requires the same anaphoric mechanism ‘until now/then, *p*’ > (at topic time) still *p*’ and is also tied to a fixed, clause-initial position. In addition, examples similar to the one in (184) may have played a role. Here, *toja*’ plus perfective inflection patterns together with the two preceding clauses in depicting the setting of a new narrative scene. It is conceivable that, at an earlier stage, such constellations were, compatible with two readings, one as adverbial modifiers based on the restrictive use ‘(not until) when thirteen days had passed ...’ and an alternative parsing involving two equally ranked assertions ‘thirteen days had just passed (and) ...’

- (184) Kekchí

Context: Lord B’alamq’e had announced he will be back in thirteen days.

The preceding scene evolved around certain objects at the house.

Kach’inaq ix ch’ool aj eechal kab’l. Naxuwak.

‘The owner of the house is timid (her heart is small). She is scared.’

Toja’ ki-num-e’ ox-kuja kutan ki-r-il
 still.SUBORD PFV.EVID:3-pass-PASS three-ten day PFV.EVID:3.U-3.A-see
na-nach’ok qaawa’ b’alamaq’e.
 PRS.3-near HON B.

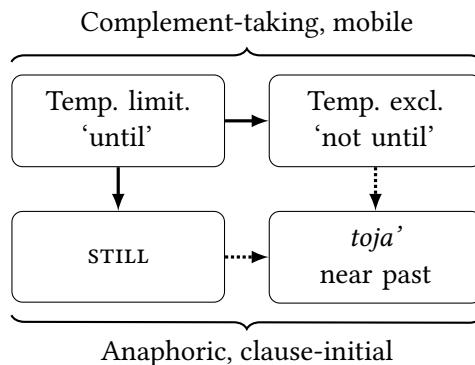

‘When thirteen days had passed, she saw Lord B’alamq’e approaching.’
 (Kockelman2010)

The relationships and similarities between the various uses of *toj* just outlined are summarized in Figure 2.7. More comparative work on Mayan is necessary to disentangle the mutual influence that each of the functions of this expression and its cognates had on each other throughout their history.

2.4.6.2 Degrees of remoteness in the future

Introduction Having discussed STILL expressions as markers of temporal proximity in the past, I now turn to uses that are related to degrees of temporal remoteness in the future. These are found with two sample expressions, Chuwabu =*vi* and Western Shoshoni *ekisen* (Appendices B.5.1.3.2, E.9.1.3.1). In the Chuwabu case, this yields a near future, whereas in the Western Shoshoni case it marks a distant time to come. In what follows, I examine both cases separately.

2.4 Broadly adverbial temporal-aspectual functions

Figure 2.7: Hypothetical, partial diachronic network for Kekchí *toj*

A closer look and discussion: Western Shoshoni *ekisen* In Western Shoshoni, the **STILL** expression *ekisen* can combine with the future tense to narrow down the time frame to a proximal one. Example (185) is an illustration.

- (185) Western Shoshoni
Ekisen tahma-to'i-han-to'i.
 still spring-emerge-RSLT-FUT
 'Pretty soon it's going to be spring.'
 (CrumDayley1993; glosses by McLaughlin2012)

This near future reading is not directly related to *ekisen* as an exponent of **STILL**, but is a relict of the expression's history. Thus, *ekisen* can be segmented into *eki* 'now' and an exclusive marker *-seN*. In other words, its etymological meaning is 'now, to the exclusion of other times'. From this, a reading of proximity falls out in a straightforward manner: *ekisen* functions as a time frame adverbial, restricting the time of the anticipated situation to one in the general vicinity of utterance time. *Ekisen* in (185) is thus no different from the transparent *yaningi=nyali* in the Gooniyandi example (186).

- (186) Gooniyandi
Yaningi=nyali thithiwalimi
 now=still/only I_am_going
 'I'm going right now.' (McGregor1990)

This interpretation finds support in the available data on Western Shoshoni's close relative Panamint. In this language, the cognate item *üküsü* serves as a fully

2 Temporal and aspectual uses

compositional, emphatic version of *ükü* ‘now’, with the expected effect in combination with a future tense verb. Crucially, however, Panamint *üküsü* has not developed into a STILL expression (cf. Dayley1989Dictionary, Dayley1989Grammar).

A closer look and discussion: Chuwabu =vi The last case to be addressed is that of Chuwabu =vi. According to Guerois2021, when this clitic is combined with a future tense verb, it suggests a later occurrence than the same verb without the enclitic. Consequently, it fares better in combination with distal event time adverbials like ‘next week’, such as in (187), than with more proximal ones like ‘today’ or ‘tomorrow’. Based on the available data, it is not clear what motivates this peculiarity. Possibly, this is actually a case of an ‘eventually’ reading (Section 2.4.4). Alternatively, it might be in some way related to =vi in its additional function as an exclusive operator ‘only’ (Section 3.4.2), placing emphasis on the future tense.

- (187) *Ddi-neel-óó-gulá=vi má-fúgi sumaán'*
 SUBJ.1SG-FUT.AUX-NCL15(INF)-buy=still NCL6-banana NCL9.week
éejw' éé-η-d-a=wo
 DEM.NCL7/9 SUBJ.NCL7/9-IPFV-come-REL=NCL16(LOC)
 'I will buy bananas next week.' (Guerois2021)

2.5 Temporal connectives and modifiers

2.5.1 Introduction

In the following subsections I discuss various kinds of uses within the larger domain of temporal connectors and modifiers. I first survey those instances in which a **STILL** expression serves as a modifier of temporal adverbials (Section 2.5.2). Such uses include, among other things, functions as time-scalar additive operators ‘as early/late as, as far removed as’. Subsequently, I discuss uses pertaining to the modification of temporal clauses (Section 2.5.3), for instance **STILL** expressions as markers of simultaneous duration.

2.5.2 Modifications of positional temporal frame expressions

In this subsection, I discuss several uses in which a **STILL** expression modifies a positional temporal adverbial. This is typically an adverb in the strict sense, but can also be another constituent in the same function. While this constituent may

2.5 Temporal connectives and modifiers

be an embedded clause, it need not be, which is a key difference to the clause-modifying uses I discuss in Section 2.5.3. In the first type of function as an adverbial modifier, a **STILL** expressions serve as time-scalar restrictive operators ‘not until’ (Section 2.5.2.1). In another type (Section 2.5.2.2), the relevant expressions combine with a temporal positional adverbial and signals that “that the event in question occurs while the time specification is still valid” (Loebner1989). In yet a third type, a **STILL** item serves as a focus-sensitive scalar operator that relates a time frame to alternative times, (‘as early/late/far removed as’), making it a type of scalar additive operator (Section 2.5.2.3). In addition to these recurring functions, one item, Kekchí *toj* also serves as limitative ‘until’. I discuss this in the context of the restrictive use, to which it is likely related on the diachronic plane (Section 2.5.2.1).

2.5.2.1 Temporal restrictive (and limitative)

Introduction In this subsection, I address a use in which a **STILL** expression serves as a scalar restrictive operator whose focus is a temporal constituent. In my sample, such a ‘not until’ function is found with two expressions, namely Huallaga-Huánuco Quechua *-raq* and Kekchí *toj* (Appendices G.3.1.5.1, E.5.1.4.2). In what follows, I illustrate and discuss each case separately.

A closer look and discussion: H.-H. Quechua *-raq* The examples in (188) illustrate Huallaga-Huánuco Quechua *-raq*. In (188a) this item modifies the temporal clause ‘when the harpist and violinist play for them’ and signals that all alternative times under consideration (all earlier times) would lead to a false proposition. This fact is also pointed out explicitly in the following sentence. The same function can be seen in (188b), but with a nominal complement.

(188) Huallaga-Huánuco Quechua

- a. ... *dansa-n arpista bigulista tuka-pa-pti-n-raq.* Mana
dance-3 harpist violinist play-BEN-SUBORD.ADV-3-still NEG
tuka-pti-n-qa mana dansa-n-chu.
play-ADV-POSS.3-TOP NEG dance-3-NEG
‘... they dance **when and not until** the harpist and violinist play for them (and not before). If they do not play, they do not dance.’
- b. *Ishkay killa-raq haru-shka:*
two month-still step-ANT.1
‘**It was two months before** I stepped on it (a disjointed ankle).’
(Weber1989)

2 Temporal and aspectual uses

The temporal restrictive function of *-raq* forms the basis of several idiomatic phrases. Among these, *chay-raq-shi* ‘that-still-EVID’, i.e. ‘it is only then’ stands out in coming close to ‘finally’ and thereby to a marker of the unexpectedly late scenario of **ALREADY**.⁴⁴ This fixed phrase is illustrated in (189).

(189) Huallaga-Huánuco Quechua

Context: an old man has been suspecting that his wife cheats on him.

... *isha-n qaqasha.* *Awkin-na-shi* *ollqo-yka-n*
 two-3PL be_parallel-PTCP old_man-already-EVID be_angry-PFV-3

ruru-lla-pa-qa. *Chay-raq-shi awkin* *ollqo-yka-n.*

inside-just-GEN-TOP that-still-EVID old_man be_angry-PFV-3

‘The two of them are together (the old man’s wife and her lover). At that, the old man becomes angry, but just inside. **Finally, only then**, did the old man become angry.’ (Weber1989)

The most likely link between *-raq* as a temporal restrictive operator and the same item as a marker of phasal polarity is found in yet a third function of this item, namely as ‘first, for now’. I discuss this question in some more detail in Section 3.4.4.

A closer look and discussion: Kekchí *toj* Moving on to Kekchí, example (190) illustrates the **STILL** expression *toj* in its function as a time-scalar restrictive marker; for an example of the same function with a clausal argument, see (191) below.

(190) Kekchí

Toj ewu t-in-xik.

still afternoon PROSP-1SG-go

‘I’ll go [no earlier than] in the afternoon.’ (Kockelman2020)

Often-times, the restrictive use of *toj* is understood as establishing a topic time immediately after the coming-into-existence of the state-of-affairs depicted in its complement. This is shown in (191).

(191) Kekchí

Nek-e'-xik sa' li tz'oleb'al toj wan r-e waqib' chihab'.

PRS-3PL-go PREP DET school still EXIST.3SG 3SG-DAT six year

‘They go to school **when they are six years old.**’ (Kockelman2020)

⁴⁴See Kramer2017 and references therein on the three scenarios of **ALREADY**.

2.5 Temporal connectives and modifiers

Unlike Huallaga-Huánuco Quechia *-raq*, Kekchí *toj* also functions as a temporal limitative marker ‘until’ (Appendix E.5.1.4.1). For the most parts, there is a clear division of labour between these two functions.⁴⁵ Thus, restrictive *toj* is primarily found in environments of affirmative polarity and a non-continuous viewpoint, as in (190, 191). The limitative function, on the other hand, is found in two types of contexts, comparable to English *until* (see Lakoff1969). The first are environments of affirmative polarity and in which the duration of a situation is at stake, typically with a continuous viewpoint, as in (192a). The second type are contexts of clause-mate negation; see (192b).

(192) Kekchí

- a. *Toj maak'a'-q chik in-k'as t-in-k'anjelaq.*
still NEG.EXIST-NON.SPECIFIC more POSS.1SG-debt PROSP-1SG-work
‘Until I no longer have debt I will work.’
 - b. *Ink'a' nek-e'-xik sa' li tz'oleb'al toj wan r-e waqib' chihab'.*
NEG PRS-3PL-go PREP DET school still EXIST.3SG 3SG-DAT
six year
‘They do not go to school until they are six years old.’
- (Kockelman2020)

Crucially, limitative ‘until’ within the scope of a negator can be understood as equivalent to a restrictive operator; see, for instance, Koenig1991 on English *not until*, as well as deSwartEtAl2022 for a discussion of different compositional analyses of this and comparable items. This fact suggests the temporal restrictive function of *toj* goes back to the association of limitative ‘until’ with negated predicates, from where it would have spread to affirmative contexts with a non-continuous viewpoint.⁴⁶ Functional motivation for this scenario can be found in usage patterns. As Kockelman2020 points out, in continuous discourse both ‘until’ and restrictive ‘not until’ tend to go along with a constellation of two states-of-affairs, one that lasts until the time denoted by *toj*’s complement, and a second situation that takes place no earlier than that. With this overlap in mind,

⁴⁵It is safe to assume that *toj* as temporal ‘until’ constitutes the source of its function as a phasal polarity expression. Presumably, this involved zero anaphora, which is a recurrent theme across several uses of this marker. Outside of my sample, a similar situation appears to be held true of *gardi* in the Australian language Bardi (Nyulnyulan); see Bowern2012.

⁴⁶A similar case is found in Mesoamerican varieties of Spanish, where *hasta* ‘until’ with temporal expressions can mean ‘not until’ (RAEDictionary). This suggests an areal dimension to the phenomenon.

2 Temporal and aspectual uses

in-between contexts are readily found in the data. The first are elliptical utterances like the one highlighted in (193). In such a context, what would have originally been the elision of a negative predicate ‘there is no speaking...’ could easily be reinterpreted as featuring an affirmative one ‘only tomorrow there is...’.

- (193) Kekchí

- A: *Maak'a' li aatinak hoon rik'in laawixaqil?*
 ‘There is no speaking with your wife today?’
- B: *Ink'a'.*
 ‘No.’
- A: *Toj kab'ej?*
 still tomorrow
 ‘(Not) until tomorrow?’
- B: *Eq'ela kab'ej.*
 ‘Early tomorrow’ (Kockelman2020)

A similar case, albeit from narrative discourse, is shown in (194). Here, the initial clause again establishes a negative state. In addition, the clause following the one in question depicts a subsequent event that yields a change to the contrary. Crucially, the underlying temporal and causal relationships are the same no matter whether *toj* and its clausal complement are understood as continuations of the first sentence and the situation depicted therein (‘... wasn’t pleased until he placed the rat...’) or if they are read as establishing a new unit (‘only when he placed the rat ... it improved’).

- (194) Kekchí

- Maa-min ki-hu[u]lak* *chu r-u* *qaawa' b'alamq'e,*
 NEG-EMPH PFV.EVID.3SG-arrive PREP POSS.3SG-face HON B.
toj ki-x-k'e *li ch'o chi (x)-sa'* *li po,*
 still PFV.EVID:3SG.P-3SG.A-give DET rat PREP POSS.3SG-inside DET moon
ut li ch'o aran ki-chu'uk, *jo'ka'in*
 CONJ DET rat there PFV.EVID:3SG-urinate thus
ki-usa.
 PFV.EVID:3SG-improve
 ‘In no way was Lord B’alamq’e pleased, but when [lit. (not) until] he placed the rat inside the moon, and the rat peed there, then it improved.’ (Kockelman2010)

2.5 Temporal connectives and modifiers

Lastly, *toj* as restrictive ‘not until’ might play some role in the Kekchí near past construction (Section 2.4.6.1) and a formally related event sequencing construction (Section 2.4.5.2).

2.5.2.2 Persistent time frame

Introduction In this subsection I discuss a use in which a STILL expression syntactically and semantically associates with a temporal frame adverbial and signals that “that the event in question occurs while the time specification is still valid: ‘it is still T, when e occurs’” (Loebner1989).⁴⁷ Example (195) is an illustration. Here, German *noch* signals that the event of leaving for Boston takes place before the end of the time span described in its sister constituent *am Abend meiner Ankunft* ‘on the evening of my arrival’.

- (195) German

Context: about a trip to the USA. The speaker did not want to be stuck in New York.

So bin ich noch a-m Abend
 thus COP.1SG 1SG still at-ART.DEF:DAT.SG.M evening(M)
meiner Ankunft ... nach Boston ge-fahr-en.
 POSS.1SG:GEN.SG.F arrival(F) to B. PTCP-drive-PTCP

‘Thus, the very evening of my arrival I went to Boston.’ (Rheinischer Merkur, cited in Shetter1966, glosses added)

The meaning of the associated constituent need not be strictly temporal. Example (196) illustrates space-to-time metonymy. Lastly, as far as syntax is concerned, the expression’s complement may also be an embedded clause; see (199, 205) below for illustrations.

- (196) German

Er wurde noch a-m Unfall-ort
 3SG.M become.PST.3SG still at-ART.DEF:DAT.SG.M accident-place(M)
operiert.
 operate-PTCP

‘He was operated right at the scene of the accident.’
 (Duden, glosses added)

⁴⁷See Vandeweghe1992 for a similar characterization.

2 Temporal and aspectual uses

Distribution in the sample (and beyond) Table 2.14 lists the markers in my sample for which the persistent time frame use is attested. As can be gathered, it is found with four expressions from four distinct languages, all from western Eurasia. Outside of my sample, this use is also attested for Dutch *nog*, many cognates of Serbian-Croatian-Bosnian *još*, Danish *endnu*, Finnish *vielä*, and Hungarian *még*.⁴⁸ Further research pending, this suggests an areal pattern of Central, Northern and Eastern Europe plus, perhaps, the Caucasus. The case of Hebrew *sod* can most likely be explained through influence from West Germanic and Slavic.

Table 2.14: Persistent time frame use

Macro-area	Language	Expression	Appendix
Eurasia	German	<i>noch</i>	D.3.1.5.1
	Hebrew (Modern)	<i>sod</i>	D.4.2.5.1
	Lezgian	<i>hele</i> [*]	D.8.1.4.1
	Serbian-Croatian-Bosnian	<i>još</i>	D.11.1.5.1

* Only one example in the data.

Note that Table 2.14 does not include the occasional tokens from Australia and Papunesia, such as in the Wubuy example (197), all of which involve the items in question as markers of an emphatic assertion of identity (see Section 3.4.2).

(197) Wubuy

Context: about preparing mangrove fruits. The fruits have been roasted.
 Ng^a *adaba wirima:dini*, *adaba a:guguwuy*
 and_then then they_took_it_out.CONT then to_water
wirima:ralhalwulhan^gi, *wirima:ralhalwulhan^gi yimbaj-bugij*, *adaba*
 they_soaked_it_all.CONT they_soaked_it_all.CONT today_still then
yimbaj-bugij *wirima=dhurma*:
 today_still they_crushed_it.CONT

‘Then they (people) took them out of the oven and put them in fresh water to soak. **On the same day** (i.e. a few hours later) they began to grind the fruits.’ (Heath1980)

⁴⁸See Rombouts1979 and Vandeweghe1992 on Dutch *nog*. For the Slavic cases, see i.a. SSSJ, PWN, SSKJ, SSJC, Komarek1979 and Mustajoki1988. Information on Danish *endnu* and Hungarian *még* comes from DDO and BarcziOrszagh1992, respectively. Finnish *vielä* is discussed in Mustajoki1988.

2.5 Temporal connectives and modifiers

Similarly, Table 2.14 does not include Udihe *xai(si)* in attestations like (198). As in this example, all relevant instances involve the collocation with an anaphoric demonstrative of the (*u*)*t*-series. This pattern has developed a more widely productive ‘same’ function, which I assume to be at play here. For a discussion of this use, see Section 2.2.5.

(198) Udihe

Ni: lä baza gele lali:nzi budei, zeude ei diga ilama neñini, uti ni:we mene e:tigi mene ñenezenei <mene ñenezenei>

‘Many people in the taiga die from hunger. If a human doesn’t eat anything for three days, the tiger directs this person to where it has to go.’

Xai uti dogbo-ni uti xokto-tigi-ni ñene-wen'e uti
 still that night-POSS.3SG this road-LAT-POSS.3SG go-CAUS.PFV this
ni:-we xebu-ini.
 man-ACC take-3SG

‘It will direct him to the road **the very same night** and lead this person.’
 (NikolaevaEtAl2019)

A closer look: meaning and appropriateness conditions I now turn to a closer examination of the meaning of the persistent time-frame use and the conditions for its felicitous employment. This will help to delineate it further from the superficially similar time-scalar additive uses that I discuss in Section 2.5.2.3 (‘as early/late as, as far removed as’). As I hinted at above, the use I discuss here signals the continuity of a time frame in essentially the same way that phasal polarity **STILL** does for the main predication of a clause. This parallel is graphically illustrated in Figure 2.8, using a perfective vantage point for ease of illustration.

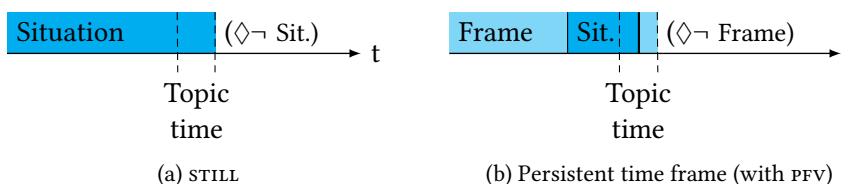

Figure 2.8: Schematic illustration of persistent time-frame use

Consequently, the persistent time frame use requires a contextually salient topic time for which the persistence of the time span in question can be evaluated (cf. Boguslavsky1996).⁴⁹ For instance, in (199) topic time is narrowed down

⁴⁹Also see Greenberg2008 for a discussion of **STILL** and established topic times.

2 Temporal and aspectual uses

through the discourse topic of how to behave when having received a termination notice plus world knowledge that dismissals in Germany do not normally have immediate effect. This setting is anaphorically referenced by the associated constituent of *noch*, the clause *während man arbeitet* ‘while you’re employed’ and it is stressed that the affected reader should pay a visit to the job centre before the end of this period.

(199) German

Context: on how an employee should behave when your work contract has been terminated.

Also, noch während man arbeit-et und sobald man weiß, wann so, still while IMPR work-3SG and once IMPR know.3SG when der letzte Arbeit-s-tag sein soll: zu-r ART.DEF:NOM.SG.M last-NOM.SG.M work-LNK-day(M) COP.INF should.3SG Arbeitsagentur geh-en.
 to-ART.DEF:DAT.SG.F job_centre(F) go-INF

‘So, while [it is still the time that] you’re employed and as soon as you know when your last day at work is scheduled: visit the job centre.’
 (found online, glosses added)⁵⁰

To give another example, in (200) the preceding text establishes an interval around the right temporal edge of receiving the good news. It is then highlighted that narrative time does not progress further than this.

(200) Serbian-Croatian-Bosnian

Context: a student with the ardent desire to become a doctor did not get accepted into medical school at the first try. He applied again, and good the good news that this time he was accepted in Berlin got to him while he was travelling.

*Još sledećeg dana je oputovao za Berlin
 still next.GEN.M day(M).GEN COP.3SG leave.PFV.PTCP-SG.M for Berlin
 jer je semestar već počinjao.*
 because COP.3SG semestre(M).NOM.SG already begin.IPFV.PTCP-SG.M
 ‘The very next day he set off for Berlin, because the semestre was about to begin.’ (found online, glosses added)⁵¹

⁵⁰<https://www.verdi.de/service/fragen-antworten/++co++3f41ec44-a247-11e0-42ae-00093d114afd> (26 April, 2022).

⁵¹<https://arhiva.vesti-online.com/Vesti/Zanimljivosti/63714/Pozarevljanin-buduci-vrhunski-berlinski-lekar> (08 February, 2023).

2.5 Temporal connectives and modifiers

The denotation of *sledećeg dana* ‘the next day’ in (200) can be said to be included in the interval adjacent to the decisive event, and exchanging it for something more removed like *tri dana kasnije* ‘three days later’ would render the sentence infelicitous, as shown in (201a). The same holds true for the corresponding German and Modern Hebrew translations in (201b, 201c).

(201) Context: same as (200)

a. Serbian-Croatian-Bosnian

Jos tri dana kasnije je otpovoda-o.
still three day.GEN.GEN after COP.3SG leave.PFV.PTCP-SG.M

b. German

Noch drei Tag-e danach brach er auf.
still three day-PL thereafter break.PST.3SG 3SG.M off

c. Modern Hebrew

fod le-ahar šlo'ša yamim hu fazav.
still to-after three day.PL 3SG.M leave.PST.3SG.M
(intended: ‘... before the end of the third day he set off.’)
(personal knowledge; Itamar Francez and Stefan Savić, p.c.)

Likewise, the examples in (202) are unusual, “unless it is clear that for independent reasons reference is implicitly to the day after tomorrow” (Loebner1989; also see Boguslavsky1996).

(202) a. German

? *Sie komm-t noch übermorgen.*
3SG.F come-3SG still day_after_tomorrow

b. Modern Hebrew

? *Hi t-agiaf fod mohratayim.*
3SG.F 3SG.F-arrive.FUT still day_after_tomorrow

c. Serbian-Croatian-Bosnian

? *Ona će stići još prekosutra.*
3SG.F AUX.FUT:3SG arrive.PFV.INF still day_after_tomorrow
'She'll arrive the very day after tomorrow.' (Loebner1989; Stefan Savić and Itamar Francez, p.c.)

The requirement for an established and salient topic time constitutes a key difference to the time-scalar additive uses that I discuss in Section 2.5.2.3, where topic time is an open variable. The second critical difference is more subtle. Thus,

2 Temporal and aspectual uses

while the persistent time frame use often gives rise to a scalar notion of earliness (e.g. Duden; Helbig1994; Loebner1989), this is best understood as a derived inference, at least on the synchronic plane. Like phasal polarity STILL, this use evokes an alternative course of events at which the interval in question has ceased to be valid, hence later times (Vandeweghe1992). To give just one example, in (200) the protagonist might have waited a day or two until heading off to Berlin. Such a consideration of later alternatives can be enforced by the temporal constituent receiving focus (Beck2016, Beck2020). That relative earliness is not part of the conventional meaning becomes apparent when comparing an example like (200), repeated below, to a version where the STILL expression has been exchanged for an ALREADY expression functioning as a temporal focus particle. As shown in (203) for Serbian-Croatian-Bosnian *još*, this substitution introduces an overtly scalar notion that is not inherent to the original text; see Mustajoki1988 and Rombouts1979 for similar observations.

- (200) Serbian-Croatian-Bosnian

Još sledećeg dana je oputovao za Berlin.

still next.GEN.M day(M).GEN COP.3SG leave.PFV.PTCP-SG.M for Berlin

‘The very next day he set off for Berlin.’ (found online, glosses added)

- (203) *Več sledećeg dana je oputovao za Berlin.*

already next.GEN.M day(M).GEN COP.3SG leave.PFV.PTCP-SG.M for Berlin

‘As early as the next day he left for Berlin.’ (Stefan Savić, p.c.)

What is more, and as shown in (204) for German *noch*, a reading of an unexpected early timing is defeasible in just the same way that a reading of unexpected lateness is defeasible with phasal polarity STILL.

- (204) German

Noch a-m Vor-mittag ist Lydia, wie von

still at-ART.DEF:DAT.SG.M pre-noon(M) COP.3SG L as from

all-en erwart-et, ab-ge-reis-t.

all-DAT.PL expect-PTCP off-PTCP-travel-PTCP

‘Lydia left [while it was still] in the morning, as everyone expected.’

(Beck2020)

Lastly, given that the notion of persistence pertains to the time frame rather than to the situation depicted in the host clause, the persistent time-frame use neither requires a durative situation, nor an aspectual perspective that is fully contained within it. In fact, this function normally goes together with a perfective or anterior viewpoint, as in (195, 196) and in (199–206).

2.5 *Temporal connectives and modifiers*

A closer look: a recurring usage pattern Shetter1966 observes that German *noch* in the persistent time frame function is recurrently found together with expressions of precedence.⁵² In narrative texts, this is often a temporal clause that depicts a non-occurrence, as in (205). This is, to all appearances, also at play in the Lezgian example (206). This pattern is clearly motivated by the fact that the discontinuation of the time-frame, and hence the eventual actualization of the event in question, are not entailed, but merely constitute a conceivable alternative scenario (Section 1.4.1). As the free translation ‘even before’ in (205, 206) indicates, the relevant instances also tend to give rise to the now familiar scalar inference.

(205) German

Aber noch ehe sie die Tür hinter sich schließen konnte, hat-te sich jener mit letzter Kraft von dem Griff des Brandenburger-s los-gerissen.
 inhabitant_of_Brandenburg(M)-GEN loose-tear.PTCP
 ‘But before she even had the chance to close the door behind herself, that man had freed himself from the grip of the man from Brandenburg.’
 (von le Fort, *Die Verfemte*; cited in Shetter1966, glosses added)

(206) Lezgian

Hele zun akwa-daldi, am q^hfe-na.
 still 1SG.ABS see-CVB:before 3SG.ABS leave-AOR
 ‘Even before she saw me, she left. / *Noch ehe sie mich sah, ging sie weg.*’ (Haspelmath1991)

For Russian *ešcë*, which is not included in my sample, Mustajoki1988 points out that such combinations are not licensed. The same appears to be true of its Serbian-Croatian-Bosnian cognate *još*, as well as of Modern Hebrew *sod*. In both cases, this is probably due to pre-emptive blocking by a time-scalar additive use ‘as far removed as’ of the same markers. These are the subject of Section 2.5.2.3.

Discussion As the preceding exposition has shown, there is a very close resemblance between the persistent time frame use and phasal polarity STILL. The key

⁵²Also see Rombouts1979 on the Dutch cognate *nog*.

2 Temporal and aspectual uses

difference is that the notions of persistence and a subsequent discontinuation do not apply to the situation depicted in the clause, but to the time-frame denoted in the expression's complement. This was schematically illustrated in Figure 2.8 above. The question of the exact conditions leading to the emergence of the persistent time frame use is a task for future diachronic corpus research. The key most likely lies in the type of adverbial modification found in examples like (207). The main difference is that with the use I discuss in this subsection a property of time is at stake, whereas (207) features a secondary predication about the subject.

(207) German

Context: after a longer trip to Africa, the narrator has decided to become a wildlife ranger. Now she has returned to Germany and doubts are creeping in.

 glosses added)

2.5.2.3 Time-scalar additive

Introduction In this subsection, I discuss STILL expressions as a type of focus-sensitive scalar operator that relates the denotation of a temporal frame expression to lower-ranking alternatives (see Section 1.6.4 for general discussion). Example (208) illustrates such a time-specific scalar additive function. Here, French *encore* modifies the prepositional phrase *en 2003* and relates its denotation to a set of earlier, alternative topic times.

(208) French

Encore en 2003, Vincent aurait voté oui à l'europe.
 still in 2003 V. have.COND.3SG vote.PTCP yes to ART.DEF:SG-Europe
 'As late as 2003, Vincent would have voted yes to Europe.'
 (MosegaardHansen2008, glosses added)

2.5 *Temporal connectives and modifiers*

While in (208) the alternatives under consideration are earlier times, one can also find the opposite, namely the focus being related to later times. Example (209) is an illustration.

- (209) Lezgian

Jusuf hele naq' *ata-na.*
 Jusuf still yesterday come-AOR
 'Jusuf came as early as yesterday.' (Haspelmath1991)

Despite the differences in the relative ordering of times, examples (208) and (209) both involve a scale of time proper, or calendric values. STILL expressions in the relevant function can also operate in a scalar model of temporal distance. These instances consistently feature less distant alternatives 'as far removed as', such as in (210). This example also illustrates another point: the associated constituent need not be a temporal adverbial phrase, but location in time can be mediated by metonymy. Lastly, while (208–210) feature nominal and prepositional phrases as complements, the same function is also attested with an embedded clause as the modicum; see (236) below for an illustration.

- (210) Serbian-Croatian-Bosnian

otkriti postojanje gravitacijskih valova.
 uncover.PFV.INF existence.ACC.SG gravitational.GEN.PL wave.GEN.PL
 'But even though (someone as far removed as) Einstein postulated them, until now physicists have failed to detect the existence of gravitational waves.' (found online, glosses added)

Distribution in the sample Table 2.15 lists the six expressions in my sample for which time-scalar additive functions are attested. In terms of their geographic distribution, it is striking that all cases come from western Eurasia.⁵³ As is to be expected from this part of the world, (see *vanderAuwerla1998*), they all involve independent grammatical words. When it comes to the specific semantic types, all relevant expressions except Modern Hebrew *sod* have a use that involves a

⁵³The same functions are also found with several cognates of my sample expressions, such as Dutch *nog* (e.g. *Vandeweghe1992*) or cognates off Serbian-Croatian-Bosnian *još* across slavic (e.g. *Boguslavsky1996*; *PWN*; *CYM11*; *Komarek1979*; *Mustajoki1988*).

2 Temporal and aspectual uses

scale of time proper. Of these five cases, four exclusively relate to earlier alternatives, making them a type of BEYOND operator (Section 1.6.4). One item, Lezgian *hele* can relate the denotation of its focus to earlier as well as to later alternatives. This means that no expression in my sample constitutes a time-scalar BENEATH operator, i.e. one that exclusively refers to earlier alternatives. One item, Serbian-Croatian-Bosnian *još*, can operate both on a scale of calendric values, as well as on one of temporal distance. In either use *još* presupposes lower alternatives (earlier times and less removed times, respectively). Lastly, Modern Hebrew *sod* only has the ‘as far removed as’ use.

Table 2.15: Time-scalar additive uses

M.-area	Language	Expr.	Type	Appx.
Eurasia	French	<i>encore</i>	‘as late as’	D.2.1.6.1
	German	<i>noch</i>	‘as late as’	D.3.1.5.2
	Hebrew (Modern)	<i>sod</i>	‘as far removed as’	D.4.2.5.2
	Lezgian	<i>hele</i> [*]	‘as late as’, ‘as early as’	D.8.1.4.2
	Serbian-Croatian-Bosnian	<i>još</i>	‘as late as’, ‘as far removed as’	D.11.1.5.2
	Spanish	<i>todavía</i>	‘as late as’	D.13.2.6.1

^{*} Lezgian *hele* also serves as an ALREADY expression; see discussion below.

To the list in Table 2.15 one could add Spanish *aún*. Example (211) illustrates this expression in an attestation that is both structurally and semantically comparable to my initial examples. As in (211), such instances of *aún* most commonly involve earlier relata, although this expression is also occasionally attested with later alternatives (Appendix D.13.1.5.1). Crucially, however, *aún* has a generalized use as a scalar additive operator ‘even’. Instances like (211) can be understood as instantiation of this function which just so happen to involve time-related foci (conceivably, though, they receive additional motivation from the pathway that I discuss below).

- (211) Context: from a text about the origins of jewellery. The preceding sentences discusses talismans in pre-history.

y aún en la Edad Medi-a ... a-l uso de

otorg-aba divers-a-s propiedade-s.
 assign-PST.IPFV.3SG diverse-F-PL property(F)-PL
 ‘and as late as in medieval times ... the use of certain precious stones

2.5 *Temporal connectives and modifiers*

was (still) associated with a number of properties.' (found online, glosses added)

Lastly, most of the relevant sample languages also have an **ALREADY** expression with a time-scalar additive function. These appear to invariably operate on a scale of calendric values, relating the focus to later times ('as early as'). This is illustrated in (212) for French *déjà*. The outlier is found in the more complex case of Lezgian, where the expression *hele* itself has nearly completed transformed from a **STILL** expression to an **ALREADY** expression.

(212) French

Déjà à l'âge de sept ans, elle lisait
 already at ART.DEF:SG-age of seven year-PL 3SG.F read.PST.IPFV.3SG
le latin sans problème-s.

ART.DEF:SG.M Latin without problem-PL

'Already at the age of seven, she read Latin without any problems.'
 (MosegaardHansen2008, glosses added)

In what follows, I examine each of the time-scalar uses in more detail. I begin with the majority type 'as late as' and then address the 'as early as' use of Lezgian *hele*. After that, I turn to the distance-based use 'as far removed as'.

A closer look: the 'as late as' use As I pointed out above, all relevant expressions that have a use involving a scale of times proper allow for an 'as late as' reading. Example (208), repeated below, is an illustration. Here, the focus value of 2003 is set in relation to earlier alternatives from the common ground. Involving past times, these earlier alternatives are further removed from the temporal origo, which allows for a derived reading of a comparatively recent time.

(208) French

Encore en 2003, Vincent aurait voté oui à l'europe.
 still in 2003 V. have.COND vote.PTCP yes to ART.DEF:SG-Europe
 'As late as 2003, Vincent would have voted yes to Europe.'
 (MosegaardHansen2008, glosses added)

In future contexts, on the other hand, it is the earlier alternatives that are more proximal. With future reference, 'as late as' operators can thus be read as referring to a relatively distant time, as in (213). This yields an overlap in interpretation with the 'as far removed' type of use.

2 Temporal and aspectual uses

- (213) German
Noch in zehn Jahr-en *werd-en* *wir die* *Früchte*
 still in ten year-DAT.PL FUT.AUX-1PL 1PL ART.DEF:ACC.PL fruit.PL
dieser *Entscheidung genieß-en.*
 PROX:GEN.SG.F decision(F) enjoy-INF
 ‘Even in ten years time we will still be enjoying the fruits of this
 decision.’ (Koenig1979)

To gain a better understanding of the functional motivation behind this use, it is worthwhile taking a diachronic perspective. As **Mosegaard Hansen 2008** and **Shetter 1966** have pointed out before me, a bridge from phasal polarity **STILL** to ‘as late as’ can be found in examples of the type in (214). Here, the temporal adverbial refers to a point in time and the viewpoint is imperfective. In communicative terms, there is little difference between *encore* in (214) serving as an exponent of **STILL** or as time-scalar additive ‘as late as’ (with *ex situ* focus). In either case, Vincent’s pro-European stance is normally understood as persisting from an earlier time, but not necessarily beyond the year 2003. A similar case can be found in the recurrent attestations of **STILL** expressions together with adverbs like ‘today’ or ‘now’, as in (215).

- (214) French

 (CORPES XXI, glosses added)

2.5 Temporal connectives and modifiers

In other words, contexts like the ones in (214, 215) allow for a reanalysis of a **STILL** expression as a time-specific scalar additive operator, thereby instantiating the well-known tendency of linguistic change towards procedural and more subjective meanings (Section 1.6.2). In semantic terms, this reinterpretation involves a reversal of dependencies. Thus, with phasal polarity **STILL** topic time is given and the question that is addressed pertains to the situation's polarity. In the 'as late as' use, on the other hand, topic time is the open variable (Krifka2000). What is preserved, however, is the nature of the scale and its orientation. Thus, **STILL** presupposes the unfolding of a situation from an earlier time through to topic time, but not necessarily any further. In the same vein, with 'as late as' the denotation of focus is the highest among the set of calendric values under consideration (MosegaardHansen2008); Figure 2.9 is a graphic comparison.

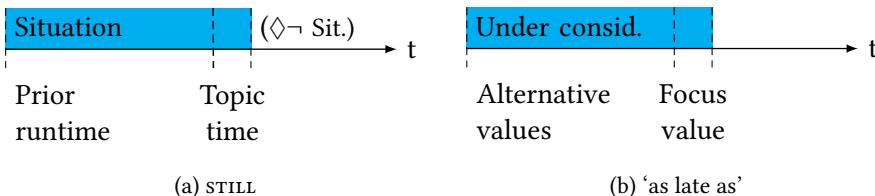

Figure 2.9: Schematic illustration of time-scalar additive use with earlier alternatives

Although contexts like the ones in (214, 215) offer a motivated explanation for the emergence of the 'as late as' use, there are important aspects of meaning in favour of considering it a synchronic function in its own right (*pace* MosegaardHansen2008). To begin with, Beck2020 observes that German *noch* in 'as late as' function plus imperfective viewpoint does not require a prior runtime of the situation in question. Thus, in (216) the speakers did not live in Danbury before the focus value of 1997, yet the sentence does not give rise to any contradiction. This is because what is entailed through the use of *noch* here is merely that the year 1997 yields a more informative answer to the question under discussion than all earlier alternatives. While this stands in sharp contrast to the prior runtime presupposition triggered by **STILL**, it is in line with cross-linguistic findings on scalar additive operators, namely that the truth of the pragmatically weaker context propositions is merely a default assumption (GastvanderAuwera2011; Schwartz2005).

(216) German

Context: we had a Condo in Danbury between March and November 1997.

A: *Wie lange haben wir eigentlich in Mt. Kisco gewohnt?*

'For how long did we live in Mt. Kisco?'

2 Temporal and aspectual uses

B: *So lang kann das nicht gewesen sein.*

‘It can’t have been that long.’

Noch 1997 *hab-en* *wir ja in Danbury ge-wohn-t.*
 still 1997 have-1PL 1PL DM in D. PTCP-reside-PTCP
 ‘As recently as 1997 we lived/were living in Danbury.’
 (Beck2020)

Another difference is found in the fact that the ‘as late as’ use is perfectly compatible with a perfective vantage point, whereas **STILL** is not. This is illustrated in (217); also see (218) below.

(217) French

Encore hier, j’-ai vu le film
 still yesterday 1SG-have.1SG see.PTCP ART.DEF:SG.M movie(M)
La Chute, sur la mort d’-Hitler, que je
 Downfall about ART.DEF:SG.F death(F) of-H. SUBORD 1SG

sorti.
 leave.PTCP

‘Just yesterday, I watched the movie *Downfall*, about the death of Hitler, which I hadn’t been able to watch when it came out.’
 (found online, glosses added)

These differences in meaning furthermore have syntactic repercussions. As is typical of focus-sensitive operators (e.g. Koenig1991), all expressions in question can form a single constituent with their focus, with which they move through the clause. For instance, *noch gestern* in (218) occupies the so-called “forefield position” of the German clause, which can only host a single constituent. Being a syntactic sister to the focus, French *encore* is also attested within more complex syntactic configurations, such as presentative *voilà* and its argument in (219).

(218) German

 appear.PTCP as provocative.F as-forbid.INF ART.DEF:SG.F cigarette(F)
 ‘Only a few months ago the idea would have been as provocative as
 banning cigarettes.’ (Puest-France, cited in Fuchs1993)

To summarize, the time-scalar additive ‘as late as’ function is a diachronic extension of phasal polarity STILL in the context of temporal frame adverbials. From there, it inherits the temporal scale and its orientation. In synchronic terms, this use does, however, differ from its precursor in showing the characteristic syntactic and meaningful traits of scalar focus operators.

A closer look: the ‘as early as’ use One expression in the sample, namely Lezgian *hele*, not only has the ‘as late as’ use just discussed, but also one in which it relates the focus to later alternatives. The examples in (220) are illustrations. In (220a) the calendric value corresponding to *c'erid lahaj* ‘seventeenth century’ is related to earlier alternatives, whereas in (220b) the denotation of *naq* ‘yesterday’ is compared to later times.

(220) Lezgian

- a. *Hele c'erid lahaj asir.d-a fikir-zawa-j xi, ...*
 still seventeen ORD century-INESS think-IPFV-PST DM
 ‘As late as/even in the seventeenth century people (still) believed
 that ...’ (Haspelmath1991)
- b. *Am mus ata-na? – hele naq’.*
 3SG.ABS when come-AOR still yesterday
 ‘When did she come? – As early as yesterday.’
 (Haspelmath1991)

If disambiguation is called for, it appears that Lezgian speakers can resort to using a restrictive operator ‘no earlier than’ to specify a comparatively late topic time, as in (221).

2 Temporal and aspectual uses

(221) Lezgian

Anžax/tek q’we jiqa-n wilik am sağ tir.
 only/only two day-GEN before 3SG.ABS healthy COP.PST
 ‘As recently as/only two days ago she was healthy.’
 (Haspelmath1991)

Unlike the case of Spanish *aún* that I briefly addressed above, the underspecification of *hele* cannot be traced back to a more general scalar additive function. This begs the question of what lies at the heart of this peculiarity. Again, taking a diachronic perspective allows for valuable insights in the form of two possible strains of motivation. First, though *hele* started out as a **STILL** expression, this function has become highly restricted in the present-day language, where the item primarily serves as a marker of **ALREADY**; I discuss this pathway of change in Section 2.3.2. It is not hard to see how the uses with earlier vs. later alternatives might be a reflection of these two functions. In other words, the ‘as early as’ use in (220b) could be understood as no different from the time-scalar use of a more canonical **ALREADY** expression, such as Spanish *ya* in (222).⁵⁴

(222) Spanish

No es nada nuev-o. Ya hace año-s ... pod-ía-mos
 NEG COP.3SG nothing new-M alreday ago year-PL can-PST.IPFV-1PL

fabric-ad-a-s en Taiwan.
 fabricate-PTCP-F-PL in T.

‘It’s nothing new. **Already years ago** ... we’d find fake 8 bit Nintendo and Sega consoles built in Taiwan.’ (CORPES XXI, glosses added)

Another source of the ‘as early as’ use might be the persistent time frame use that I discuss in Section 2.5.2.2. In this function, the expression modifies a temporal frame adverbial and signals the persistence of an established time frame. This often gives rise to a scalar inference of earliness. For instance, in (223) an alternative course of events would have it that the third person argument leaves only after taking notice of the speaker (when it is *no longer* ‘before she [possibly] saw me’). It is conceivable that such an erstwhile inference be conventionalized, thereby giving rise to an ‘as early as’ use; I discuss a partially overlapping scenario below. Quite possibly though, the shift of *hele* from **STILL** to **ALREADY** and

⁵⁴This also seems to be the view taken by Haspelmath1991 (Haspelmath1991, Haspelmath1993), who discusses the ‘as early as’ use under the heading of ‘already’.

2.5 Temporal connectives and modifiers

the earliness inference of the persistent time frame use conspired towards one and the same outcome.

- (223) Lezgian

Hele zun akwa-daldi, am q^hfe-na.
still 1SG.ABS see-CVB:before 3SG.ABS leave-AOR

‘Even before she saw me, she left. / Noch ehe sie mich sah, ging sie weg.’ (Haspelmath1991)

A closer look: the ‘as far removed as’ use As I indicated initially, STILL expressions as time-scalar additives do not always operate on a scale of calendric values. Instead, they can also involve degrees of distance from the temporal origo. In my sample, this use is the found with Modern Hebrew *fos* and Serbian-Croatian-Bosnian *još*. Example (224) illustrates *još*. Here, the denotation of *prije 15 godina* ‘15 years prior’ is related to less removed times, thereby emphasizing the culprit driver’s refractoriness.

- (224) Serbian-Bosnian-Croatian

Obavljenim nadzorom
carry_out.PASS.INST.SG.M supervision(M).INS.SG
utvrden-o je da vozač

driver’s_licence(F).NOM.SG take_away.PFV:PASS.PTCP-SG.F still before 15
godina.
year.GEN.PL

‘Through the investigation it was established that the driver was steering the car although his driver’s licence had been revoked as far back as 15 years ago.’ (found online, glosses added)

Još is, to a certain extent, ambiguous, as it allows for ‘as late as as’ construals, as well. With Modern Hebrew *fos*, on the other hand, ‘as far removed as’ is the only possible relevant interpretation. This is shown in (225).

- (225) Modern Hebrew

a. # *fos ke-adam zaken hu išen harbe.*
still as-man old 3SG.M smoke.PST.3SG.M a_lot

(intended: ‘Even/as late as as an old man he (still) smoked a lot’)

2 *Temporal and aspectual uses*

- b. *fod ke-adam tsafir hu išen harbe.*
 still as-man young.M 3SG.M smoke.PST.3SG.M a_lot
 ‘All the way back as a young man he (already) smoked a lot.’
 (Yael Greenberg, p.c.)

On the basis of (224, 225), one may be tempted to suspect that the use in question is actually an ‘as early as’ one, similar to what I discussed above for Lezgian *hele* and for **ALREADY** expressions. That this is not the case becomes clear once more data are taken into account.⁵⁵ To begin with, there is a marked difference in meaning between the two types of operators, as illustrated in the pairs of examples in (226, 227). While in both cases the situation in question manifests itself at a comparatively early time, the **STILL** expressions in (226) contribute a notion of temporal dissociation that is not found with the **ALREADY** expressions in (227).

- (226) a. Modern Hebrew

 still at six year.GEN.PL know.IPFV.PTCP-SG.F COP.3SG read.IPFV.INF
 Latin.ACC.SG
 ‘As early as at the age of six she could (already) read Latin.’
 (Jurica Polančec and Yael Greenberg, p.c.)

⁵⁵This following discussion owes much to Boguslavsky1996’ (Boguslavsky1996) and Mustajoki1988 (Mustajoki1988) exposition of the parallel facts found with Russian *eščë*, a cognate of Serbian-Croatian-Bosnian *još*.

2.5 *Temporal connectives and modifiers*

These differences become even more pronounced in contextualized attestations where the two sets of expressions cannot be freely swapped, such as in (228, 229). What is at stake in these examples is a forward leap on the temporal axis, and by means of the **ALREADY** expressions *kvar* and *već* the amount of time elapsed is related to greater alternatives. This, in turn, clashes with the ‘all the way back’ notion that the **STILL** expressions *sod* and *još* would provide.

(228) Modern Hebrew

‘However, already in 2012, he found himself in a group of 18 police officials who were suspected of plagiarizing their diploma.’ (found online and Jurica Polančec, p.c.)

The examples I have discussed up to this point all feature past tense contexts. Consistent with the observations there, in the future topic time is construed as more remote than the alternatives under consideration; see (230, 231). This leads to an overlap in interpretation with the ‘as late as’ type of use discussed above.

(230) Modern Hebrew

sod ha-nin-im šel-i ye-šalm-u et
still ART.DEF-great_grandchild-PL POSS-1SG 3-pay.FUT-PL ACC

2 Temporal and aspectual uses

To make sense of **STILL** expressions signalling ‘as far removed as’, it is worthwhile once again taking a diachronic perspective. With a few augmentations, **Mustajoki1988**’s (**Mustajoki1988**) insightful observations on Russian *eščë* can be easily translated into a motivated historical scenario. Thus, **Mustajoki1988** remarks that different contextual manifestations of the ‘as far removed as’ use show varying degrees of conceptual similarity to the persistent time frame use (Section 2.5.2.2). To briefly recapitulate, in this use, which is attested for both relevant items, a **STILL** expression combines with a constituent referring to an established time span and signals “that the event in question occurs while the time specification is still valid: ‘it is still T, when e occurs’” (**Loebner1989**). Example (232) is an illustration.

- (232) Serbian-Croatian-Bosnian
Context: there was an accident involving a truck and a cyclist.

victim(F) COP.3SG die.PTCP-SG.F still at face.LOC.SG place.GEN.SG
'The victim died **right at** (lit. **still at**) **the scene of the accident**.
(Stefan Savić, p.c.)

Taking this function as a point of departure, one may assume a gradual process of context expansion, accompanied by a relaxation of appropriateness conditions and instantiating the tendency for meaning to become more subjective (Section 1.6.2). In a first step, cases like (232) would have provided a model for the use of the relevant items together with foci referring to stages in life, phases in a process, and the like, such as in (225b), repeated below, and in (233). Quite

2.5 Temporal connectives and modifiers

possibly, this was facilitated by cases in which the original requirement for an established, salient topic was satisfied via accommodation.⁵⁶

- (225b) Modern Hebrew

 (found online, glosses added).

A similar transfer would have taken cases like the one illustrated in (234) for German *noch*, which pairs the persistence of an established time frame with the relational notion of precedence, as its model (this seems to not be possible in present-day Modern Hebrew and Serbian-Croatian-Bosnian). The outcome would have been purely scalar instances like (235, 236), which establish a new topic time.

'For he chose us in him (**even**) before the creation of the world to be
 holy and blameless in his sight.' (Eph. 1:4, *Knjiga o Kristu*, glosses added)

Before moving on to the last stages of this scenario, it is worthwhile taking a brief pause and highlighting a few key components. First, the persistent time frame use, which I assume to be the starting point, often gives rise to a scalar inference of earliness. For instance, in the accident example (232) above, it could be imagined that the victim only dies at a later stage, such as after being loaded into an ambulance, or after being brought to hospital. Secondly, the illustrations up to this point all retain what is arguably the essence of phasal polarity, namely the segmentation of a time line into two sequential intervals of contrasting polarity. The first phase includes topic time (< 'while it was still ...') and the second phase includes utterance time or some other salient evaluation time. In other words, an example like (236) can be read as invoking a contrast between the 'then' before the creation of the world and the 'now' at which it exists, hence an subjective element of temporal distance. The same holds true, *mutatis mutandis*, of (225b, 233, 235). A schematic illustration is given in Figure 2.10.

Support for the interpretation just outlined comes from German. Though the German STILL expression *noch* does not generally have the 'as far removed as' use, it can acquire a strikingly similar reading in a very specific set of contexts, namely when the temporal origins of a persistent state-of-affair are at stake (Appendix D.3.1.5.3).⁵⁷ This is illustrated in (237), which features the perhaps prototypical

⁵⁷ According to Mustajoki1988, the same usage is attested for Finnish *vielä* (not in my sample).

2.5 Temporal connectives and modifiers

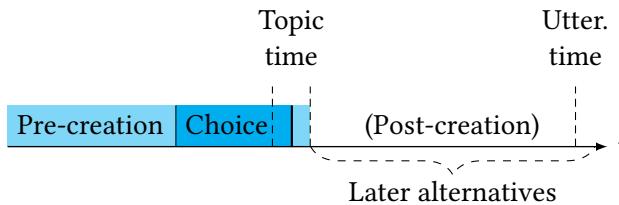

Figure 2.10: Schematic illustration of (236)

case, the verb–particle collocation *stammen...aus* ‘stem from’. In examples like this, *noch* arguably fulfils a twofold function (Shetter1966). On the one hand it does its usual job of providing the main proposition with phasal polarity (‘I had and continue to have a shyness...’). At the same time, it can be read as associating with the temporal predication about the source of the state (‘...from when I was still in the army’). The union of this two interpretations yields a reading of remnant object from a bygone era.

(237) German

Ich habe eine natürliche Scheu vor Polizisten und Staabsoffizieren.

‘I have a natural shyness of policemen and staff officers.’

Das stamm-t noch aus meiner Militärzeit.

3SG.N stem-3SG still from POSS.1SG:DAT.SG.F military-time(F)

‘Goes back (all the way) to my army days.’ (Remarque, *Drei Kameraden*, cited in Shetter1966, glosses added)

Returning to the overarching development, after the initial analogical acquisition of new contexts, the ‘as far removed as’ reading would eventually be applied to other time specifications, such as in (238) and to cases where the associated constituent refers to people, as in (210) above. As Mustajoki1988 points out, in such cases an interpretation as ‘when it is/was still ...’ requires quite a stretch of the imagination and the corresponding periphrases are hardly adequate.

2 Temporal and aspectual uses

(found online, glosses added)

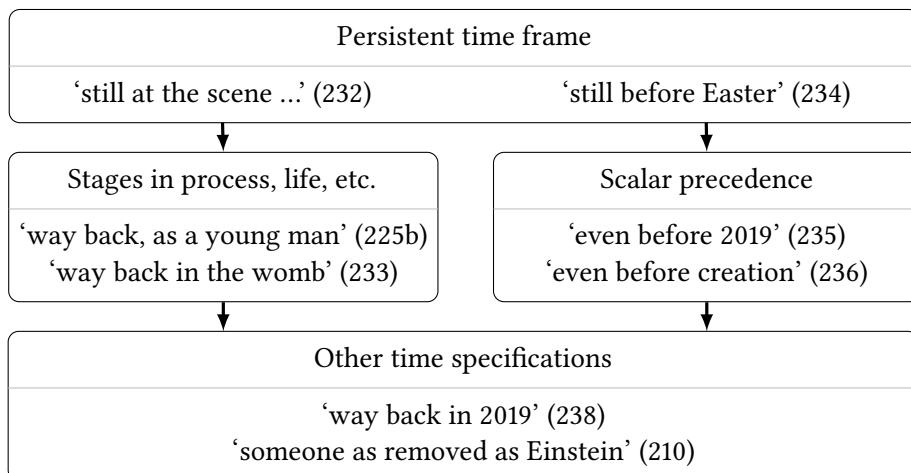

Figure 2.11: Hypothesized development of the ‘as far removed as’ use.

In a nutshell, the use of **STILL** expressions as scalar ‘as far removed as’ operators can be understood as a functional extension that does not directly build on phasal polarity. Instead, it is mediated by the persistent time frame use and involves a gradual and schematic context expansion, accompanied by the conventionalization of subjective inferences and the relaxation of appropriateness conditions. Testing the empirical validity of this scenario, schematically outlined in Figure 2.11, is an open task for future diachronic corpus studies.

2.5.3 Modifications of temporal clauses

In this subsection, I discuss a set of uses that involve the modification of a temporal clause. I understand *temporal clause* in a loose sense here, as covering subordination in the strictest sense, embedding through nominalization, as well as frame-setting medial clauses of a clause chain and constructions that *prima faciae* involve the mere juxtaposition of two independent clauses (“asyndetic hypotaxis” in the terms of Guelde1998’s Guelde1998). This set of uses encompasses **STILL** expressions as markers of simultaneous duration (Section 2.5.3.1) and as parts of constructions that signal coextensive duration ‘as long as’ (Section 2.5.3.2). Lastly, I briefly address the use of **STILL** expressions to signal precedence, which, strictly speaking, relates to NOT YET, rather than to **STILL** (Section 2.5.3.3).

2.5 Temporal connectives and modifiers

2.5.3.1 Simultaneous duration

Introduction Several sample expressions have a use as markers of simultaneous duration, understood here as a signal that the situation expressed in the matrix clause partially or fully overlaps with the one depicted in the temporal clause (cf. [Kortmann1997](#)). Example (239) is an illustration from Classical Nahuatl. Here, the STILL expression *oc* figures in a temporal clause introduced by the determiner *in* and specifies the temporal overlap between the two situations at hand. As in this instance, the Classical Nahuatl case often, but not always, features an additional level of embedding through *ic* ‘when’, i.e. lit. ‘when it is still the time that ...’.

(239) Classical Nahuatl

<i>Mācamo xi-còcoch-ti-ye-cān</i>	<i>in</i>	<i>oc</i>	<i>ic</i>
PROH	SBJV	doze-LNK	stay-PL DET still when
<i>n-on-tē-machtia.</i>			
SUBJ.1SG-IT-OBJ.INDEF:HUMAN-teach			

‘Don’t be dozing off **while I’m teaching**’
 (LauneyMackay2011, glosses added)

Note that I discuss the related, but semantically more specific, notion of coextensive duration separately in Section 2.5.3.2.

Distribution in the sample Table 2.16 lists the four sample expressions that can serve as markers of simultaneous duration use, be it in conjunction with other embedding strategies or in a *prima faciae* paratactic construction. As can be gathered, this function is found in four sample languages from North America. However, I rush to point out that this use is far from restricted to this continent. Outside of my sample, [Gueldemann1998](#) reports several relevant cases from the Bantu languages of Africa. In what follows, I first summarize [Gueldemann1998](#)’s observations, as they allow for insights into the North American cases as well. I then return to the sample expressions.

Interlude: Güldemann’s observations on Bantu In comparing the reflexes of Proto-Bantu **ki*- and **ka*- across the eastern branch of the family, [Gueldemann1998](#) observes a grammaticalization cline: the expressions in question start out as “persistives” in main clauses and then spread to dependent clauses. Here, they first keep their original meaning and then undergo a shift to markers of simultaneity, often-times ending up as the only overt indicator of the dependency relation.

2 Temporal and aspectual uses

Table 2.16: Simultaneous duration

Macro-area	Language	Expr.	Appx	Additional notes
North America	Classical Nahuatl	<i>oc</i>	E.1.1.5.1	Often as <i>oc ic</i> lit. '(is) still when'
	Creek	<i>(i)mônk*</i>	E.2.1.4.1	In medial clauses
	Maricopa	<i>-haay</i>	E.6.1.4.1	With inessive <i>-ly</i>
	Osage	<i>šó</i>	E.7.1.4.1	

* Borderline case of a STILL expression.

Subsequently, the expressions may lose its productivity in main clauses, thereby ceasing to be phasal polarity items altogether. This chain of developments is schematized in Figure 2.12, and two aspects are worth elaborating upon. For one, the use of the relevant expressions as markers of STILL (or a closely related notion) is diachronically prior. What is more, a semantic change occurs between the second and third stage, which leads to a functional mismatch between main and temporal clauses. This situation, which closely resembles the North American cases in my sample, is illustrated for Shona *ci-* in (240). In (240a) this prefix forms part of the main clause predicate and serves as a phasal polarity expression. In (240b), on the other hand, *ci-* occurs on the dependent predicate and signals simultaneous duration.

- (240) Shona
- a. *Ndi-ci-ri* *ku-tora.*
SUBJ.1SG-still-COP NCL15(INF)-take
'I am still taking.'
 - b. *A-ka-reva* *so-mu-nhu* *a-ci-rw-ira*
SUBJ.1SG-REM.PST-speak like-NCL1-person SUBJ.NCL1-still-fight-APPL
ru-penyu rw-ake.
NCL11-life NCL11-POSS.NCL1
'He spoke like a person fighting for his life.'
(Fortune1955, glosses added)

Gueldemann1998 traces this functional change back to the frequent use of the relevant expressions as part of the discursive background. This leads to semantic bleaching and their reinterpretation as markers of the dependency relationship itself, especially in those cases lacking any other overt signal of subordination, as in (240b). The assumed directionality is, of course, in line with the well-established tendency for meaning change towards the procedural (Section 1.6.2).

2.5 Temporal connectives and modifiers

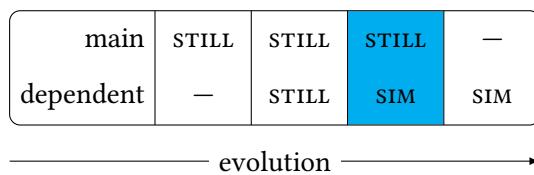

Figure 2.12: Schematic illustration of Gueldemann1998 (Gueldemann1998)'s observations on Bantu persistives

Conceivably, bridging contexts are found in cases like (241). Here, the persistent nature of the fleeting state is only of indirect relevance, in that it provides the bounds for what is primarily a relationship of simultaneous duration.

(241) Osage

Wak'ó ðáali šoo ðaiše wášcuye ðáali.
 woman good still 2SG.CONT 2SG:get_married(F) good
 'You ought to get married while you're (still) a pretty woman.'
 (QuinteroDictionary, glosses added)

In the same vein, where the sample data includes material from narrative discourse, there is a recurrent pattern '*p* ... when still *p, q*'.⁵⁸ Example (242) is an illustration. Arguably, in such cases the main contribution of the STILL expression lies in fostering textual cohesion, which could open the doors to a functional reanalysis.

(242) Rapanui

Context: two people have fled from the rain and are sitting in a cave.

I nonoho era, he papayaḥa'a i te ha'uru. E ha'uru nō
 PFV stay.PL DIST NEUTRAL heavy.PL at ART sleep IPFV sleep still
 'ā, he tu'u atu hoko rua haka'ou nu'u mai te

puhi iŋa mo te evinio.
 fish_at_night NMLZ for ART lent

'While they stayed there, they fell asleep. **While they were [still]** sleeping, two other people arrived, who had been fishing at night for Lent.' (Kieviet2017)

⁵⁸As observed before me, for instance, by Kieviet2017 for Rapanui *nō* and by Barclay2008 for Western Dani *awo*.

2 Temporal and aspectual uses

A closer look: the sample expressions I now return to a closer examination of the relevant sample expressions. To begin with, Maricopa *-haay* has the simultaneity function in collocation with inessive *-ly*. This is illustrated in (243a). It is noteworthy that the same construction yields an ordering of precedence when it is paired with clausemate negation; see (243b). This doubtlessly goes back to 'while still $\neg p$, q = while not yet p , q ' (Section 2.5.3.3). In other words, there is a clear trace of an original phasal polarity function, and **Gueldemann**1998 observes a similar case in the Bantu language Bemba.

- (243) Maricopa

 - a. *M-nak-k m-uucaa-haay-ly dany nym-k-ev-k.*
2-sit-ss 2-LOC.COP-still-in DEM DEM.ASSOC-IMP-WORK-
‘While you are sitting there, work on this.’
 - b. *Aly-m-yem-m-haay-ly ny-yuu-ksh.*
NEG-2-go-NEG-still-in 1>2-see-PFV.1
‘Before you left, I saw you.’ (Gordon1986)

Osage *šó* can serve as a simultaneity marker in a pattern that, on the surface, consists of the juxtaposition of two main clauses; see (244). Crucially, adverbial subordination in Osage is consistently marked at the right edge of the clause (Quintero 2004), except for these *šó* clauses. That is, Osage displays a striking similarity to the Shona case in (240) above, albeit with the structural parallels being found in syntax rather than on the word-internal level.

- (244) Osage
Á-wa-hkik-ie šó akxa-i wihtáeži Ɂkxa mázeié
 PVB:1SG.A-RECP-speak still 3.CONT-DECL sister SUBJ phone_call
hí-ð-ap-e.
 PREV:arrive_there-CAUS-PL-DECL
 'I was talking [to someone] when my younger sister called (lit. While I
 was having a conversation ...).' (Quintero2004)

Creek (*i*)*mônk* has been described as signalling simultaneous duration in certain parts of a clause chain (Martin2011; MartinMcKaneMauldin2000).⁵⁹ In the materials I consulted, all relevant attestations of affirmative polarity are compatible with a reading of a persistence. For instance, in (245) the background situation modified by (*i*)*mônk* already holds true before the occurrence of the

⁵⁹(i) *mōnk* is a borderline case of a STILL expression and might be considered a marker of stasis or permanence. This does, however, not affect the simultaneity function.

2.5 Temporal connectives and modifiers

foregrounded one. It is perhaps a question of degree how prominent one or the other reading is in Creek. Like the Maricopa case discussed above, clausemate negation yields a precedence reading.

- (245) Creek

Context: a boy has been turned into a snake. A man is watching him.

A:y-ít ma óywa ati:ⁿk-os-a:n il-hôyl-in ...

go.SG-ss that water up_to.EMPH-DIM-REF.DS go_and-stand.SG:RES-DS

LOC:water-disappear.SG:PFV-DS stand.SG-DUR STILL-DS

'He went to the water's edge and stood [and saw] ... and as he stood there watching [the snake] went under again.'

(HaasHill2014, glosses added)

Lastly, with Classical Nahuatl, illustrated in (239) above, the development has gone one step further and has given rise to the signalling of causal relations; see (246). As Launey1986 points out, this is clearly a case of the well-known extension from time to causality (e.g. KutevaEtAl2019).

- (246) Classical Nahuatl

In oc ic ti-tēpil-tzin ... xi-m-imat-cā-nemii

DET still when SUBJ.2SG-offspring-HON SBJV-REFL-be wise-LNK-live

‘Pues que eres bien nacido ... viue con cordura. [Since you are noble, live wisely]’ (Carochi1645, glosses added)

2.5.3.2 Coextensiveness

Introduction Two expressions in my sample, Modern Hebrew *sod* and Plateau Malagasy *mbola* (Appendices D.4.2.5.3, B.11.1.5.1), occur in collocations that signal simultaneous coextension, or that the matrix clause proposition holds true during the entire duration of the situation depicted in the background clause (cf. Kortmann 1997). With Modern Hebrew *sod*, this use is found in clauses introduced by the universal quantifier *kol*, as shown in (247). In Plateau Malagasy, the ‘as long as’ reading occurs in clauses governed by the temporal and conditional subordinator *raha* ‘if/when’; this see (248).

- (247) Modern Hebrew

Kol ſod (ti-hye) qayem-et ha-ſiṭa

all still 3SG.F-COP.FUT exist-3SG.F ART.DEF-system(F)

2 Temporal and aspectual uses

ha-zot, ze yi-mašex.
 ART.DEF-PROX.SG.F PROX.SG.M 3SG.M-continue.FUT

‘As long as this system exists, it’ll go on.’
 (Glinert1989, glosses added)

- (248) Plateau Malagasy

Ma-toki-a raha mbola velona aina.
 AGT.FOC-confident-IMP if/when still alive breath
 ‘Tant qu’il y a de la vie, il y a de l’espoir. [As long as there’s life, there’s hope]’ (MalagasyPhd, glosses added)

Note that these instances differ from ones like the German example (249), where the notion of coextension is due to a separate marker, *solange*, and the STILL expression *noch* does its usual job of relating two phases to each other.

- (249) German

Eröffne-t wurde der Tanz, solange meine Mutter noch leb-te ...
 open-PTCP become.PST.3SG ART.DEF:SG.M dance(M) as_long_as
 POSS.1SG:NOM.SG.F mother(F) still live-PST.3SG
 ‘The dance would be opened, for as long as my mother was still alive...’
 (MetrichFaucher2009, glosses added)

Discussion The semantics at play in the Hebrew and Malagasy cases is straightforward: at all times and, by metonymy, in all possible worlds, in which the subordinate proposition remains true, the same applies to the matrix clause one.

2.5.3.3 A note on precedence

Introduction In this subsection, I briefly discuss cases in which a STILL expression forms part of a common or default strategy to form temporal clauses of precedence (‘before *p, q*’). Example (250) is an example from Ruuli, featuring *kya-* in collocation with the copula *li* and an infinitival complement. Note that I do not discuss constructions of the type ‘(it is still) a certain amount of time, then *q*’ here; for a discussion of these, see Section 2.2.2.

- (250) Ruuli

Nga ebi-dima bi-kya-li kw-iza
 CONJ NCL8-hoe SUBJ.NCL8-still-COP NCL15(INF)-come

2.5 Temporal connectives and modifiers

tu-a-lum-isya-nga *busika* *bu-ni.*
 SUBJ.1PL-PST-dig-CAUS-HAB NCL14-small_hoe NCL14-PROX

‘Before the hoes arrived (lit. when hoes did not yet arrive), we dug with these small hoes.’ (MolochievaEtAl2021)

Distribution in the sample The twelve expressions in my sample which have the precedence use, in one collocation or another, are listed in Table 2.17. As can be observed, this function is attested in unrelated languages from all macro-areas minus Australia, and with expressions of different morphological or syntactic statuses.

Table 2.17: ‘Before’

Macro-Area	Language	Expression	Collocate
Africa	Manda	(<i>a</i>) <i>kóna</i>	INF
	Plateau Malagasy	<i>mbola</i>	NEG
	Ruuli	<i>kyā-</i>	COP (+INF)

	Huallaga-Huánuco Quechua	<i>-raq</i>	NEG
	Trió	<i>=nkérë</i>	NEG

* Borderline case of a STILL expression.

A closer look and discussion As can be gathered from the literal translation of the Ruuli example (250), the precedence reading here arises compositionally, through the adverbial subordinator *nga* ‘when, while’ plus the negative concept NOT YET. The latter concept is, in this case, signalled through the combination of *kyā-* with the copula and an infinitive; I discuss such uses of STILL as NOT YET without a negator in Section 2.3.1. In fact, all relevant instances in the sample can be traced back to the items in question forming part of a NOT YET expression of varying shapes and forms,⁶⁰ together with a semantically unspecific clause

⁶⁰A possible counterexample from outside the sample is found in Turkana (Niloitic) *ròkò*, see Dimmendaal1983. Judging from the other examples of this expression throughout

2 Temporal and aspectual uses

combining device.⁶¹ Where the majority of them differ from the Ruuli one is that they are built around clausemate negation. Examples (251, 252) illustrate this more transparent pattern for a nominalized temporal clause in Northern Qiang and a medial clause in Creek.

(251) Northern Qiang

*Nəs qa **ma-tci-tç**, the: qa **sɔimi de-l**.*
yesterday 1SG NEG-still-go-GEN 3SG 1SG fruit DIR-give.

‘Yesterday before I left, s/he gave me (a package of) fruit.’

(LaPollaHuang2003)

(252) Creek

Lítk-iko-: mònk-in is-ás.
run.SG-NEG-DUR still-DS catch-IMP

‘Catch it before it runs (lit. while it has not [yet] run, catch it).’

(Martin2011)

The use of NOT YET constructions as signals of precedence is a strategy attested beyond the confines of my sample (OlguinMartinez2022; VeselinovaDevos2021) and the underlying temporal relations are straightforward. When topic time is narrowed down to a time at which the subordinate situation does not yet hold true, it is restricted to a time before the possible manifestation of said situation; the same observation has been made before me by Gordon1986 and Weber1989, among others. In a nutshell, what appear to be a STILL-as-‘before’ use at first glance turns out to be an artefact of the expressions in question also being involved in marking the negative concept NOT YET.

Dimmendaal1983’s grammar, I would expect *ròkò* to go together with a copula it were to serve as a marker of STILL in the relevant cases. That is, the instances in question appear to be based on a pattern in which a STILL expression serves as a marker of NOT YET in the absence of an overt complement; see Section 2.3.1 on the latter.

⁶¹That is, we are not dealing with “expletive negation” (JinKoenig2021), as in German *Bevor du nicht aufgeräumt hast, darfst du nicht spielen* ‘You aren’t allowed to play before tidying up (lit. ... before you haven’t tidied up).’

3 Non-temporal uses

*Noch der armseligste Mensch ist
fähig, die Schwächen des
bedeutendsten, *noch* der dümmste,
die Denkfehler des klügsten zu
erkennen.¹*

(Theodor Adorno)

3.1 Introduction

In this chapter, I discuss uses that are primarily non-temporal. More specifically, in Section 3.2 I address **STILL** expressions in marginality function (e.g. ‘a penguin still counts as a bird’). This is followed by an overview of uses pertaining to, or closely related to, the realm of additive focus quantification in Section 3.3. In Section 3.4 I survey uses of **STILL** expressions as restrictive focus quantifiers. Lastly, in Section 3.5 I discuss uses that are modal (in the widest sense of the term) and/or interactional.

3.2 Marginality

Introduction In this section, I discuss a use that has come to be known under the label of “marginality” (Ippolito2007; Koenig1977; Michaelis1993, among others). In this function, a **STILL** expression combines with a scalar predicate or an expression for a graded category and, as the label *marginality* suggests, it signals a rank that lies in proximity to a threshold. The examples in (1, 2) are illustrations. In (1) Juan is portrayed as borderline bearable. People ranking even lower in the speaker’s esteem, such as Pedro, fall outside the relevant region on a scale of sympathy. In (2) *noch* highlights that Aachen lies within German territory, albeit in proximity to the border. Not much further West, one crosses into Belgium. Such comparisons between applicable and non-applicable arguments (i.e. contrastive

¹‘Even the basest of humans is *still* capable of detecting the weaknesses of those most eminent, even the most stupid person can *still* recognize the fallacies committed by the smartest.’

3 Non-temporal uses

topics) are a recurrent theme with the marginality use.²

(1) Spanish

A Juan todavía lo aguant-o, pero a Pedro no.
ACC J. still 3SG.ACC.M tolerate-1SG but ACC P. NEG

‘I still stand Juan, but not Pedro.’ (EderlyCurco2016, glosses added)

(2) German

Aachen lieg-t noch in Deutschland, Lüttich ist schon Belgien.
A. lie-3SG still in Germany, Liège COP.3SG already Belgium

‘Aachen is still in Germany, Liège is in Belgium already.’

(personal knowledge)

Note that marginality is not conventionally associated with focus (Groß2012; Koenig1991), which distinguishes it from the additive and restrictive operator uses that I discuss in Sections 3.3.1 and 3.4, but aligns it with phasal polarity.

Distribution in the sample Table 3.1 lists the expressions for which the marginality use is found in the sample data. As can be gathered, it is attested for 21 expressions from 19 distinct languages, and for all macro-areas except Australia.³ They are, however, relatively rare in Papuasia compared to the number of sample languages. I cannot disregard the possibility that this scarcity of attestations is simply a function of the available data. At the same time, many STILL expressions in Australia and Papuasia also serve as non-scalar exclusive operators ‘just, only’ (Section 3.4.2). It is conceivable that this restrictive function blocks the development of marginality readings.

² MosegaardHansen2008, in dealing with data from French, makes a distinction between two types of marginality uses. In the first type, which she terms “scalar”, two scales are aligned with each other. This is found in (1), where the a ranking of subjects is aligned with different degrees of sympathy. In the second type, which she terms “categorizing”, a binary question of inclusion vs. exclusion in a given category is at stake, typically in a copula clause. This second type is instantiated in (2). As MosegaardHansen2008 points out herself “[o]ne may legitimately wonder whether there is any reason to distinguish the scalar and the categorizing use at the semantic level”. Against this background, and given my often limited third-party data, I do not follow this distinction in my discussion.

³ The marginality use is also attested for several cognates of expressions in my sample, e.g. Dutch *nog* (Rombouts1979; Vandeweghe1984), Catalan *encara* (PerezSaldanyaSalvador1995), or the various cognates of Serbian-Croatian-Bosnian *još* across Slavic (Bogacki1993; SSSJ; PWN; SSJC; KSS4; Komarek1979; Mustajoki1988; CYM11). In addition, it is found with Hungarian *még* (CsirmazSlade2020).

ⁱ Only one example in the data.ⁱⁱ With reservations; see discussion below.ⁱⁱⁱ Borderline case of a STILL expression.

A closer look: similarities and differences to phasal polarity In now turn to a closer look at the marginality use. In what follows, I first focus on the similarities to, and differences from, its phasal polarity cousin. Afterwards I discuss some more specific usage patterns and functions derived from marginality. To begin with, there is an obvious conceptual relationship between marginality and phasal polarity. Thus, just as through STILL a situation is depicted as extending through to topic time and towards its possible end, the marginality construal involves the continuation of a scale (or a specific region thereon) through to the value or entity under discussion and towards its end (MosegaardHansen2002, MosegaardHansen2008; Koenig1977, Koenig1991; Liu2000; Loebner1989; Michaelis1993; Yeh1998; among others). Correspondingly, marginality “*still* establishes a perspective where the P scale has been under discussion”, whereas its counterpart “*already* P establishes a perspective where the \neg P to P transition is salient” (Ippolito2007). For instance, an example like (2) above is felicitous in a context where locations

3 Non-temporal uses

within Germany have been established as the topic of discussion. Figure 3.1 is a graphic illustration.

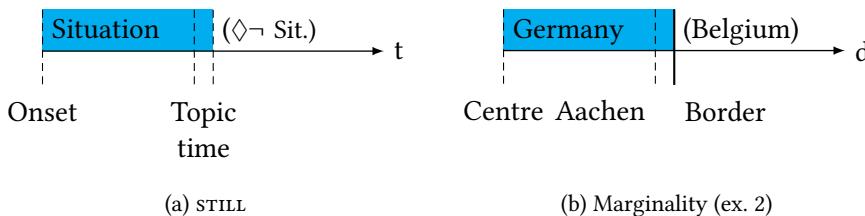

Figure 3.1: Illustration of the marginality use

Despite this striking similarity, there are distinctive differences between the two uses. The first and obvious one pertains to the temporal vs. non-temporal nature of the scales in question. The second, and more subtle, point of divergence is the reality status of the threshold, which is indicated by the dashed vs. solid rightmost vertical line in Figure 3.1b. Whereas the appropriateness conditions of **STILL** only require that a discontinuation scenario be entertainable, marginality

can be said to conventionalize ... the presupposition of expected transition: the speaker's assertion that an entity bears some scalar property is informative only in so far as the entity's location ... is subject to debate. The equivocal nature of the entity's membership ... arises from it being situated at or near a transition point (Michaelis1993)

Consequently, the marginality use is not available with clear-cut cases, such as central members of a category (Deloor2012; MosegaardHansen2008; Muller1991; Rombouts1979; among others). Thus, (3) is markedly odd, given that Göttingen lies slap bang in the centre of Germany.

(3) German

? *Göttingen lieg-t noch in Deutschland.*

G. lie-3SG still in Germany

'Göttingen is still in Germany.' (personal knowledge)

The third difference between marginality and phasal polarity **STILL** lies in the orientation of the scale. Recall that **STILL** presupposes an earlier runtime of the same situation and addresses the question of whether it has ceased at topic time (the time under discussion). Both the earlier temporal relatum and topic time can be understood as positive calendric values. Scales such as the geographic regions, however, end at their most decentral members (those furthest removed,

3.2 Marginality

most unrepresentative, etc.). In other words, the city of Aachen in (2) is an applicable argument for the predicate ‘be in Germany’, but a location-wise highly atypical one. Correspondingly, **Umbach2009** posits an ordering of “inverse prototypicality” and **MosegaardHansen2008** speaks of the addressee being “instructed to scan the relevant scale of values counter-directionally.” This is illustrated in ??.

Figure 3.2: Graphic illustration of (2)

These differences in meaning, in turn, can have grammatical correlates. For instance, though the marginality use, just like its phasal polarity ancestor, naturally combines with an imperfective viewpoint, it is occasionally attested with a perfective one; see (4). In line with the above observations on (1–3), what is at issue in such instances is not the event depicted in the main predicate, but a degree variable and the question of its location inside or outside the bounds of some salient scale.

(4) Serbian-Croatian-Bosnian

Ti si još jeftino proša-o.
2SG COP.2SG still cheaply pass.PFV.PTCP-SG.M

‘You still got off cheaply.’ (**Prajnko**vic2018, glosses added)

When it comes to syntactic placement, English *still* in clause-final position can only have a phasal polarity interpretation, not the marginality one (**Michaelis**1993). Similarly, German *noch* in the forefield position of a V2 clause is always a phasal polarity item, and cannot have a marginality reading, as shown in (5a). The same holds true for isolated *noch*; see (5b). In the same vein, French *encore* does not have a marginality reading when used in elliptical utterance (**MosegaardHansen**2008).

3 Non-temporal uses

(5) German

- a. **Noch** ist Paul *gemäßigt*.
still COP.3SG P. moderate
'So far Paul is still moderate.'
not: 'Paul is still within the range of people counting as moderate.'
(Koenig1991, glosses added)
- b. Paul ist *gemäßigt*. – **Noch**.
P. COP.3SG moderate Still
'Paul is moderate. – For now [he still] is.'
not: 'Paul is moderate. – Barely so.' (personal knowledge)

A closer look: some more usage patterns Having established the key similarities and differences between phasal polarity **STILL** and its marginality counterpart, I now turn to some more specific usage patterns. In the case of German *noch*, the borderline status of the topical argument is often made explicit by additional expressions like *eben* 'just, precisely' or (so) *gerade* '(just) barely', as in (6).

(6) German

- Osnabrück liegt (*gerade*) **noch** in Niedersachsen.
O. lie.3SG just still in Lower_Saxony
'Osnabrück is still Lower Saxony (i.e. it is a marginal case of being in the Lower Saxony territory)' (Umbach2012, glosses added)

For French *encore* it has been observed that its marginality use is exclusively (or nearly so) found with predicates that involve a positive evaluation (MosegaardHansen2008). For instance, in (7) *encore une somme* 'still a decent sum' indicates that the inheritance is not fortune expected by speaker A, but falls within that portion of the scale that they should be happy about. A similar finding has been reported for Mandarin Chinese *hái* (Yeh1998; Lu2019; and references therein).

(7) French

- A: *Je suis bien embêté. Ma tante a légué la plus grande partie de sa fortune à un refuge animalier, et je n'aurai que 10.000 euros...*
'I'm really annoyed. My aunt has left the better part of her fortune to an animal shelter, and only 10,000 euros to me...'
- B: *Ben, 10.000 euros, c'est encore une somme.*
well, 10,000 euros PROX.SG.M-COP.3SG still ART.INDEF:SG.F sum(F)
'Well, 10,000 euros is still a decent sum.'
(MosegaardHansen2008, glosses added)

3.2 Marginality

Given that better exemplars need to be conceivable, the marginality use of **STILL** expressions lends itself to downgrading and can even yield downright derogatory overtones. These are particularly salient in the context of direct comparisons, even when the property in question is, in itself, desirable (Mosegaard Hansen 2002; Koenig 1977). This is illustrated in (8, 9) for German *noch* and Mandarin Chinese *hái*. In (8), Paul is depicted as a marginal case of an intelligent person. The invocation of a specific standard through *von der Familie* ‘of the family’ suggests that under normal circumstances he would fall below the threshold value. The conclusion is that he is outright dumb. His family, which, as a function of the superlative, ranks below him, fares even worse. A similar conclusion is brought about in (9), where the dish under discussion is explicitly described as unappealing in the immediate discourse context.

(8) German

*Paul ist noch der intelligent-est-e von
P. COP.3SG still ART.DEF:NOM.SG.M intelligent-SUP-NOM.SG.M from
der Familie.*
ART.DEF:GEN.SG.F family(F)

‘(They are all pretty stupid. But) Paul is still the most intelligent of the family.’ (Koenig 1977, glosses added)

(9) Mandarin Chinese

*Zhèdào dòufu bù zěnme hǎochī, zhè hái shì zhè jiā diàn
PROX-CLF tofu NEG that tasty PROX still COP PROX-CLF store most
zui hǎo de cài le.*
good ASSOC dish SFP.

‘This tofu dish is not that tasty, and this is already the best dish of the restaurant.’ (Liu 2000)

In the sample data, examples comparable to (8, 9) are attested for French *encore* and Serbian-Croatian-Bosnian *još*. Attestations involving comparisons, but not necessarily with derogatory overtones, are found for Kalamang *tok* and Trió = *nkéře*. Cases like (9) probably also motivates the optional use of Mandarin Chinese *hái* in make-do contexts like (10a) and in a disjunctive clause pattern *yǔqì ... (hái) bù rú* ‘rather than ... would (still) be better’ that is illustrated in (10b). Both types involve an implicit or explicit comparison and the proposition in the scope of *hái* is evaluated as somewhat better than the comparee, at least in the context of the specific local standard.⁴

(10) Mandarin Chinese

⁴A similar suggestion, albeit only for make-do contexts, has been made by Paris 1988.

3 Non-temporal uses

- a. *Bié shuō le, hái-shì kuài zǒu ba.*
 PROH talk PFV still-COP quickly leave SFP
 'Don't talk anymore; we had better leave quickly. [i.e. leaving quickly does not solve things, but it's the best we can do right now]' (Liu2000)
- b. *Yùqí zài jiē shàng xiánguàng, hái bù rú qù dǎ lánqiú.*
 rather_than COP.LOC street at wander still NEG as_if go play basketball
 'It is [still] better to play basketball than to wander aimlessly on the street.' (HuangShi2016)

Evaluation and indirect comparison are also at play in the use of Spanish *todavía* as a pro-predicate signalling that a state-of-affairs is barely within social norms (Appendix D.13.2.7.1). This is illustrated in (11a). Like this attestation, all examples in the literature feature hypothetical states-of-affairs and serve as a comment on a factual, but unacceptable situation. As pointed out before me by Bosque2016 and Deloor2012, this function of *todavía* doubtlessly goes back to a marginality use plus ellipsis of an evaluative predicate. That is, example (11a) is modelled after cases like (11b).

(11) Spanish

- a. *En el coche, en la mesa, en la cama, todavía... pero tienes 5 minuto-s para sac-ar ese televisor d-el baño.*
 in ART.DEF:SG.M car(M) in ART.DEF:SG.F table(F) in ART.DEF:SG.F bed(F) still but have.2SG 5 minute-PL for remove-INF DEM.SG.M television(M) of-ART.DEF:SG.M bathroom(M)
 'In the car, on the table, in bed, [that would] still [be acceptable]... but you have five minutes to move that TV out of the bathroom.' (Deloor2012, glosses added)
- b. *Todavía que eso occur-ies-e en público pod-ría pas-ar, ¡pero en privado!*
 still SUBORD DEM.SG.N happen-PST.SBJV-3SG in public can-COND.3SG happen-INF but in private
 'Such a thing occurring in public, that could happen, but in private!?' (Goméz de la Serna, *Automoribundia*, cited in Bosque2016, glosses added)

3.2 Marginality

A broadly comparable pattern is found in Serbian-Croatian-Bosnian and involves the reduplicated form *jošjoš* (Appendix D.11.1.6.1). Typically, the anaphoric neuter demonstrative *to* stands in as the subject, as in (12). This usage signals that a state-of-affair is somewhat acceptable in a given circumstance, but not in another one. Not all native-speaker linguists consulted by me knew of this specific function, so it might be a regionalism. Interestingly, however, outside of my sample it finds a parallel in the Slovak cognate *eštešte*, as shown in (13).

- (12) Serbian-Bosnian-Croatian

Platiti tolike novce, to još~još (ali
 pay.PFV.1NF so_much.GEN.SG.F money(F).ACC.SG DEM.N.SG still~still but
za lošu stvar nikada).
 for bad.ACC.SG.F thing(F).ACC.SG never

‘To spend so much money, well ok (but [I’d] never [spend it] on [such] a bad thing).’ (HJP, glosses added)

- (13) Slovak

V lete bolo ešte~ešte, ale v zime!
 at summer.LOC COP.PTCP.N.SG still~still but at winter.LOC
 ‘In summer it was so-so, but in winter!’ (SSSJ, glosses added)

The marginality use of French *encore* and Spanish *todavía* has led them to serve as *at least*-type restrictive operators in counterfactual conditionals. Example (14) is an illustration; for more discussion see Section 3.4.4.

- (14) Spanish

¿Para qué ahorr-as?; todavía si tuvier-as hijo-s

esta-ría justificado.
 COP-COND-3SG justified

‘What are you saving money for? If you at least had kids, then it would make sense.’ (RAEDictionary, glosses added)

Lastly, in **PersohnSchonNoch** I argue that marginality also feeds into German *noch* as a peculiar type of scalar additive ‘even’ in cases like (15); also see Section 3.3.4.

- (15) German

Context: there are no more innocent things.

3 Non-temporal uses

in dem Augenblick, in welchem man sein Blühen ohne den Schatten des Entsetzens wahrnimmt.

‘the moment its bloom is perceived without the shadow of terror.’
(Adorno, *Minima Moralia*, glosses added)

Discussion As I pointed out above, there is a noteworthy conceptual similarity between phasal polarity STILL on the one hand and its marginality counterpart on the other. In fact, the latter can be understood as metonymically derived from the former (MosegaardHansen2008; Krifka2000; Loebner1989; among others), at least in diachronic terms. This direction of change is, of course, in line with the well-known tendency of the subjectivization of meaning (Section 1.6.2) and a projection from times to other scales corresponds to Himmelmann2004’s (Himmelmann2004) “semanto-pragmatic context expansion” that is characteristic of grammaticalization/pragmaticization processes. As far as actual usage is concerned, bridging contexts can be readily found in examples like (16, 17).

(16) Old French, 13th/14th century

Context: after having been caught in a brothel, a knight had to give up his horse and armor and leave camp. The king has been asked if the horse could be given to a poor nobleman.

*Et le roy me respondi que ceste
and ART.DEF:SG.M king(M) 1SG.OBJ answer.PST.PFV.3SG SUBORD PROX.SG.F
priere n'-estoit pas resonnable, que le

cheval valoit **encore IIIxx livre-s.**
horse(M) be_worth.PST.IPFV.3SG still eighth pound-PL*

‘And the King answered that this request was unreasonable, for the horse was worth 80 pounds, after all / was still worth 80 pounds.’ (de Joinville, *La vie de Saint Louis*, cited in MosegaardHansen2008, glosses added)

(17) Kalamang

Context: a boat trip around an island.

*Mindi warkin laur warkin kararak=tauna o get me tiri
like_that tide rising tide dry=so EMPH if not sail
osew=ar=a pareir=et. Wa me **tok bisa.**
beach=OBJ=FOC follow=IRR PROX TOP still can*

‘Like that the tide is low, if not we’d sail following the beaches. This is still OK (lit: this, [we] still can).’ (Visser2021b)

3.2 Marginality

For (16), **MosegaardHansen2008** points out that a phasal polarity reading is possible, but less salient, because nowhere in the preceding texts has the persistent or remaining value of the horse, let alone that of any other item, been discussed. In the Kalamang example (17), a marginality reading and the phasal polarity one are intertwined, in that the sea levels are a function of the tide, whence of time. A similar case is found in the one relevant example I have from Plateau Malagasy, given in (18). The context and **Dez1980**'s (**Dez1980**) parenthetical remarks suggest that a reading of marginality is at least latent, though this is also a function of decay over time.

(18) Plateau Malagasy

Context: about a house with a ruined roof.

Mbola trano io.

still house DEM.SG

‘Ceci sert encore de maison (parce que, par exemple, le toit, quoique endommagé, peut encore servir d’abri). [This still serves as a house (because, for example, the roof, although damaged, can still serve as a shelter)]’ (**Dez1980**, glosses added)

As observed before me by **Rombouts1979** and **VictorriFuchs1996**, an overlap between the two functions is also found in some instances where, to quote **Loebner1989**, “the time scale and the reference point thereon are replaced by a scale of objects which are located in time and hence (indirectly) temporally ordered”. For instance, what is at stake in (19) Goethe’s style during the production of various successive works. At the same time, the character of the first entity under discussion, *Jägers Abendlied*, is depicted as a borderline case that can be categorized as part of the earlier period, but whose tone leans towards the later one.

(19) German

Context: about different poems by Goethe.

Wenn “Jägers Abendlied” noch zwischen Trotz und Ergebung
when/if J. A. still between defiance and submission

‘While *Jägers Abendlied* still fluctuates between defiance and submission, in this poem the new mild tone has been settled upon.’
(Staiger, *Goethe*, cited in **Shetter1966**, glosses added)

3 Non-temporal uses

On a more abstract level, when membership in a graded category is at stake, the “mental category scan” that the hearer is instructed to perform “can be assumed to occupy a certain (if small) amount of time” (MosegaardHansen2008). Taking (2), repeated below, as an example, by the time someone scanning their mental map of Germany from centre to periphery has localized Aachen, their virtual self may be felt to have spent an advanced amount of time in the process. In the same vein, the hard-wired threshold that goes along with marginality, and which I discussed above, can be understood as the conventionalization of an erstwhile implicature (Michaelis1993).

(2) German

Aachen lieg-t noch in Deutschland, Lüttich ist schon Belgien.

A. lie-3SG still in Germany, Liège COP.3SG already Belgium

‘Aachen is still in Germany, Liège is in Belgium already.’

(personal knowledge)

Further support for the assumed direction of change comes from diachronic data. First of all, for about half of the expressions in Table 3.1 a primacy of phasal polarity can be deduced from the known etymologies. What is more, diachronic studies of French *encore* and Mandarin Chinese *hái* have shown that unequivocal instances of the marginality use only show up centuries after phasal polarity functions of the same items (MosegaardHansen2008; Yeh1998). Lastly, for three expressions in my sample the data indicate that the marginality use is unavailable. These are Japhug *pxjkʰu*, Tima *bʌʌr*, and Tunisian Arabic *māzāl* (Appendices D.6.1.3, B.17.1.5, B.18.1.6). The examples in (20) illustrate this for Japhug *pxjkhu*.

(20) Japhug

3.3 Additive and related functions

not: ‘... Lixian is still [i.e. classifies as a marginal member] of a Tibetan area.’ (Guillaume Jacques, p.c.)

In addition, Modern Hebrew *sod* appears to allow for the marginality use, but fares less well in these contexts than its near-synonym *sadayin*. This is likely due to *sod* being strongly associated with event-based additivity. French *toujours* does not have a marginality use either, but gives a reading of ‘always, invariably’ in these contexts; see (21). Admittedly, *toujours* is a borderline case of a **STILL** expression in the first place and is probably best considered a marker of stasis (Appendix D.2.2.2).

(21) French

- A: *On a fait une collecte parmi les parents afin de pouvoir rénover l'aire de jeux de l'école, et on n'a eu que 1.000 euros.*

 ‘Hm! Well, it’s always money.’ (MosegaardHansen2008, glosses added)

3.3 Additive and related functions

3.3.1 Introduction

In this section, I turn to the use of **STILL** expressions as additive markers, as well as to several functions which **Forker2016** observes to be common extensions of such operators. In Section 3.3.1 I discuss additive uses in the stricter sense ‘also, in addition, another’. Subsequently, in Section 3.3.3 I discuss the “further-to” (Klein2018) use, which combines additivity and phasal notions. In Section 3.3.4 I turn to scalar additive ‘even’. In Section 3.3.5 I then examine to uses as degree modifiers in comparisons of inequality, before turning to uses as coordinators ‘and, or’ in Section 3.3.6. In Section 3.3.7.1 I discuss **STILL** expressions as conjunctival adverbs. This is followed by a brief reflection on some of **Forker2016**’s (**Forker2016**) observations on other additive operators as compared to **STILL**-as-additive expressions in Section 3.3.8. Lastly, in Section 3.3.9 I discuss a few language specific remnant uses that have some loose conceptual similarity to additivity.

3 Non-temporal uses

3.3.2 (Plain) additive

Introduction As laid out in Section 1.6.4, I understand additive focus quantification in the stricter sense of the term as a signal that the communicative common ground contains at least one alternative to the focus denotation that may yield a true proposition. Against this backdrop, the Tundra Nenets examples in (22) are illustrations. In (22a) the STILL expression *təmna* marks the transfer of a reindeer as an addition to the brother's the act of giving help. In (22b) *təmna* sets the denotation of the object noun phrase *ngob yah xoram* 'a mammoth' in relation to an additional entity of the same kind.

Nikolaeva2014)

Distribution in the sample Table 3.2 lists the expressions in my sample that have an additive function. As can be gathered, such uses are attested for 29 expressions from 28 distinct languages, which makes them the single-most common functional extensions in my sample. To these instances one could add Gurindji =*rni*, which forms part of the complex clitic =*rningan* with additive functions (Appendix C.2.1.5.1). In geographic terms, all six macro-areas are covered, though there is a noticeable distributional bias towards Eurasia and, to a lesser degree, Africa. In terms of the wordhood parameter, the additive use is found with expressions of all types.⁵

⁵Outside of my sample, an additive use is found with several cognates of sample expressions, such as Dutch *nog* (Vandeweghe1984), Italian *ancora* (e.g. Tovena1994; Veginaduzzo2000), or cognates of Serbian-Croatian-Bosnian *još* across Slavic (e.g. Bogacki1989; SSSJ; SSJC; KSS4; Mustajoki1988). It is also found, for example, with Albanian *akoma* and Modern Greek *akome* (Buchholz1991), Danish *endnu* (DDO) and Hungarian *még* (e.g. CsirmazSlade2020; ZhangLing2016).

3 Non-temporal uses

In what follows, I first take a glance at a few examples that are ambiguous between a phasal polarity sense and an additive interpretation. I then turn to some characteristic usage patterns, focussing primarily on a comparison to other additive markers. I then briefly touch on usages involving a **STILL** expression in additive function together with other additive markers. Afterwards, I turn to some similarities between additivity and event repetitions, to finally address the question of functional motivation and possible diachronic pathways.

Additivity and phasal polarity Whereas in cases like the initial examples (22a, 22b) an additive use can be clearly differentiated from a phasal polarity one,⁶ this distinction is not always that clear-cut. As has been repeatedly observed in the literature, it is not uncommon to encounter attestations that can be read both ways.⁷ For instance, example (23) can be understood as either depicting the need for a missing piece, or as involving an addition to the growing list of parts being used.

(23) German

Context: the speaker is assembling a wooden toy plane.

Also und ach so, und dann brauch-e ich noch eine

well and INTERJ and then need-1SG 1SG still ART.INDEF:ACC.SG.F

Siebener-leiste.

seven_piece-bracket(F)

‘Well and oh yes, and then I also need/still need a 7-hole piece.’

(Nederstigt2003, glosses added)

This “glass half empty/glass half full” situation is particularly pronounced when the persistent duration of a situation itself is at stake. Thus, the question in (24) is either about the amount of time left to a state-of-affairs, or an inquiry about its supplementary duration. Both, of course, ultimately amount to the same thing.

(24) German

Wie lange wird denn das noch dauer-n?

how long FUT.AUX:3SG DM 3SG.N still last-INF

‘For how long is this still going to take? / How much longer will this take?’ (Schnitzler, *Leutnant Gustl*, cited in Shetter1966, glosses added)

⁶Note, for instance, that both examples feature an perfective viewpoint plus achievement predicate, which would be incompatible with the concept of **STILL** (Section 1.4.1), as well as the additional clue through *t'ax^omna* ‘besides’ in (22a).

⁷See Borillo1984, Bosque2016, Doherty1973, MosegaardHansen2008, Nederstigt2003, RAEGramatica, Shetter1966, VictorriFuchs1992, among others.

3.3 Additive and related functions

I examine some more examples of this type below. Before that, it is worthwhile addressing a few of the semanto-pragmatic characteristics **STILL** expressions in additive function.

A closer look: **STILL expressions as additives and incremental discourse** It has repeatedly been observed that the additive use of expresions such as French *encore*, German *noch*, Mandarin Chinese *hái* or, outside of my sample, Dutch *nog* and Hungarian *még*, is strongly associated with an incremental progress in discourse and a cumulative notion of “adding up to a larger whole” (Koenig1991).⁸ This characteristic is commonly understood as the textual counterpart to how phasal polarity **STILL** portraits a situation as progressing from an earlier time through to topic time and towards its conceivable end. It manifests itself in a preference for contexts of stepwise elaborations on an established topic, sequential events, and the like. For instance, German *noch* is the default marker in questions that request further elaboration on a topic, as in (25). The other common additive marker, *auch* ‘also’, on the other hand, is odd here, and would only be acceptable in a type of rhetorical question (Umbach2012).

(25) German

- A: *Gestern auf der Party habe ich Otto getroffen.*
‘Yesterday at the party I met Otto.’
- B: *Wer war noch (?auch) da?*
who COP.3SG.PST still also there
‘Who else was there?’ (Umbach2012, glosses added)

Conversely, *noch* is infelicitous in (26), which draws up a parallelism between two subjects and thereby a switch in discourse topic.

(26) German

- Context: speaker A dominates the conversation with reports about himself.
- A: *...und letztes Jahr war ich in Paris.*
‘...and last year, I was in Paris.’
 - B: *Mein-e Tante Agathe war auch (#noch) in Paris!*
POSS.1SG-NOM.SG.F aunt(F) A. COP.PST.3SG also still in P.
‘My aunt Agathe was also in Paris!’ (Eckardt2006, glosses added)

⁸Also see Borillo1984, Eckardt2006, Grubic2018, MosegaardHansen2008, Nederstigt2003, Noelke1983, Umbach2012, Vandeweghe1984; ZhangLing2016, among others.

3 Non-temporal uses

In a related fashion, the additive use of Mandarin Chinese *hái* has been described as requiring events to fall into a single time span (JingSchmidtGries2009). Thus, example (27) is infelicitous, unless the discourse topic provides for a single, overarching setting (e.g. ‘in recent years he has been busy travelling’).

(27) Mandarin Chinese

- # *Tā qùnián qù le Yīngguó, jīnnián hái qù le Fàguó.*
 3SG last_year go PFV England this_year still go PFV France
 (intended: ‘He went to England last year, and this year he went to France.’) (JingSchmidtGries2009)

Were the additive use is associated with such incremental discourse management, its focus is often the last item in a list, as in (28). In French this has become conventionalized in the form of the disjunctive connective *ou encore* ‘or still’ which marks the last-mentioned element in a series of non-exclusive alternatives; see (29).

(28) German

- Sie reich-te dem Händler glänz-end-e
 3SG.F pass-PST.3SG ART.DEF:DAT.SG.M merchant(M) shine-PTCP-ACC.PL
 schwarz-e Vanille-stang-en, Zimt-rind-en, eine
 black-ACC.PL vanilla-stick-PL cinnamon-bark-PL ART.INDEF:ACC.SG.F
 Handvoll Muskatnüsse, Lakritzen-gebild-e ... und was
 handful(F) nutmeg.ACC.PL liquorice-formation-ACC.PL and what
 weiß ich noch.*
 know.1SG 1SG still

‘She handed the merchant shiny black vanilla sticks, cinnamon barks, a handful of nutmegs, liquorice **and what-have-you else**.’

(MetrichFaucher2009, glosses added)

(29) French

- Appelle, Pierre, Jean ou encore Paul.
 call.IMP P. J. or still P.
 ‘Call Pierre, Jean, **or (even) Paul**.’ (Borillo1984, glosses added)*

Containing alternatives to be considered at the same time, example (29) illustrates another important point: an expression’s preference for an incrementally progressing discourse is not to be equated with the marking of temporal advancement. To give another example, the use of *noch* in (30) does not commit the speaker to any order in which Otto consumed his drinks. Instead, the

3.3 Additive and related functions

anaphoric relatum of *dann* ‘then’ can equally well be the order of mentioning (Umbach2012; also see MosegaardHansen2008 for a very similar case).

(30) German

<i>Otto hat</i>	<i>ein</i>	<i>Bier</i>	<i>getrunken. Dann hat</i>
O.	have.3SG ART.INDEF:ACC.SG.N	beer(N)	drink.PTCP then have.3SG
<i>er noch einen</i>		<i>Schnaps</i>	<i>getrunken.</i>
3SG.M	still	ART.INDEF:ACC.SG.M	schnaps drink.PTCP

‘Otto had a beer. Then he had a schnaps in addition.’

(Umbach2012, glosses added)

In narrative discourse, where the order of discourse time and that of events is normally aligned, the counterpart to a final list item consists in a recurring pattern by which “an ‘in-between act’ or ‘in-between happening’ is slid in before the concluding event” (Vandeweghe1984).⁹ This is illustrated in (31), where Spanish *todavía* goes together with the last event in the former athlete’s series of personal and professional victories. This brings an example like (31) markedly close to the “further-to” use I discuss in Section 3.3.3. The key difference is that the latter use requires much less of a textual embedding (it allows for easy accommodation).

(31) Spanish

Context: about a former professional athlete. He got married to a member of the royal family, and the wedding is described a “success”.

<i>Todavía le</i>	<i>dio</i>	<i>tiempo a ganar una</i>
still	3SG.ACC.M	give.PST.PFV.3SG time to win-INF ART.INDEF:SG.F
<i>medalla de bronce en Sidney 2000...</i>		

medal(F) if bronce en S. 2000

‘He still found time to win a bronze medal at the Sidney 2000 olympics.’

Esa medalla precipitó su retirada a los 32 años.

‘This medal precipitated his retirement at 32 years of age.’

(CORPES XXI, glosses added)

A closer look: some correlates of incremental discourse The incremental or cumulative notions found on the level of discourse organization can give rise to various expressive flavours of meaning. To begin with, in the context of longer lists they can invite in a scalar additive inference ‘even’, as in (32).

⁹In the original Dutch “...wordt vóór die ‘afsluitende’ handeling nog een ‘tussenhandeling’ of ‘tussengebeuren’ ingeschoven”.

3 Non-temporal uses

(32) Mandarin Chinese

Zhāngsān dǎsǎo le fángzǐ, zuò le dàngāo hái yùn le zhuōbù.
 Z. sweep PFV house do PFV cake still iron PFV tablecloth
 ‘Zhangsan a balayé la pièce, a fait un gâteau et aussi/même repassé la nappe. [Zhangsan swept the room, baked a cake and also/even ironed the tablecloth]’ (Donazzan2008)

A scalar reading can also arise in examples like (33), where the preceding clause suggests an already noteworthy degree of consumption. In the case of Spanish *todavía*, this furthermore tends to shade over into concessive reading ‘despite all that’ (see Section 3.5.2.2).

(33) Spanish

*Después de todo lo que hab-ía com-ido todavía
 after of everything 3SG.N REL have-PST.IPFV.3SG eat-PTCP still
 pid-ió poste.
 order-PST.PFV.3SG desert*
 ‘After everything s/he had eaten, s/he also/even ordered desert.’
 (Garrido1993, glosses added)

Concessive overtones are also found with Modern Hebrew *fod* and Serbian-Croatian-Bosnian *još*. More specifically, they arise in a pattern by which the two expressions mark the introduction an additional argument to a conclusion that runs counter to shared assumptions. This is illustrated in (34, 35). A similar notion of ‘(not only that), but what is more...’, albeit without concessive flavours, also lies at the heart of *fod* and *još* as parts of ‘and how!’ formulae (Section 3.5.6.1).

(34) Modern Hebrew

Context: he did something terribly immoral.
Aval ha-ben’adam dati fod.
 but ART.DEF-guy(M) religious.SG.M still
 ‘But the fellow’s religious, what’s more!’ (Glinert1989 and Itamar Francez, p.c.)

(35) Serbian-Croatian-Bosnian

A: *Slabo ti on poznaje propise.*
 ‘He hardly knows the rules.’

B: *Još je pravnik!*
 still COP.3SG lawyer.NOM.SG
 ‘And he’s a lawyer [i.e. he of all people should know]!’
 (HJP, glosses added)

3.3 Additive and related functions

Another variation on the expressive theme is found with Swahili *bado*, the additive function of which, illustrated in (36), tends to contribute more emphasis than the common additive marker *pia* (Ponsiano Kanijo, p.c.). Lastly, comparable notions lie at the heart of the fixed Tunisian Arabic exclamation in (37a). As evidenced by the presence of the bound interrogative marker *-ši*, this idiomatic expression goes back to rhetorical questions of the type in (37b), which feature the STILL expression *māzāl* in an additive function.

(36) Swahili

- Fulani ni mw-ongo na bado ni mw-izi.*
 so_and_so(NCL1) COP NCL1-lier and still COP NCL1-thief
 'Un tel est menteur, et de plus il est voleur. [So-and-so is a lier, and on top of that s/he's a thief].' (Sacleux19391941, glosses added)

(37) Tunisian Arabic

- a. *Māzāl-ši tawwa!*
 still-Q now
 'That's enough!' (FischerEtAlTunisian)
 b. *Āš māzāl ṭrah?*
 what still HORT
 'Na, was denn noch! [What else do you want!]'
 (Singer1984, glosses added)

A closer look: non-incremental discourse While an association between an additive use of STILL expressions and incremental or cumulative notions is certainly cross-linguistically recurrent, it is important to point out that this is far from a universal pattern. For instance, Southern Yukaghir *āj* in (38) is clearly used to draw a parallel between two different topical arguments. In other words, it is found in the exact type of context that was shown to be infelicitous for the use of German *noch* in (26) above.

(38) Southern Yukaghir

- Context: people have gone gathering berries.
Met emd'e juk-ō-j, lebejdi-le āj šaqal'-e-š-nu-m.
 1SG sibling small-STAT-3 berries-ACC still gather-CAUS-IPFV-TR.3
 'Even though my younger brother was small, he was gathering berries, too.' (YukaghirTexts)

3 Non-temporal uses

The notion of a similitude is even more salient in (39), where *āj* furthermore occurs across two adjacent clauses, in a pattern broadly reminiscent of bisyndetic coordination.

(39) Southern Yukaghir

Tude-l āj met-ke-t joule-d'āj met āj joule-s'.

3SG-NOM still 1SG-LOC-ABL ask-MID-INTR.3SG 1SG still ask-TR.1SG

‘He asked questions of me, and I of him.’ (YukaghirTexts)

Apart from Southern Yukaghir *āj*, clear-cut attestations of such analogous additions feature in the data on Coastal Marind *ndom*, Gooniyandi =*nyali*, Ket *hāj*, and Udihe *xai(si)*. With Ket *hāj* and Udihe *xai(si)* this extends to equative comparisons. This is shown in (40) for the former of the two. In the case of Udihe, such comparisons furthermore play a role in a recurring collocation pattern that consists of *xai(si)* plus a set of anaphoric pronoun and which signals identity ‘that, too > the same’ (Section 2.2.5). Lastly, analogies marked by *xai(si)* also appear to lie at the root of its recurrent attestation in the apodoses of alternative concessive conditionals ‘no matter whether ...’. This is illustrated in (41) and discussed in more detail in Section 3.5.2.2.

(40) Ket

Bil'a d-i:-n-bes', tɔ?n hāj du-γ-a-daq.

like SUBJ.3SG-PST-move thus still SUBJ.3M-LNK-TH-live

‘как приехал, так и [тоже] живёт.’ [He lives the way he came, lit. the way the came, that way he also lived].’ (KotorovaNefedov2015, glosses added)

(41) Udihe

Context: once upon a time there was a Chinese tsar. He buried people alive.

Ñuŋu-za se: i:ne-wene-mie bude-isi:-ni, buge-ini, e-si:-ni,
 six-ten year come-CAUS-INF die-PFV.CVB-3SG bury-3SG NEG-PST-3SG
bude, xai buge-ini.
 die still bury-3SG

‘When a person became sixty years old, he buried him, no matter whether he was dead or not. (lit. ... he died, he buried him, he did not die, he still/also buried him).’ (NikolaevaEtAl2003)

Lastly, a very different case is found in Costal Marind, where the additive use of *ndom* is strongly associated with motion contexts. In these environments, it

3.3 Additive and related functions

comes close to a comitative marker, in that it signals that some entity goes along or is brought along. This is shown in (42).

(42) Coastal Marind

Namagha nok mend-am-b-euma<1>ah, Iwoni ndom, patul
 now 1 1.A-A-APPL-go<1.U> I. still boy
d-a-ola, imimil-patul menda-b w-in.
 DUR-3SG.A-COP:3SG.U grown_up-boy ANT:3SG.A-be 3SG.U-become
 'Now we already left, **Iwoni too**, he was a boy, a big boy already.'
 (Olsson2015, glosses added)

A closer look: additions of the same kind Issues of discourse structure are not the only possible area of divergence between STILL expressions in additive function and the garden-variety of additive markers. Another difference can be found in the fact (e.g. Koenig1991) that many of the relevant expressions allow for the focus denotation and the contextual alternatives to be of the same kind. This was shown in (22b), repeated below. Example (43) is another illustration.

(22b) Tundra Nenets

Təmna ngob ya-h xora-m xada^o
 still one place-GEN bull-ACC kill
 'He killed another mammoth.' (Labanauskas1995, cited in
 Nikolaeva2014)

(43) French

Marie a lu encore un livre.
 M. have.3SG read.PTCP still ART.INDEF:SG.M book(M)
 'Mary read one more book.' (TovenaDonazzan2008, glosses added)

In some cases, the 'in addition, also' and 'another, more' readings are distinguished formally. With German *noch*, this distinction is primarily prosodic. When more of the same kind is added, this particle normally receives focal stress, as in (44a), whereas stress otherwise tends to fall on the constituent denoting the additional item; see (44b).

(44) German

- a. *Ich trink-e 'noch ein Bier.*
 1SG drink-1SG still ART.INDEF:ACC.SG.N beer(N)
 'I will have another beer.'

3 Non-temporal uses

- b. *Ich trink-e noch ein Bier.*
 1SG drink-1SG still ART.INDEF:ACC.SG.N beer(N)
 'I will have a beer (in addition to whatever I had before)'
 (Koenig1991, personal knowledge)

In other cases, the distinction is marked purely structurally. Thus, Tundra Nenets *təmna* is a phrasal adjunct to the constituent containing the focus only when signalling 'another', but not as 'in addition, also'. The same appears to be the case with Classical Nahuatl *oc*, Modern Hebrew *fod*, and, as a strong tendency rather than a hard-and-fast rule, with French *encore*. With Southern Yukaghirk *āj/ajī* the two readings are distinguished in syntactic terms as well as in the morphological domain. Thus, the variant *āj* marks 'in addition' and normally occurs in the pre-verbal position, as shown in (45a). The variant *ajī*, on the other hand, is used when identity of kind is at stake. It can only take the P-argument of transitive verbs as its focus and is a syntactic sister to the latter; see (45b).

(45) Southern Yukaghirk

- a. *Ōži el-jūke l'e-t-i kind'e pod'erqo āj*
 water NEG-far COP-FUT-INTR.3SG moon light still
l'e-t-i.
 COP-FUT-INTR.3SG
 'The water will not be far, and there will be moonlight, **too**.'
- b. *Met āj čumuč-ie-je, [ajī ningō]NP ī-de-j.*
 1SG still fish-INCH-INTR.1SG still many get_caught-CAUS-1PL.TR
 'I began to fish, too, we have caught **much more**'
 (Maslova2003)

With several sample expressions, such an 'another, more' reading has given rise to a repetitive event construal when paired with an event quantifier ('another time > again'). Example (46) is an illustration. I discuss this pattern in more detail in Section 2.4.2.2.

(46) German

- Opposition gewinn-t Wahl in Istanbul: İmamoğlu*
 opposition win-3SG election.ACC.SG in Istanbul İmamoğlu
macht-'s noch ein-mal
 make.3SG-3SG.ACC.N still ART.INDEF-time
 'Opposition wins elections in Istanbul: İmamoğlu does it **again**'
 (found online, glosses added)

3.3 Additive and related functions

With Classical Nahuatl *oc*, the notion of ‘another’ has brought about a function in which it marks the existence of a distinct entity of the same kind ‘other, different’. This is shown in (47a) and discussed in Section 3.3.9. Closely related to both senses, *oc* also commonly participates in marking the comparative degree of a predicate (Appendix E.1.1.6.2), as in (47b).

(47) Classical Nahuatl

- a. *Nicān cā ce tepētl: cān cā in oc-cē?*
here LOC.COP one mountain where LOC.COP DET still-one
‘One mountain’s here. Where’s the **other one?**’
(LauneyMackay2011, glosses added)
- b. *Oc achi ni-chicāhuac in àmo mach yuhqui tēhuātl.*
still rather/a_bit SUBJ.1SG-strong DET NEG indeed thus 2SG
‘Mas fuerte soy que tu [I’m stronger than you, lit. I have
another/different bit of strength that you don’t].’
(Carochi1645, glosses added)

Also closely related to additivity plus identity of kind, Modern Hebrew *sod* and Serbian-Croatian-Bosnian *još* can serve as indefinite quantifiers ‘some more’; see (48, 49).

(48) Modern Hebrew

- Etmol axal-ti 3 tapuz-im. Ha-yom axal-ti sod*
yesterday eat.PST-1SG 3 orange-PL.M ART.DEF-day eat.PST-1SG still
(*tapuz-im*).
orange-PL.M
‘Yesterday I ate 3 oranges. Today I ate **some more** (oranges).’
(Greenberg2012)

(49) Serbian-Croatian-Bosnian

- Kad su prodali svoje čudesne ljekarije bolje nego što su mislili*
‘When their miracle potion sold better than they had thought,’
otišl-i su kući po još.
leave.PTCP-PL.M COP.3PL home.DAT.SG for still
‘they went home **for more**.’ (HJP, glosses added)

Modern Hebrew *sod* in post-predicate position can also quantify over an intransitive verbal predicate, yielding ‘do some more’, as shown in (50). The same is found with Northern Qiang *tce-*, where this specific usage is restricted to the prospective aspect inflection; see (51).

3 Non-temporal uses

- (50) Modern Hebrew

Ba-boqer Rina rats-a ktsat. B-a-tsoharayim hi
 at-morning Rina run.PST-3SG.F a_bit at-ART.DEF-noon 3SG.F
rats-a fod.

run.PST-3SG.F still

'In the morning Rina ran a bit. At noon she ran **some more**.'
 (Greenberg2012)

- (51) Northern Qiang

Qa t̪ca-na:
 1SG still-sleep.PROSP
 'I'm still going to sleep (I want to sleep **some more**).'
 (LaPollaHuang2003)

Lastly, the case of English *still* is related to both additions of the same kind and the incremental discourse strategies discusses above, in that this expression only has an additive use in list continuations of the type '... another, still another', as in (52)

- (52) English

Context: after having discussed two creative periods of the same writer.

Still a third type of fiction appeared in the 1950s with Mrs. Miller's successful stories of Christmas at the homes of famous men. (found online)

A closer look: together with other additive markers My discussion up to this point has focussed primarily on differences to other additive expressions. However, and as with many functional extensions of STILL expressions, the use I discuss here is repeatedly attested together with other linguistic items carrying a similar meaning. For instance, in (53) Ewe *ga-* goes together with additive *hâ*, the two expressions sharing the same focus. Example (54) from Serbian-Croatian-Bosnian is another illustration.

- (53) Ewe

É-nye hatí-nyè, ga-nyé xɔ̄-nyè hâ.
 3SG-COP colleague-1SG still-COP friend-1SG also

'Il est mon camarade mais aussi mon ami [He's my colleague, and also my friend]' (Westermann1905, glosses added)

- (54) Serbian-Croatian-Bosnian

3.3 Additive and related functions

Pametna je devojka, a sad je još i ljuta.
smart.NOM.SG.F COP.3SG girl(F).NOM.SG and now COP.3SG still also
angry.NOM.SG.F
'She's a smart girl, and now an **angry one, too**.'
(found online, glosses added)

Trió = *nkérē* in additive function is sometimes encountered with the clausal connective *se(h)ke(n)* 'also, likewise' as its host. Judging from the available examples, this usage stresses the notions of continuity and parallelism, and it straddles the boundary to constituent coordination

- (55) Trió
Kure menu=tao=ken t-ee-se nérë, Waruku
 pretty paint=LOC=CONT REM.PST-COP-REM.PST 3.ANAPH.ANIM W.
i-nmuku-pisi seke=nkëré t-ee-see.
 3-son.POSS-DIM also=still REM.PST-COP-REM.PST
 'Waruku was beautifully painted, and so was her little son.'
 (Meira1999)

The same kind of superficial redundancy is also attested with the ‘another, more’ reading of **STILL** expressions. For instance, in (56) Southern Lengua *makham* goes together with *pók* ‘another’. More research on usage patterns is needed to disentangle the individual and joint contribution of each item in such instances.

- (56) Southern Lengua
Ap-tép-ekx-eyk=axta makham pók wesse' neptámen=axta
 M-emerge-ITER-DECL=PST still other.M leader(M) after.M=PST
 'Another leader rose up after him.' (Elliot2021)

A closer look: additivity and repetitions Earlier I pointed out that the additive use of a **STILL** expression, together with an quantifier ‘time(s)’, can give rise to an repetitive event construal ‘again’. This is not the only similarity between the two domains, as has been repeatedly observed in the pertinent literature, both in regards to **STILL** expressions and to items which do not have this phasal polarity function.¹⁰ In broad strokes, additivity often goes along with the recurrence

¹⁰See, for instance, Donazzan2008, Evans1995Mayali, MosegaardHansen2008, Huang2008, Lichtenberk1991, Liu2000, Maslova2003, McGregor1990, TovenaDonazzan2008, Yeh1998 and Zhang2017.

3 Non-temporal uses

of a similar situation across different times and/or sets of participants, similar to how ‘again’ involves the iteration or restoration of a previous state-of-affairs.¹¹ To give an example, in (57) an identical act is performed by the same participants on two different days, thus making an additive and iterative interpretation virtually indistinguishable.

(57) Southern Yukaghir

- D'e tanj jeklie āj ekr-īl'i sobenn'i āj ejr-īl'i.*
 DM that behind still walk-INTR.1PL today still walk-INTR.1PL
 ‘Well, we walked beforehand, too, and we walked again today.’
 (Maslova2003)

In Gurindji, the notional link between the two functions is reflected in morphology. Thus, the STILL expression *=rni* forms part of a complex clitic *=rningan*, the source of the second syllable of which remains obscure. Importantly, *=rningan* is specialized for marking repetitions and additivity. This is illustrated in (58).

(58) Gurindji

- a. *Karu-ngku wumara=ma jakarr ma-ni=rni-ngan.*
 child-ERG money=TOP cover get-PST=still-?
 ‘A child covered up the money again.’
- b. Context: someone else has fallen.
Karu=ma ngaja wani-nyana=rni-ngan.
 child=TOP ADMONITIVE fall-PRS=still-?
 ‘The child might fall too.’ (McConvell1983)

While examples (39, 58b) feature ‘in addition, also’ readings, the same conceptual overlap can be observed between iterative event construals and the ‘another, more’ type of additivity. For instance, the Saisiyat example (59) can be read as iterative ‘see some boy coming again’, or as involving the addition of an entity of the same kind ‘see another boy coming’, with little to no difference in communicative import (Huang2008).

(59) Saisiyat

Context: from a rendition of the pear story. A boy with a goat has passed by. Now a boy on a bicycle is passing by the same location.

¹¹Out of the twenty-nine expressions in Table 3.2, ten have an iterative and/or restitutive use. These are Classical Nahuatl *oc*, Ewe *ga-*, French *encore*, Gooniyandi *=nyali*, Kaba *bbáy*, Ket *hāj*, Mandarin Chinese *hái*, Paiwan *=anan*, Saisiyat *nahan*, and Southern Lengua *makham*.

3.3 Additive and related functions

‘Tamèn zǒu lá. Yòu kàndào lìngyìgè nánháizi lái lá. Ta qízhé jǐaotàche. / (Off) they went. (Then I) see another boy coming; he was riding a bike.’ (Huang2008)

A very similar case can be made for Southern Lengua *makham* in (60). Here, the predicate *apchaqha* can be interpreted as intransitive, with the STILL expression contributing iterativity 'he killed again'. Alternatively, it can be read as involving an implied indefinite patient argument of the same kind 'he killed another one' (John Elliot, p.c.). I discuss more examples of this kind below.

- (60) Southern Lengua

Context: a boy has fought off a demon. Another demon has appeared.

Natámen apch-aqh-a makham w-okm-ek=axta
 then M-kill-NMLZ.IPFV still F.arrive-TERMINATIVE-DECL=PST
a-anet apk-ennap-ma tén.
 FSTAT-two M-kill_many-NMLZ.PFV then

‘Then he killed it [again], coming to two of them he had battled, and...
 (Elliot2021)

Lastly, in the case of Hills Karbi *-làng* the connection between additivity and repetition is reflected in co-occurrence patterns. Thus, the **STILL** expression *-làng* as ‘another, more’ often goes together with the repetitive suffix *-thū*, as in (61).

- (61) Hills Karbi
Isī a-lám dō-thū-làng.
one poss-matter exist-again-still
'There is still one other thing.' (Konnerth2014)

Discussion I now turn to a discussion of the motivation underlying the co-expression of additivity and **STILL**. In the most abstract terms, both functions share a common denominator in the inclusion of entities, or existential quantification (vanderAuwerla1993; Doherty1973; Liu2000; Koenig1977; Maslova2003; Noelke1983; among others). In other words, using an additive operator requires

3 Non-temporal uses

that the common ground contain at least one valid alternative to the focus denotation, similar to how the phasal polarity concept contributes the presupposition that its propositional argument held true during an interval immediately preceding topic time. As I hinted at above, a very similar parallels holds between additive and ‘again’ uses of the same expressions. With that in mind, several links are conceivable and/or attested. In what follows, I briefly sketch out some of them and how they apply to the sample languages, without any any claim to comprehensiveness.

A direct nexus between phasal polarity **STILL** and the additive use can be assumed, based on etymological and/or diachronic data, for French *encore*, German *noch*, Serbian-Croatian-Bosnian *još*, Tundra Nenets *təmna*, Tunisian Arabic *māzāl*, and, albeit more tentatively so, Thai *yai*. As I pointed out above, there are recurrent contexts in which the two functions overlap, which suggests that similar instances may have served as diachronic bridges. For instance, example (23), repeated below, can be read as signalling the persistent need for a certain piece, or as involving an addition to the list of parts used. A very similar case is found in the Spanish example (62).

(23) German

Context: the speaker is assembling a wooden toy plane.

Also und ach so, und dann brauch-e ich noch eine

well and INTERJ and then need-1SG 1SG still ART.INDEF:ACC.SG.F

Siebener-leiste.

seven_piece-bracket(F)

‘Well and oh yes, and then I **also need/still need** a 7-hole piece.’

(Nederstigt2003, glosses added)

(62) Spanish

Todavía ten-go que entreg-ar dos informe-s.

still have-1SG SUBORD hand_in-INF two report-PL

‘I **still have to hand in two reports / I still have to hand in two more reports.**’ (Bosque2016, glosses added)

As I also indicated initially, such cases of ambiguity are particularly pronounced when the persistent duration of a situation is at stake, such as in (24), repeated below. A comparable instance is found in the Old French example (63), except that time is here mediated by stretches of a path.

(24) German

3.3 Additive and related functions

Wie lange wird denn das noch dauer-n?

how long FUT.AUX:3SG DM 3SG.N still last-INF

‘For how long is this still going to last? / How much longer will this take?’ (Schnitzler, *Leutnant Gustl*, cited in Shetter1966, glosses added)

(63) Old French, 13th century

Et se vous baés orendroit a cevauchier vers la Petite Bretaingne, ceste autre voie vous i menra tout droit.

‘And if you wish now to ride to Brittany, this other road will take you straight there.’

Et se vous volés encore une piece cevauchier pour and if 2PL want.2PL still ART.INDEF:SG.F bit(F) ride.INF for voir les merveilleuses aventure d-u see.INF ART.INDEF:PL.F marvellous.PL.F adventure(F).PL of-ART.DEF:SG.M roiaume de Logres, avoec moi poés cevauchier...
realm(M) of L. with 1SG.OBJ can.2PL ride.INF

‘And if you still want to ride a bit with me/if you want to ride another bit with me to see the marvelous adventures of the kingdom of Logres, you can ride with me...’ (Tristan en prose, cited in MosegaardHansen2008, glosses added)

While examples (23, 24) and (62, 63) involve contextual ambiguity, a more direct, metonymical transfer from the propositional to the textual domain is also attested. Thus, in the oldest clear-cut attestation of French *encore* as ‘in addition, also’, given in (64), the notions of persistence and a possible discontinuation are applied to a succession of related events instead of a single situation. Or, as MosegaardHansen2008 puts it, “in spite of the telicity of the verb *ocire* ['kill']”, this example “may be loosely understood as meaning that ... the subject ... remains in a 'killing-mode'”. Lastly, against the background of these examples, the preference for markers such as *noch* or *encore* for an incremental discourse organization, discussed earlier, is surely a synchronic reflection of the origins of their additive function.

(64) Old French, ca. 1080

Aprofli ad sa bronie desclose, // El cors li met tute l'enseigne bloie, // Que mort l'abat en une halte roche. //

‘Afterwards, he tears open his coat of mail, He drives the entire blue ensign into his body, Killing him on a tall rock.’

3 Non-temporal uses

Sun *cumpaignun Gerers ocit uncore, // E Berenger e*

guiun de Seint Antonie.
 G. of S.-A.

‘He also kills his companion Gérier, and Berenger and Gui de Saint-Antoine.’ (*La chanson de Roland*, cited in **Mosegaard Hansen 2008**, glosses added)

As just hinted at, an extension from phasal polarity to marking additivity involves the well-known tendency for meaning to become increasingly based in the textual domain (Section 1.6.2). The same is true of an extension from an iterative/restitutive function to additivity. The primacy of repetition can be firmly established for Mandarin Chinese *hái*, which has its lexical source in a motion verb *huan* ‘go back’. As laid out by **Yeh 1998**, this item first developed into a restitutive marker, then acquired an iterative sense, and only centuries later came to signal STILL. Crucially, the additive sense arose before the phasal polarity one. The same is likely true for Ewe *ga-* which has a similar lexical source. Against this backdrop, **Yeh 1998** points to cases like the Middle Chinese example (65) as historical bridges from iterativity to additivity. Under a more conservative reading, this example would have been understood as involving two similar and sequentially ordered events, but with a different topical argument. At the same time, the host clause of *hái* clause can be understood as introducing an additional reason for the same conclusion as the first clause, namely the difficulty of the trip, and the presence of *ji* ‘as well as’ likewise yields a bias towards an additive interpretation.

(65) Middle Chinese

Ji shang qian li mu, hai jing jiu zhe hun.
 as well as hurt thousand mile eye still frighten nine turn soul

‘Not just the view of the long trail makes you said, the winding turns also frighten you.’ (**Yeh 1998**)

Whereas (65) involves a pathway from ‘again’ to ‘also, in addition’, a similar convergence in meaning can be found for additivity plus identity of kind. For instance, in the context of (59), repeated below, an iterative interpretation ‘again I see a boy coming’ and an additive reading ‘I see another boy’ overlap considerably, with little to no difference in communicative terms.

(59) Saisiyat

Context: from a rendition of the pear story. A boy with a goat has passed

3.3 Additive and related functions

by. Now a boy on a bicycle is passing by the same location.

O: *rima' ila hiza / kita'-en m-wai' ila naehan /*

 vehicle

‘Tamèn zǒu lè. Yòu kàndào lìngyigè nánháizi lái lè. Ta qízhè jiāotàche. /
 (Off) they went. (Then I) see **another boy** coming; he was riding a bike.’
 (Huang2008)

The Old French example (66) is another illustration. At the time of this attestation, the expression *encore* had already acquired an iterative use, whereas the ‘another, more’ function was yet to be established. As **MosegaardHansen2008** points out, attestations like (66) figure prominently among the critical contexts in that development.

- (66) Old French, early 13th century

Context: the barons have given the emperor a respite. Now the date has passed.

Et li empereres redemande encore
 and ART.DEF:SG.M emperor(M) ask_again.PST.PFV.3SG still
un respit, et on li donna.

ART.INDEF:SG.M respite(M) and IMPR 3SG.DAT give.PST.PFV.3SG

‘And the emperor asked for a respite again/asked for another respite, and it was given him.’ (de Clari, *La conquête de Constantinople*, cited in **MosegaardHansen2008**, glosses added)

Lastly, it is conceivable that the function of a given expression as an exponent of **STILL** may go back to an element with an incremental meaning, via ‘Verb more >still’. Thus, Northern Qiang *tce-* is suspiciously similar to the superlative marker *tci-*, both in its segmental make-up and in the linear position it occupies on the predicate, except that the superlative marker does not undergo vowel harmony. This is shown in (67). In the same vein, **HeineEtAl1984** indicate that in certain varieties of Southern Kikongo (Bantu, not in my sample) a verb with the meaning of ‘add, put more’ has grammaticalized into a **STILL** expression.

- (67) Northern Qiang

'S/he who likes to sleep late is still sleeping.'
- b. *tci-χtsa*
most-small
'smallest' (LaPollaHuang2003)

3.3.3 Further-to

Introduction In this subsection, I discuss what Klein2018 calls the “further-to” use.¹² In this function a STILL expression marks a combination of additive and phasal notions. This is illustrated in (68), where German *noch* depicts taking a shower as an additional act within the current frame of experience, which is defined by the preceding soccer practice. At the same time, using *noch* hints at the subsequent transition to a new section of the day, which is made explicit in the following clause.

- (68) German
- Context: I have just come home from soccer practice. It is fairly late.
Ich dusch' *noch. Dann gibt's* *Abend-essen.*
 1SG take_shower.1SG still then EXIST.3SG-3SG.N evening-meal(N)
 'I'm just taking a quick shower. Dinner will be just after.' (Beck2019)

The further-to use differs from the more general additive one I discuss in Section 3.3.1 in that the relevant statements “can be uttered out of the blue and allow for accommodation of the additional item” (Umbach2012; also see Klein2018; Nederstigt2003; Vandeweghe1984). Thus, example (68) could be produced right upon walking through the door and being met by hungry faces, without the need for any further discursive embedding. Example (69) from Hills Karbi displays a parallel case.

- (69) Hills Karbi
- Context: there is a plan to go to the market.
Rí chersām-dām-làng.
 hand wash-go-still
 'I'm just gonna go wash my hands real quick (and then we can go).'
 (Konnerth2014)

¹²Nederstigt2003 speaks of “additive before a turning point” and Vandeweghe1984 subsumes this use under “antiterminativeit ... met externe relevantiecrterium” [antiterminativity with an external criterium of relevance].

3.3 Additive and related functions

Distribution in the sample The further-to use is attested for the two sample languages and expressions illustrated in (68, 69), German *noch* and Hills Karbi *-làng* (Appendices D.3.1.7.2, D.5.1.4.2).¹³ That said, in Section 2.4.5.1 I discuss a use of STILL expressions as markers of precedence ‘first, for now’. And as has been seen in (68, 69), the further-to use also tends to invite a contrast with subsequent times. With this in mind, upon examination of more data some of the items discussed in Section 2.4.5.1 may turn out to have the further-to use rather than a purely relational one.

A closer look and discussion I now turn to a closer look at the further-to use and a discussion of its motivation. While examples (68) and (69) both feature prospective statements, this use is also found in other temporal-aspectual configurations. Example (70) is an illustration featuring the present tense in a generic reading. For an example in the past, see (73) below. In the case of German *noch*, one could subsume the future ‘eventually’ use I discuss in Section 2.4.4 here, as well.

(70) German

Früher ist's mir immer sonderbar vorgekommen, dass die Leut', die verurteilt sind,

‘I used to find it strange that people that have been sentenced [to death]’

in der Früh noch ihren Kaffee
in ART.DEF:DAT.SG.F morning(F) still POSS.3PL:ACC.SG.M coffee(M)

trink-en und ihr Zigarr-l rauch-en.
drink-3PL and POSS.3PL:ACC.SG.N cigarette-DIM(N) smoke-3PL

‘would have coffee and a cigar in the morning [before getting executed].’
(Schnitzler, *Leutnant Gustl*, cited in Shetter1966, glosses added)

As has been repeatedly been observed in the literature on German and Dutch (e.g. Klein2018; Nederstigt2003; Shetter1966; Vandeweghe1984), there is a noteworthy similarity between the further-to use and phasal polarity STILL, in that both functions involve a segmentation of the time-line based on persistence vs. a possible discontinuation. The main difference is that in the case of STILL this perspective is directly based on the situation described in its propositional argument, whereas in the further-to use the ‘it's not over yet’ meaning applies to a larger frame of experience, or a series of contiguous events. Figure 3.3 is a graphic illustration, based on (68).

¹³Outside of the sample, the further-to use has been described for Dutch *nog* (Vandeweghe1984) and for Hungarian *még* (CsirmazSlade2020).

3 Non-temporal uses

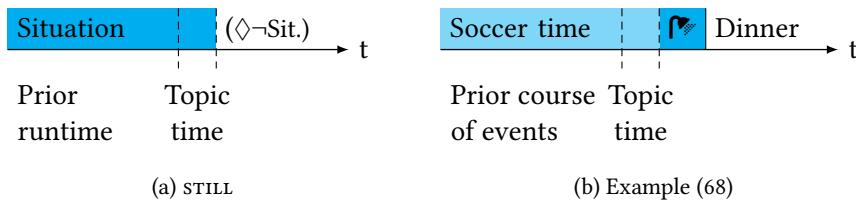

Figure 3.3: Schematic illustration of the further-to use

In more applied terms, there are at least two functions and usage patterns that likely motivate the further-to use. First, both German *noch* and Hills Karbi-*-làng* have a general additive use. As I discuss in Section 3.3.1, there is a cross-linguistic tendency for this functional extension to preserve the “antiterminative” (Vandeweghe 1984) core of phasal polarity STILL. In the narrative genre of texts, this tendency often manifests itself as the insertion of one last event before a contextually given turning point. An illustration of German *noch* in such an embedding is given in (71), where the slamming shut of the door forestalls the end of the narrative episode.

(71) German

Da gab ihm der Vater von hinten einen jetzt wahrhaftig erlösenden starken Stoß, und er flog, heftig blutend, weit in sein Zimmer hinein.

‘Then his father gave him a strong and liberating push from behind, and he scurried, bleeding heavily, far into his room.’

Die Tür wurde noch mit dem

ART.DEF:NOM.SG.F door(F) become.PST.3SG still with ART.DEF:DAT.SG.M

Stock zugeschlagen, dann wurde es endlich still.

cane(M) slam_shut.PTCP then become.3SG 3SG.N finally quiet

‘The door was slammed shut with the cane, and finally all was quiet.’

Erst in der Abenddämmerung erwachte Gregor aus seinem schweren ohnmachtähnlichen Schlaf.

‘It was not until the dawn of evening that Gregor awoke from a deep and swoon-like sleep.’ (Kafka, *Die Verwandlung*, glosses added)

A similar case is shown in (72) for Hills Karbi. Here, -*làng* marks the quick tea stop as one last step in the initial stage of the trip, after which the speaker and company set out for the main part of their journey.

(72) Hills Karbi

Context: from the beginning of the recollection of a trip.

3.3 Additive and related functions

...là elilitūm ajirpò alànglì Yu'éspensi kevàng Kavòn Kavòn aphāntā cheponlò

‘... this friend of ours, he who has come from the US, Kavon, Kavon we also took along with us.’

drink-in_passing-still

'And then, from here we went, we stopped by in Dimapur [about a quarter of the way in] and just had tea.'

lasì bají sirkē-bāk apòrpe=si puthōt dàmthūlò Kohìmàán továr kēkò

‘At nine o’clock, from about that time, we again went, up to Kohima, the road is winding a lot.’ (KonnerthTisso2018)

There is a fluent transition between the pattern in (71, 72) and the further-to-use in (73). Here, the preceding clause depicts the lack of any relevant occurrence and the subsequent addition of an eventive predicate therefore requires accommodation as the proverbial “one last thing”.

- (73) German
Die erste Halbzeit verlief torlos,
'the first half-time passed by without any goals,'
Aber in der 2. Halb-zeit schoss Bayern München
but in ART.DEF:DAT.SG.F 2. half-time(F) shoot.PST.3SG Bayern Munich
noch zwei Tor-e.
still two goal-PL
'but in the second half-time Bayern Munich (eventually) did score twice.' (HoepelmanRohrer1980, glosses added)

As I hinted at earlier, German *noch*, but not Hills Karbi *-lāng*, has an ‘eventually’ function in future-oriented contexts like (74). This latter use shares a common denominator with the use I discuss here in the element of “before all is over” (OED2022). As I argue in Section 2.4.4, the most likely source for the ‘will eventually’ function lies in contexts in which a STILL expression associates with a modal proposition ‘can/must still ...’, giving rise to a reanalysis as ‘can/must ... yet (before it’s over)’. A similar case can be made for the further-to use. In other words, it is conceivable that an instance like (75) is ambiguous between a reading of a persistent necessity and an interpretation involving the need to perform one more task before transitioning into a new phase of life.

3 Non-temporal uses

(74) German

Wir mach-en noch einen gut-en Kricket-spieler

 of 3SG.DAT.M

‘We’ll make a good cricketer of him yet.’ (Koenig1977, glosses added)

(75) Hills Karbi

Context: two children, adopted by tigers, want to live with their biological father, a king.

Nè ne-pēi ne-pō aphañ
 1EXCL POSS.1EXCL-mother POSS.1EXCL-father NON.SUBJ
che-arjū-dām-lāng.
 REFL/RECP-ask-go-still

‘We still need to ask our mother and father (for permission to stay with the king).’ (KonnerthTisso2018)

It is probably a combination of the patterns just outlined that led to the emergence of the further-to use in the history of German *noch*, Hills Karbi *-lāng* and other items with this function.

3.3.4 Scalar additive

Introduction In this section, I discuss scalar additive uses of STILL expressions. As I lay out in more detail in Section 1.6.4.2, scalar additive operators signal that the focus denotation yields a more informative proposition than all alternatives under consideration. Example (76) is an illustration. Here, Spanish *aún* indicates that the denotation of the focus ‘the winds and the water’ yields a stronger statement about the subject’s powers than all accessible alternatives.

(76) Spanish

¿Quién es éste, que mand-a aun [a los
 who COP.3SG PROX.SG.M SUBORD command-3SG still ACC ART.DEF:PL.M
viento-s y a-l agua]FOC y le obedec-en?
 wind(M)-PL and ACC-ART.DEF:SG.M water and 3SG.DAT.M obey-3PL
 ‘Who is this? He commands even the winds and the water, and they obey him.’ (Luke 8:25, *La biblia al día*, cited in GastvanderAuwera2011)

In (76) there is a positive correlation between a scale of difficulty and the strength of the overall proposition. In (77), on the other hand, this relationship is

3.3 Additive and related functions

inversed. Thus, merely mentioning the desobedient's secret acts is less involved than observing or performing them. Yet it yields a more informative answer to the question of how despicable these acts are.

(77) Spanish

...	<i>d-a</i>	<i>vergüenza</i>	<i>aun</i>	<i>[mencion-ar]</i> _{FOC}	<i>lo</i>	<i>que</i>	<i>los</i>
	give-3SG	shame	still	mention-INF	3SG.N	SUBORD	ART.DEF:PL.M
	<i>desobediente-s</i>	<i>hac-en</i>	<i>en</i>	<i>secreto.</i>			
	desobedient-PL	do-3PL	in	secret			
	'It is shameful to even mention what the desobedient do in secret.'						
	(Eph. 5:12, <i>La biblia al día</i> , cited in GastvanderAuwera2011)						

Scalar additives can be sensitive to the direction that inferences run. Following **GastvanderAuwera2011** (**GastvanderAuwera2011**, **GastvanderAuwera2013**), I refer to markers that are only used in contexts like (76) as BEYOND operators, and to those that require contexts like (77) as BENEATH operators. Items like Spanish *aún* or English *even*, which are compatible with both types of context, are termed UNIVERSAL scalar additives. Note that I discuss scalar additive uses that are specialized for temporal foci ('as early/late as, as far removed as') separately in Section 2.5.2.3. Lastly, for a discussion of 'even more' in comparisons of inequality, see Section 3.3.5.

Distribution in the sample Table 3.3 lists the expressions in the sample that are attested as scalar additive operators. On examination, several things stand out. First, with only four expressions this use is strikingly rare, given the high number of expressions attested in a plain additive use (Section 3.3.1). Secondly, all instances stem from Eurasia and, as this geographic distribution already suggests, they involve invariant small words. One item, Spanish *aún*, not only serves as a scalar additive by itself, but also forms part of a fixed polymorphemic collocation. The latter is not only a structural outlier, but also the only BENEATH operator in Table 3.3, whereas all other instances involve either BEYOND operators or a UNIVERSAL scalar additive sense.

A closer look I now turn to a closer look at the scalar additive use. To begin with, the inclusion of Ket *hāj* as a scalar additive is somewhat tentative. There is only one relevant example in the data, given in (78), and it is possible that the scalar reading is a contextual inference of what is essentially an 'also' use.

3 Non-temporal uses

Table 3.3: Scalar additive uses

Macro-area	Language	Expression	Collocation	Type	Appendix
Eurasia	German	<i>noch</i>	n/a	BEYOND	D.3.1.7.3
	Ket	<i>hāj</i> [*]	n/a	BEYOND(?)	D.7.1.4.2
	Spanish	<i>aún</i>	n/a	UNIVERSAL	D.13.1.7.2
		<i>aún</i>	<i>aunque sea</i> 'even if it were'	BENEATH	D.13.1.7.3
	Thai	<i>yaŋ</i>	n/a	BEYOND	D.14.1.5.2

* Inclusion is tentative: only one example in the data.

- (78) Ket

 subj.3-TH-PRS-search_for-when 3SG person still subj.3-OBJ.3M-kill
 'When he looks, he can even kill a man.' (Nefedov2015)

Spanish *aún* as ‘even’, which was seen in (76, 77), underlies a multitude of concessive constructions, which I examine in more detail in Section 3.5.2. For instance, in (79) *aún* occurs in collocation with the subordinator *que* and the subjunctive mood, together marking the apodosis of a concessive conditional sentence ‘even if’. Below I discuss how such concessive conditionals, in turn, lie at the heart of the second Spanish item in Table 3.3, the morphologically complex BENEATH operator *aunque sea* ‘so much as’, lit. ‘even if it were’, which is illustrated in (80).

- (79) Spanish

 'Too many questions... too many questions...'
 B: *Contesta aun-que sea un-a.*
 answer.IMP still-SUBORD COP.SBJV.3SG one-F
 'Answer at least one of them.' (CORPES XXI, glosses added)

3.3 Additive and related functions

German *noch* as a scalar additive is illustrated in (81). As I discuss in more detail in **PersonhSchonNoch**, *noch* constitutes a BEYOND operator that evokes a scalar model of degrees of sufficiency. As an additional twist, it requires a negatively defined scale. For instance, *noch* in (81) highlights that something as far removed from the standards of reason as the most stupid social media post (i.e. a high degree of *incredibility*) is judged to be plausible enough by the former president's supporters.

(81) German

Die einen feiern schließlich die dreiste Selbstermächtigung von Trump und Co. und reden sich beharrlich ein,

'Lastly, some celebrate Trump and company's bold self-authorization and talk themselves into believing'

*dass noch [der dümmt-e Tweet]*_{FOC}

COMP still ART.DEF:NOM.SG.M stupid.SUP-NOM.SG.M tweet(M)

die Wahrheit spräch-e.

ART.DEF:NOM.SG.M truth(F) speak-SBJV.3SG

'that even the most stupid tweet speaks the truth.'

(found online, glosses added)

This stylistically somewhat marked use of *noch* finds its mirror image in the much more common case of the ALREADY expression *schon* as a BENEATH operator. This is illustrated in (82), where the focus denotation 'one cup per day' is related to a possibly higher intake of coffee.

(82) German

*Schon [ein-e Tasse a-m Tag]*_{FOC} *senkt*

already one-NOM.SG.F cup(F) at-ART.DEF:DAT.SG.M day(M) lower-3SG

dauerhaft den Blut-druck.

permanently ART.DEF:ACC.SG.M blood-pressure(M)

'So much as one cup [of coffee] per day results in a permanently lower blood pressure.' (found online, glosses added)

Lastly, most of the expressions in Table 3.3 tend to sister the constituent containing the focus, as is common of focus-sensitive operators. The exception is Thai *yan*, illustrated in (83), which invariably follows the subject NPs and precedes all elements belonging to the predicate.

(83) Thai

Fääfèet khûu nîi măuan kan píap. Bañkhráñ phɔɔ mêe yan

3 Non-temporal uses

yēek māi ʔɔɔk.

seperate NEG out

‘The two twins look exactly alike; sometimes even their parents can’t tell them apart.’ (found online)

Discussion To make sense of why STILL expressions may serve as scalar additive operators, it is worthwhile approaching the topic from a diachronic angle. To anticipate some of the following discussion, in all instances the link to phasal polarity appears to be a fairly indirect one that is mediated by other functions.

Earlier I suggested that an ‘even’ reading of Ket *hāj* may be a contextual inference, and in Section 3.3.1 I discuss how STILL expressions used as plain additives can, given the right context, trigger a scalar inference. According to Trujillo1990, the conventionalization of such an erstwhile pragmatic interpretation is what lead to the scalar additive function of Spanish *aún*. With this in mind, an example like (84) constitutes a likely diachronic bridge from ‘in addition’ to ‘even’. Here, the discourse context evokes a scale of affectedness on which the focus denotation ‘his body and soul’ ranks higher than the alternative ‘his possessions and eyes’ mentioned in the preceding clause. Most likely, a similar scenario can be posited for Thai *yan*, seen in (83) above.

- (84) Old Spanish, 11th/12th century

Aquel que gela diesse sopesse una palabra // Que perderie los aueres e mas los oios de la cara //

‘Let anyone who might give it to him know, that he would lose his possessions and the eyes of his head’

E aun demas los cuerpo-s e las alma-s.
and still other ART.DEF:PL.M body(M)-PL and ART.DEF:PL.F soul(F)-PL

‘And, furthermore, also/even his body and soul.’ (*Cantar de mio Cid*, cited in Trujillo1990, glosses added)

Importantly, in (84) the focus denotation corresponds to a high degree on the relevant scale, whereas in the present-day variety *aún* is also compatible with particularly low-ranking foci. This was seen in (77), repeated below. This distribution suggests that, once the scalar additive use had become established, it underwent context expansion and a concomitant generalization of meaning.

- (77) Spanish

... d-a vergüenza aun [mencion-ar]_{FOC} lo que los
give-3SG shame still mention-INF 3SG.N SUBORD ART.DEF:PL.M

3.3 Additive and related functions

desobediente-s hac-en en secreto.

desobedient-PL do-3PL in secret

‘It is shameful to even mention what the desobedient do in secret.’

(Eph. 5:12, *La biblia al día*, cited in *GastvanderAuwera2011*)

Presumably, an intermediate stage in this process involved the use of the expression in environments of clause-mate negation; see *GastvanderAuwera2011* for general discussion. An example of such an instance is given in (85).¹⁴ Subsequently, *aún* would have expanded to non-negative scale reversal contexts like (77). Validating this scenario is an open task for diachronic corpus work.

(85) Spanish

No ten-go yo tanto, ni aun la mitad.

NEG have-1SG 1SG that_much nor still ART.DEF:SG.F half(F)

‘I don’t have that much, **not even** half as much.’

(RAEDictionary, glosses added)

Scalar inferences are not the only conceivable source of a scalar additive function. In Section 2.5.2.3 I discuss a use of STILL expressions that closely resembles a scalar additive operator, except for being restricted to scales of time. This is illustrated in (86), where German *noch* highlights that the common ground contains earlier (i.e. lower) alternatives.

(86) German

Polizei und den Insel-bewohner-n.

police(F) and ART.DEF:DAT.PL island-inhabitant-DAT.PL

‘As late as last week, altercations between the police and the islanders occurred.’ (found online, glosses added)

While the focus in (86) is strictly temporal, the conceptual gap to a more general scalar additive operator is narrowed considerably in examples like (87), where time is mediated by metonymy.

¹⁴Note how *aún* as a scalar additive is negated via *ni* ‘nor’, whereas the outer negation of STILL, i.e. the expression of NO LONGER, is *ya no* ‘already NEG’. Aside from the clear differences in meaning, this gives further evidence for the separation of the two functions.

3 Non-temporal uses

(87) German

Context: hope accompanies man through life.

Noch [a-m]	Grab-e] _{FOC}	<i>pflanz-t er</i>
still	at-ART.DEF:DAT.SG.N	grave(N)-DAT plant-3SG 3SG.M
<i>die</i>	<i>Hoffnung auf.</i>	
	ART.DEF:ACC.SG.F	hope(F) up
		‘Even/as late as at his grave, he plants hope.’

(Schiller, *Hoffnung*, glosses added)

In **PersohnSchonNoch** I argue that instances like (87) constitute the source for *noch* as a BEYOND operator in cases like (81), repeated in condensed form in (88). The additional peculiarities of *noch* as a scalar additive that I described above (a scalar model of sufficiency and the requirement for a negatively defined scale) find a motivated explanation in the simultaneous evocation of the marginality use of *noch*. To briefly recapitulate from Section 3.2, the marginality functions addresses the question of whether a specific entity included within the bounds of some scale or category (hence the model of sufficiency) and brings along an antonymic ordering relationship (degrees of *implausiblity*, *decentrality*, etc.).

(88) German

Context: they talk themselves into believing

<i>dass</i>	noch [der]	dümmst-e	Tweet] _{FOC}
COMP	still	ART.DEF:NOM.SG.M	stupid.SUP-NOM.SG.M tweet(M)
<i>die</i>		<i>Wahrheit</i>	<i>sprech-e.</i>
	ART.DEF:NOM.SG.M	truth(F)	speak-SBJV.3SG
			‘that even the most stupid tweet speaks the truth.’

Lastly, an even more indirect relationship to phasal polarity STILL can be established for the one BENEATH operator in Table 3.3, the complex Spanish item *aunque sea*. This collocation was seen in (80) above. Example (89) is another illustration.

(89) Spanish

<i>Da-me</i>	una	galleta, aun-que	sea,
give.IMP-OBJ.1SG	ART.INDEF:SG.F	cookie(F)	still-SUBORD COP.SBJV.3SG
<i>que</i>	<i>ten-go</i>	<i>hambre.</i>	
SUBORD	have-1SG	hunger	
			‘Give me so much as a cookie, I’m hungry.’

(RAEGramatica, glosses added)

3.3 Additive and related functions

The composition of *aunque sea* instantiates a productive pattern of marking the protasis of concessive conditionals ‘even if’. This pattern, in turn, builds on *aún* in its scalar additive use. With that in mind, *GastvanderAuwera2011* suggests that *aunque sea* started out as a parenthetically inserted protasis with the literal meaning of ‘even if it were’, followed by the deletion of a first pronominal occurrence of the focus. This scenario is illustrated in (90). It finds support in the fact that, at least in European Spanish, *aunque sea* often follows its focus and is prosodically set off from it (*RAEGramatica*), as is the case in (89).

(90) Spanish

- Si dices algo, aun-que sea una palabra,*
 if say.2SG something still-SUBORD COP.SBJV.3SG ART.INDEF:SG.F word(F)
v-as a ten-er problema-s.
 go-2SG to have-INF problem-PL
 ‘If you say **something**, even if it were a **word**, you’ll get into trouble.’
 (*GastvanderAuwera2011*)

3.3.5 Comparisons of inequality

Introduction In this subsection, I address uses pertaining to the modification of comparisons of inequality. The example in (91) is an illustration. Here German *noch* contributes the scalar additive notion of ‘even’ to the comparison, the latter being signalled by the comparative form of the adjective *größer* ‘bigger’.

(91) German

- Adam ist größer als Chris. Aber Berta ist noch größer als Adam.*
 A. cop.3SG big.CMPR than C. but B. cop.3SG still big.CMPR
 than A.
 ‘Adam is taller than Chris. But Berta is **even taller** (than Adam).’
 (*Umbach2009*, glosses added).

In (91) the STILL expression serves to relate the comparison in its host clause to the one expressed in the preceding clause. In (92), on the other hand, Northern Qiang *tce-* serves as an intensifier, marking a particularly high degree of difference between the third person standard and the first person comparee.

(92) Northern Qiang

- Qa the:-s tce-fia.*
 1SG 3SG-than still-white:1SG
 ‘I am lighter (in color) than him (a lot lighter).’

3 Non-temporal uses

(LaPollaHuang2003)

Distribution in the sample Table 3.4 lists the expressions in my sample that have uses related to the modification of comparisons of inequality. In addition, Table 3.4 indicates the type of contribution each expression makes in these constructions.¹⁵ As can be gathered, the relevant functions are attested for 17 items from 15 languages, and the distribution is strikingly biased towards the Eurasian macro-area. What is more, such uses are attested for 13 out of 16 Eurasian sample languages.¹⁶ Even with the limitations of the sample data in mind, this strongly points to a primarily areal phenomenon. In line with this geographic distribution, comparative functions are primarily found with independent grammatical words. As for the type of contribution, the scalar additive ‘even more’ type clearly predominates, with the intensifying ‘much more’ type being found with only sample expression, which is Northern Qiang *tce*-.

In what follows, I examine the two types of uses separately.

A closer look: ‘even more’ I now turn to a closer look at STILL as ‘even more’. This type is illustrated in (91), repeated below. Here, German *noch* serves to relate the comparison made in its host clause to the one expressed in the preceding clause, and it signals that the former yields a more informative proposition (that the comparee has a higher degree of the property in question).

(91) German

Adam ist größer als Chris. Aber Berta ist noch größer
 A. COP.3SG big.CMPR than C. but B. COP.3SG still big.CMPR
 (*als Adam*).
 than A.

‘Adam is taller than Chris. But Berta is even taller (than Adam).’

(Umbach2009, glosses added).

Whereas in (91) the second comparison is overtly manifest in the immediate discourse context, it is often left implied, as in (93, 94). Example (, (94) also illustrates another point: the use in question is not restricted to comparative construc-

¹⁵In addition, Classical Nahuatl *oc* is commonly found in collocations like *oc achi* ‘still a bit > another bit’ to overtly mark the comparative degree (Appendix E.1.1.6.2).

¹⁶This use is also found with several cognates of my sample expressions, such as Dutch *nog* (e.g. Vandeweghe1984), Italian *ancora* (e.g. Tovena1994; Vegnaduzzo2000), or cognates of Serbian-Croatian-Bosnian *još* across Slavic (e.g. SSJC; CYM11; SSKJ; KSS4; PWN). It is also found, among other markers, with Hungarian *még* (CsirmazSlade2020).

ART.DEF:ACC.SG.N result(N) still up fantastic-ACC.PL 9.9 percent

‘An old episode ... improved the result even further, to a fantastic 9.9 percent.’ (found online, glosses added)

On a more fine-grained level, several of the items in Table 3.4 are worth a

3 Non-temporal uses

brief discussion. Thus, English *still* in comparisons of inequality is far less frequent than *even*. According to **Ranger2018**, *still* is primarily found in discourse contexts that feature an incremental build-up and an implied standard, a prototypical instance being (95). This is reminiscent of how additive *still* is restricted to list environments (Appendix D.1.1.5.1).

(95) English

For example, we would expect to find a very high proportion of cognate words in British and American English but a much lower percentage if we compare English and German and still lower if we compare English and Russian.
(BCN, cited in **Ranger2018**)

In a related fashion, in the case of French *toujours* (which is a borderline case of a **STILL** expression and perhaps best treated as a marker of stasis), temporal notions persist. Thus, as **MosegaardHansen2008** observes, the felicitous use of *toujours* in comparisons requires that at least one prior change along the scale in question has been observed. In other words, the implied standard of comparison in an example like (96) cannot be a different entity at the same point in time.

(96) French

Elle me regardait avec toujours plus d'-inquiétude.
3SG.F 1SG.OBJ look.PST.IPFV.3SG with still more of-concern
'She looked at me with **ever more disquiet**'
(**MosegaardHansen2008**, glosses added)

With Thai *yaŋ*, there appears to be a preference for predicates denoting the lower end of a scale (Chingduang Yurayong, p.c.). This is reflected by the relevant examples in the literature featuring items like *cha* 'slow' in (97), or *naaw* 'cold'.

(97) Thai

Phōm wīŋ cháa lēew (tèε) kháu yaŋ cháa kwàa phōm iik.
1SG run slow already but 3 still slow exceed 1SG more
'I run slowly, but he runs even more slowly than I do'
(**HigbieThinsan2002**, glosses added)

Lastly, with German *noch* and Spanish *aún* and *todavía*, the use in comparisons of inequality, together with a 'more' expression has given rise to a discourse connective 'what is more' (Section 3.3.7.2). This is illustrated in (98) for Spanish *todavía plus más*.

3.3 Additive and related functions

- (98) Spanish

Según Pessoa, lo que caracteriza al genio literario es la inadaptación a su medio.

‘According to Pessoa, what characterizes literary genius is its nonconformity with its medium.’

Más todavía: la fama literari-a de hoy excluy-e
more still ART.DEF:SG.F fame(F) literary-F of today exclude-3SG

el éxito en el porvenir ...

ART.DEF:SG.M success(M) in ART.DEF:SG.M future(M)...

‘What is more: today’s literary fame impedes future success.’

(CORPES XXI, glosses added)

In syntactic terms, many of the expressions in Table 3.4 are phrasal sisters to the degree predicate, as is characteristic of focus-sensitive operators. For instance, in (99) it can be observed that English *still* intervenes between the indefinite article and the following noun phrase. Similarly, in (100) French *encore* immediately precedes *mieux* ‘better’, rather than occurring in its usual post-auxiliary position. Similar cases are attested for German *noch*, French *toujours*, Serbian-Croatian-Bosnian *još*, Spanish *aún* and *todavía*, and Southern Yukaghir *ajī/āj*. It is conceivable that upon examination of more data this list becomes even longer.

- (99) English

A still greater offer came from the Dean. (Ippolito2007)

- (100) French

Le premier roman de Duschnock a eu

vendu encore mieux.

sell.PTCP.SG.M still better

‘Duschnock’s first novel was a great success. The second one sold even better.’ (MosegaardHansen2008, glosses added)

Modern Hebrew differs slightly, in that it is the degree modifier that forms a constituent with the STILL expression *fod*, as can be seen in (101), where they move through the clause together.

3 Non-temporal uses

- (101) Modern Hebrew

Ze **fod yoter** *meguḥax*. / Ze *meguḥax* **fod yoter**.
 PROX.SG.M still more ridiculous PROX.SG.M ridiculous still more
 'This is even more ridiculous' (Glinert1976)

Discussion: 'even more' There is an obvious metonymic relationship between phasal polarity STILL and the 'even more' use in comparisons of inequality, as observed before me by **MosegaardHansen2008**, **JingSchmidtGries2009**, **Ranger2018** and **Shetter1966**, among others. Thus, STILL presupposes that a situation not only obtains at topic time, but has progressed beyond its onset. Similarly, the 'even more' use triggers the presupposition that comparee has some degree of the property in question (as compared to the relevant norm or a contextually retrievable standard of comparison) and that, as a function of the comparison, this degree exceeds that of another entity. Figure 3.4 is a schematic illustration of these parallels.

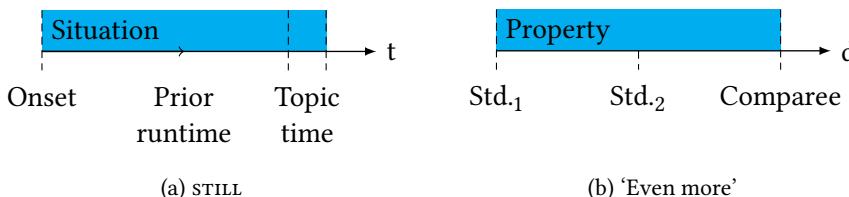

Figure 3.4: Schematic comparison of STILL and comparative 'even more'

In terms of the function's emergence, the vast majority of expressions in Table 3.4 have other additive uses that can be said to motivate their use in comparisons of inequality. However, this is not universally the case, the clearest exception being French *toujours*. What is more, additive functions are far from necessary for the 'even more' use to arise. To begin with, phasal polarity STILL and the use in question are virtually indistinguishable in cases like (102, 103), as observed by authors such as **Bosque2016**, **MosegaardHansen2008** and **VictorriFuchs1996**, among others. Thus, in (102, 103), the STILL expressions *encore* and *todavía* take scope over a verbal predicate that denotes a gradual change along a scale. As the phasal polarity use presupposes a prior runtime of the same situation, and therefore a previous advancement on the relevant scale, this unavoidably yields a dual comparison. In other words, such combinations make for a perfect bridge from STILL to 'even more'.

3.3 Additive and related functions

(102) French

 COP.3SG very tall-F but still grow-FUT.3SG
 i. 'She's very tall, but she'll grow even more.'
 ii. 'She's very tall, but she'll still be growing.'
 (Bosque2016, glosses added)

Another, and somewhat related, bridging context can be found in an instance like (104). Under an etymologically more conservative reading, this example features a persistent intent to advance a process. As a function of the comparative adjective *plus* 'more', the latter is depicted as having already yielded an advanced degree on some scale. As in (102, 103), the sum of these elements entails the notion of 'even more'.

(104) Old French, 13th century

Sire, dist il, vostre merci. // A ceste damoisele ci // Vous pri c'ox pardounés vostre ire; //
 'Sire, he says, Your Grace. I ask you that you will renounce on your anger
 against this maiden.'
Et si vous veul encor plus dire,
 and indeed 2PL.OBJ want.1SG still more say.INF
 'And, indeed, I still want to say something more/want to say even
 more.' (L' Atre périlleux, cited in MosegaardHansen2008, glosses added)

Lastly, a link of the more indirect kind can be established for French *toujours* and English *still*. *Toujours*, aside from being a marker of persistence, also has a diachronically earlier 'always' use. As MosegaardHansen2008 discusses, the 'even more' use can be traced back to the 'always' function. Thus, some of the

3 Non-temporal uses

earliest relevant attestations, like the one in (105) are compatible with both readings. The same case can be made for English *still*, which also once possessed an ‘always’ sense. According to Lewis2019, the example in (106), which features both distributivity (i.e. the recurrence of a similar situation across multiple times) and the comparative degree of an adjective, constitutes the first relevant attestation.

- (105) Middle French, 17th century

Mais si l' esperance est esteinte, // pourquoy desir , t' efforces-tu // de faire une plus grande atteinte? // C'est que tu nays de la vertu, //

 MosegaardHansen2008, glosses added)

- (106) Early Modern English, 16th century

spoonefull by spoonefull: bitterer and bitterer still (Lewis2019)

A closer look and discussion: ‘much more’ Unlike the majority of expressions in Table 3.4, Northern Qiang *tce-* can signal a high degree of difference between the comparee and the standard of comparison. Example (92), repeated below, is an illustration.

- (92) Northern Qiang

Qa the:-s tce-fia.
 1SG 3SG-than still-white:1SG

‘I am lighter (in color) than him (a lot lighter).’

(LaPollaHuang2003)

Whether *tce-* can also have the ‘even more’ use is less clear. It is possible that in (107) such a reading is a contextual inference, due to the property in question being predicated of the standard of comparison in the preceding clause.

3.3 Additive and related functions

- (107) Northern Qiang

Pəs məpa wa, təp-ni tsə-s tce-məpa: lu.
 today cold very tomorrow-ADV this-than still-cold.PROSP will

‘Today is very cold; tomorrow is going to be even colder than this.’

(LaPollaHuang2003)

In addition, *tce-* is strikingly similar to the superlative marker *tci-*, which furthermore occupies the same position in the predicate. This suggests some etymological relationship between the two items. The one synchronic formal difference is that the superlative prefix, illustrated in (108), does not undergo vowel harmony.

- (108) Northern Qiang

tci-χtsa

most-small

‘smallest’ (LaPollaHuang2003)

Whereas the ‘even more’ use examined above involves a metonymic projection from temporal intervals to degrees, in the use I discuss here the parallels to phasal polarity pertain to the differential function. In other words, the ‘much more’ use signals that the difference between the comparee and the standard goes beyond the minimum necessary for faithfully using the comparative construction, similar to how phasal polarity STILL contributes the presupposition that the situation depicted in the clause has progressed beyond its onset. These similarities are schematized in Figure 3.5.

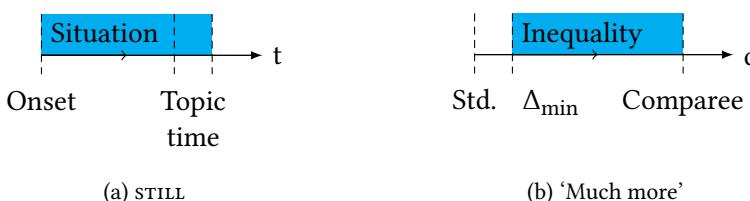

Figure 3.5: Schematic comparison of STILL and comparative ‘much more’

3.3.6 Constituent coordination

Introduction Two expressions in my sample have uses as constituent coordinators. These are Ket *hāj* and Mandarin Chinese *hái* (Appendices D.7.1.4.4, D.9.1.7.4). In what follows, I briefly illustrate and discuss each of the two items separately.

3 Non-temporal uses

A closer look and discussion: Ket *hāj* The Ket expression *hāj* serves as a conjunctive coordinator and is attested as linking constituents of various types. This is illustrated for a pair of attributive adjectives in (109a), and for two clauses in (109b). As pointed out by Nefedov2015, the coordinative function of *hāj* is clearly a diachronic extension of *hāj* in additive function, following the well-known path from ‘also’ to ‘and’ (see e.g. Mithun1988).

(109) Ket

- a. *Hāna haj qē-ŋ̥ dil̥gat šk̥ola-di-ŋ̥a ɔŋ̥-ɔ-tn̥*
small still big-PL children school-N-DAT SUBJ.3PL-PRS-go

- b. Context: two brothers are being served fatty meat by a witch.
Érūla ánùnturu bū òn̥ ̄s bān dbil[a].
'Erula was smart and didn't eat much of the meat.'
A Tútà-da-ŋ̥a ánùn̥ bənsàŋ̥ bū ̄sqàl-s óvilde haj
but T.-M-DAT mind not.be.PRS 3SG.M greedy-NOM was still
bildè ba d-b-̄l-[a].
everything customarily SUBJ.3M-OBJ.3N-PST-eat
'But Tuta was stupid. He was greedy and would always eat it all up.'
(Vajda2004)

A closer look and discussion: Mandarin Chinese *hái-shì* Unlike Ket *hāj*, Mandarin Chinese *hái* signals disjunctive coordination, normally in collocation with copula *shì*. Example (110) is an illustration. As in this example, this function is predominantly found in interrogatives.

(110) Mandarin Chinese

- Nǐ zuì xǐhuān lüchá hái-shì huāchá?*
2SG most like green_tea still-COP jasmine_tea
'Tu préfères le thé vert ou bien le thé au jasmin? [Do you prefer green tea or Jasmine tea?]' (Donazzan2008)

Lu2019 suggests that the disjunctive function of *hái-shì* goes back to the additive function of *hái* and a sentence pattern [[p] [*hái* [*shì* q]]]. In this pattern, copula *shì* originally served as a predicator, and the disjunctive reading started out as a contextual inference from ‘*p*, in addition *q*’. The conventionalization of

3.3 Additive and related functions

this inference was accompanied by a structural reanalysis to [[p] [háishi q]]. According to **Wiedenhof2015**, in very informal registers *shì* can get dropped; see (111). Given its limited diastratic distribution, this likely constitutes a subsequent innovation.

- (111) Mandarin Chinese

Nǐ de hái wǒ de?

1SG ASSOC still 2SG ASSOC

‘Mine or yours?’ (Wiedenhof2015, glosses added)

3.3.7 Conjunctional adverb

In this subsection I turn to uses of STILL expressions and collocations containing them as conjunctional adverbs. I first turn to a more general type of conjunctional use (Section 3.3.7.1) and then address the more specific case of argumentative ‘what is more’ collocations (Section 3.3.7.2). Note that I discuss the somewhat related type of ‘And how!’ collocations separately in the context of exclamative functions (Section 3.5.6.1).

3.3.7.1 General conjunctional adverb

Introduction Example (112) illustrates the use of Udihe *xai(si)* as a conjunctional adverb ‘and (then)’.

- (112) Udihe

Si [si] jeu=de jai-ni ede-ili tuŋči; xai geje dieli-zeŋe-fi [geje dieli-zeŋe-fi].

2SG 2SG what=FOC noise-3SG start-3SG jump_on.IMP still together

fly-FUT-1PL together fly-FUT-1PL

‘If some noise starts, jump on me and we’ll fly together’

(NikolaevaEtAl2019)

This conjunctional use differs from coordinative function with clausal scope that I discuss in Section 3.3.6, in that “it does not establish a syntactic relationship of clauses as equal parts of another constituent, the complex sentence.” (Forker2016).

Distribution in the sample Table 3.5 lists the four expression in my sample that have a general conjunctional function. As can be gathered, this use is primarily found in Eurasia. Two of the four cases involve fixed collocation, and in one of these two instances the collocate itself is a connective ‘then, after’.

3 Non-temporal uses

Table 3.5: Conjunctional adverb use

Macro-area	Language	Expr.	Collocate	Appendix
Eurasia	Hebrew (Modern)	<i>fod</i>	n/a	D.4.2.7.4
	Mandarin Chinese	<i>hái</i>	<i>yǒu</i>	‘EXIST’ D.9.1.7.3
	Udihe	<i>xai(si)</i>	n/a	D.16.1.5.4
South America	Southern Lengua	<i>makham</i>	<i>natamén</i>	‘then’ G.5.1.5.2

A closer look I now turn to a closer look at the use of **STILL** expressions as conjunctional adverbs. In Modern Hebrew, this use of *fod*, illustrated in (113), has been described as being characteristic of more formal registers.

(113) Modern Hebrew

fod moser katav-enu ki...
still report.3SG.M reporter-POSS.1PL COMP

‘Our reporter further reports that..’ (Glinert1989, glosses added)

Udihe *xai(si)*, illustrated as a conjunctional adverb in (112) above, is also repeatedly attested in what appears to be the notionally very close function of a specification marker ‘that is to say, namely’ (Appendix D.16.1.5.5). This is illustrated in (114).

(114) Udihe

Context: a hero has shot at an iron bird.

Tada-ni=dele piktige yen'e, xai zokpo-ni culi=de.
arrow-POSS.3SG=FOC right go.PFV still throat-POSS.3SG directly=FOC
‘The arrow had struck it exactly, [that is] straight into the throat.’
(NikolaevaEtAl2019)

Turning to the cases that involve fixed collocations, Mandarin Chinese *hái* has the conjunctional function in collocation with existential *yǒu*; see (115a). This collocation is also very common with *hái* in plain additive use, as illustrated in (115b).

(115) Mandarin Chinese

- a. *Rùzhù qián yào fù yājīn. Hái yǒu, bù néng dài chōngwù.*
check_in before should pay deposit still EXIST NEG able carry pet
‘You need to pay the deposit before using the room. **Also**, you’re not

3.3 Additive and related functions

- allowed to have pets here.' (found online, glosses added)
- b. *Qù Lúndūn, Bálí, hái yǒu Luómǎ.*
go London Bali still EXIST Rome
'We are going to London, Bali, and Rome as well.'
(Wiedenhof2015, glosses added)

Lastly, with Southern Lengua *makham*, the relevant function is found in combination with *natamén* 'then, after'. John Elliot (p.c.) reports that this is particularly common if the following clauses also contains *makham*, as in (116).

- (116) Southern Lengua
- Natamén makham ap-tamh-aha makham Kennaqte*
then still M-work-go_around.DECL still K.
Appeywa Tásek Amya'a.
A. good story
'Then later, Kennaqte Appeywa spoke again from the Bible.'
(John Elliot, p.c.)

Discussion The conjunctional function just described clearly goes back to additive uses of the same expressions, rather than being directly related to phasal polarity **STILL**. Not only is an additive function attested for all expressions in Table 3.5, but such an extension is common of additive markers in general (Forker2016). Example (117) is an illustration featuring Turkish (not in my sample) =*de*.

- (117) Turkish
- Context: we will buy armchairs.
- On-lar-a çiçek-li basma örtü-ler dik-er-im ben. Bir=de*
3-PL-DAT flower-ADJ print cover-PL sew-AOR-1SG 1SG one=also
kabul gün-ümüz ol-ur.
admission day-POSS.1PL be(come)-AOR
'I will make covers for them in floral print. And we will have an "at home day"' (Kerslake1996)

Additional support for this interpretation comes from the fact that in Mandarin Chinese the conjunctional use occurs in the collocation *hái yǒu*, which is a common occurrence with *hái* as 'also'. In semasiological terms, this development constitutes a fairly straightforward instantiation of the tendency for meanings to become increasingly procedural (Section 1.6.2).

3 Non-temporal uses

3.3.7.2 ‘What is more’

Introduction In this subsection, I briefly turn to collocations that involve **STILL** expressions and which serve as clause-initial, argumentative connectives ‘what is more’. Examples (118, 119) are illustrations.

(118) Spanish

En La Habana hay también gente pobre. Más aún, hay en ART:DEF:SG.F H.(F) EXIST also people poor more still EXIST esclavo-s.
slave-PL

‘There are also poor people in Havana. **What is more**, there are slaves.’
(CORPES XXI, glosses added)

(119) Modern Hebrew

Hay-ta te’una, ma fod še-ha-nehag-im
COP.PST-3SG.F accident(F) what still SUBORD-ART.DEF-driver-PL.M
šavt-u.
strike.PST-3PL

‘There was an accident, **what’s more**, the drivers were striking.’
(Glinert 1989, glosses added)

Distribution and types Table 3.6 lists the attested ‘what is more’ collocations in my sample. As can be gathered, they are attested for four expressions from three languages, all stemming from western Eurasia. In Spanish and German, these collocations involve **STILL** expressions together with a quantifier ‘more’, as in (118). The Modern Hebrew case, on the other hand, features a WH-element ‘what’; see (119) above.

Table 3.6: Connective collocations ‘what is more’

Macro-area	Language	Expression	Collocation	Appendix
Eurasia	German	<i>noch</i>	<i>mehr noch</i> ‘still more’	D.3.1.7.4
	Hebrew (Modern)	<i>fod</i>	<i>ma fod</i> ‘what still’	D.4.2.7.5
	Spanish	<i>aún</i>	<i>aún más / más aún</i> ‘still more / more still’	D.13.1.7.5
		<i>todavía</i>	<i>todavía más / más todavía</i> ‘still more / more still’	D.13.2.8.3

3.3 Additive and related functions

Discussion In terms of their motivation and origins, all collocations in Table 3.6 are fairly transparent. The German and Spanish cases, which involve a comparative ‘more’ marker are clearly based on the respective collocations in comparison of inequality ‘even more’ (Section 3.3.5). In the case of Hebrew *ma fod*, on the other hand, it is the STILL expression *fod* itself that contributes the quantificational notion (Section 3.3.1). That is, despite superficial differences, *ma od* is no different from English *what is more*. What both types have in common is that they involve additivity of some sort and a straightforward transfer from the propositional to the textual domain.

3.3.8 A brief reflection on additive and related uses

In a ground-laying typological study, **Forker2016** examines the functional range of additive markers and the implicational relationships between their individual uses. Comparing her findings to those from my sample reveals some striking areas of divergence, even with the limitations of the data in mind. Thus, whereas around four out of five additive markers examined by **Forker2016** can also serve as scalar additives, in my sample this is the case for only roughly one out of seven items. A similar discrepancy obtains for the constituent coordination function. Likewise, the use of an additive expression as a conjunctival adverb use is about twice as frequent in **Forker2016**’s sample as compared to mine; see Table 3.7.

Table 3.7: Relative frequency of additive-related functions compared to **Forker2016**’s (**Forker2016**) findings.

Function	Forker	My sample
Scalar additive	81%	14%
Constituent coordination	60%	7%
Conjunctival adverb*	29%	14%

* Excluding ‘what is more’

What is more ,nearly two thirds of the additive expressions in **Forker2016**’s (**Forker2016**) are also used as switch topic markers, This function is illustrated in (120), where Ale-Gawwada (Afro-Asiatic > Cushitic) =*kka* marks the reintroduction of Lion as the story’s protagonist.

(120) Ale-Gawwada

Context: Lion had summoned all animals.

3 Non-temporal uses

Ye=okaay-ú=ppa / **[*karma-o*]_{FOC}** = ***kka*** *sa'a-k-o* *kat-a*
 NEG.3=come-PFV.NEG.3=LNK lion-M=also heart-SG-M down-out
 ?i=?"assap-ad-i....
 DEF=think-MID-PFV.3.M
 '(The Monkey only) did not come; therefore, **the Lion** thought in his
 heart...' (Tosco2010)

The only marker in my sample for which there are some indications of a topic-related use is Udihe *xai(si)* (Appendix D.16.1.5.3). Example (121) is an illustration. Here, *xai(si)* appears to emphasize the switch from the tiger's role in culture to a description of its outward appearance. That said, *xai(si)* is a very frequent item in texts, and its individual contribution in each attestation is far from fully understood. Furthermore, according to Forker2016, there is an implicational relationship between the switch topic function and the use of the same items as conjunctival adverbs, in that all expressions that have the latter use also have the former. This is clearly not the case in my sample.

(121) Udihe

Context: about tigers. They are considered to be God's animal.
Ute bi; *iŋakta-na-ni* *xaisi oño-ni*,
 this COP:PRS.PTCP fur-DESIGNATIVE-POSS.3SG still draw.PST-3SG
kegdeje-ni iŋakta-na-ni *bagdi:-ni zülie-li*.
 striped-3SG fur-DESIGNATIVE-POSS.3SG grow-3SG striped-ADJ
 'That's how it is. Its fur all grows motley and stripy.'
 (NikolaevaEtAl2019)¹⁷

All these points suggest that STILL expressions as additive markers develop along very different lines from run-of-the-mill additives. I can only speculate at this point, but it seems plausible that, at least to some extent, these differences are a function of the differences in discourse patterns that I discuss in Section 3.3.1.

3.3.9 Other functions adjacent to additivity

In this subsection, I briefly turn to two uses that are loosely related to additivity in that they involve the inclusion of other entities. More specifically, I address Classical Nahuatl *oc* as 'other, different one' and Kekchí *toj* as spatial 'until'.

¹⁷See NikolaevaTolskaya2001 on the "designative" or "destinative" case marker *-na*.

3.3 Additive and related functions

Classical Nahuatl *oc* as ‘other, different’ Example (122) illustrates Classical Nahuatl *oc* in combination with a quantifier, together referring to a different entity of the same type as a contextually given one (Appendix E.1.1.6.3).

- (122) Classical Nahuatl

Huel oc cen-tlamantli in ic ni-c-mati-ya
 INTENS still one-thing DET thus SUBJ.1SG-OBJ.3SG-know-PST.IPFV
in mo-tēnyo.
 DET POSS.2SG-fame.POSS

‘Tout autre est l’opinion que j’avais de ta renommée. [Quite a different one is the opinion I had of your reputation]’
 (Launey1986, glosses added)

Oc also has a use as an additive marker, and in this function it can combine with a quantifier phrase to signal the addition of a different entity of the same kind, as illustrated in (123).

- (123) *Is-ka’ iwaan ok sen-tlamantli.*
 here-PRED and still one-thing
 ‘And here is yet another thing.’ (Langacker1977)

As observed before me by Launey1986, there is an obvious similarity between *oc* in examples like (123) and the use I discuss here, a proximity that is also reflected in items like English *another* Spanish *otro*. The two functions are especially close in cases like (124), which involves additivity as well as choice from an established set in the form of commonly agreed-upon mortal sins. Such examples likely constitute a bridging context from additivity to alterativity, the link to phasal polarity thus being an indirect one.

- (124) Classical Nahuatl

Monequi anquítōzquè in quēzquipa ōantlāhuānquè, in quēzqui-pa ō anquít-lacòquè in īmissātzin Totēcuiyo

‘Que digais quantas vezes os ueis emborrachado, quantas ueis dexado de oyr Missa, [You must say how many times you got drunk, how many times you failed to go to mess]’

çācè quēcīzqui-pa in ō ī-pan
 finally how_many_each-time DET AUG POSS.3SG-top
an-huetz-què in oc-cequi tē-mictiā-ni

3 Non-temporal uses

tlàtlacōlli.

sin

‘y finalmente quantas vezes aueis caido en otroc pecados mortales [and how many times you have fallen into **other mortal sins**]’
(Carochi1645, glosses added)

Kekchí *toj* as spatial ‘until’ Example (125) illustrates Kekchí *toj* as ‘until’ together with a spatial complement (Appendix E.5.1.5.1).

- (125) Kekchi

A: *B'ar naxik li manguera?*
'Where does the hose go?'

B: *Ay ink'a' na-in-naw, mare arin toj najt*
INTERJ NEG PRS-3SG.P-1SG.A-know perhaps here still far
chi-r-ix li tzuul.
PREP-POSS.3SG-back DET mountain
'Ay, I don't know, perhaps (from) here until far over the hill
(Kockelman2020)

The same ‘until’ reading of *toj* is also available with temporal complements (Section 2.5.2.1), as illustrated in (126). It is safe to assume that this latter use, in conjunction with temporal zero anaphora, also constitutes the source of *toj* as an exponent of STILL and thereby the link between the spatial limitative use and phasal polarity STILL.

- (126) Kekchí
Chalen sa' x-kach'inal toj anaqwan maa-jun-wa
from PREP POSS.3-youth until today NEG-one-time
x-kala.
PFV-3.get_drunk
'From his youth until today, not once has he gotten drunk.
(EachusCarlson1980, glosses by Kockelman2020)

3.4 Restrictive

3.4.1 Introduction

In this section, I discuss restrictive uses of **STILL** expressions. As layed out in Section 1.6.4, I understand restrictive operators as denoting negative quantification

3.4 *Restrictive*

over a set of context propositions that differ from the text proposition in the denotation of the focus. Their quantificational force may be existential, in which case I speak of *exclusive* operators, or universal. The latter I term *at least*-type restrictives. As a second parameter of variation, restrictive operators may or may not require the alternative denotations to form an ordered set (a scale).

In what follows, I first discuss cases in which a **STILL** expression serves as a non-scalar exclusive operator, which is a coexpression pattern primarily found in the Australian and Papunesian macro-areas (Section 3.4.2). I then turn to a use that combines temporal inclusion with the exclusion of context propositions ‘thus far only’, again without the requirement for scalar alternatives. Lastly, in Section 3.4.4 I discuss scalar restrictive uses. Note that I do not discuss a specifically temporal restrictive function ‘no earlier than’ here. For examinations of the latter use, see Section 2.5.2.1.

3.4.2 Non-scalar exclusive

Introduction The examples in (127) illustrate the colexification of phasal polarity **STILL** and a non-scalar exclusive function for Kewa *pa*. Thus, in (127a) this expression signals the persistence of the boy’s breastfeeding, whereas in (127b) it serves to exclude all alternatives to the proposition ‘I stay’.

(127) Kewa

- a. *Go naaki-ri adu pa na la-aya.*
DEM boy-TOP breast still eat stand-PRS:3SG
‘That boy is still breast-fed (lit. still eats breast).’
(Franklin2007, glosses added)
- b. *Pa piru aa-lua koe le sa pi.*
still stay stand.DUR-FUT:1SG bad thing put sit.PRS:1SG
‘(If) I don’t say something (lit. just stay) I have put something
valueless.’ (Yarapea2006)

Distribution in the sample Table 3.8 lists the markers in my sample that function as non-scalar exclusives. The sample data suggest that **STILL**-exclusive co-expression is a widespread phenomenon in Australia and Paponesia.¹⁸ As can be gathered from Table 3.8, outside of these two Macro-areas, it appears to be

¹⁸An additional Australian candidate from outside the sample is Jaru/Wanyirra (Pama-Nyungan) *=lu* (Senge2015; Tsunoda1981). In another Pama-Nyungan language, Eastern Arrernte, *ant-eye* ‘still’ is formally related to restrictive *ante* (Wilkins1989). Some further candidates in Paponesia include *kəp* in the Ndu language Manambu (Aikhenvald2008), and *nawe* in the

3 Non-temporal uses

rare; the only exception in my sample is *=vi* in the Bantu language Chuwabu. That said, it is possible that sampling bias plays some role. Thus, several of the sample languages were included due to them being mentioned in **vanBaar1991** (**vanBaar1991**, **vanBaar1997**) and **SchultzeBerndt2002**, whose discussions focus on Australia and Papunesia. In terms of their wordhood, markers serving as both **STILL** and non-scalar exclusives are attested as bound morphemes (clitics or suffixes), and as independent grammatical words, suggesting no correlation between morphosyntactic status and function. Lastly, note that other **STILL** expressions may go together with an exclusive marker. Thus, Ewe *ga-* is often combined with exclusive *ko* or its reduplicate *kookooko*. Similarly Wardaman *gayawun* frequently goes together with *-bi*, a marker that can be analysed as exclusive (see **SchultzeBerndt2002**).

Table 3.8: Coexpression of exclusive ‘only’

Macro-Area	Language	Expression	Appendix
Africa	Chuwabu	<i>=vi</i>	B.5.1.4.1
Australia	Gooniyandi	<i>=nyali</i>	C.1.1.4.1
	Gurindji	<i>=rni</i>	C.2.1.6.1
	Kayardild	<i>=(i)da</i>	C.4.1.4.1
	Martuthunira	<i>waruu(l)</i>	C.5.1.4.1
	Wubuy	<i>-wugij</i>	C.7.1.4.1
	Acehnese	<i>mantöng</i>	F.1.1.4.1
Papunesia	Chamorro	<i>ha'</i>	F.4.1.4.1
	Kewa	<i>pa</i>	F.8.1.3.1
	Komnzo	<i>komnzo</i>	F.9.1.4.1
	Ma Manda	<i>-güt</i>	F.11.1.3.1
	Rapanui	<i>nō</i>	F.15.1.4.1

A closer look I now turn to a closer examination of the coexpression of **STILL** and ‘only’. To begin with, the operators under discussion here do not require a ranking of the alternatives under consideration. This, however, does not prevent them from combining with scalar expressions and/or contexts evoking a scale. For instance, in (128) the asserted event ‘she fainted’ can be understood as lying lower on a contextually evoked scale of affectedness than the negated proposition ‘she died/is dead’ contained in the immediately preceding clause.

Sepik language Mehek (**Hatfield2016**). Austronesian candidates from Papunesia include *nanga* in Nalik (**Volker1994**), *=te* in Pohnpeian (**Rehg1981**), and *boko* in Tolai (examples throughout **Mosel1984**).

3.4 *Restrictive*

- (128) Rapa Nui

'Ina a Tiare kai mate; ko rerehu nō 'ā.
 NEG ART T. NEG.PFV die ANT faint still/only CONT
 'Tiare was not dead; she had just fainted.' (Kieviet2017)

Although I discuss all expressions in Table 3.8 under a single heading, in many instances the exclusive function can be understood as forming a cluster of conceptually related uses. For instance, Kewa *pa* in (129) serves to depict the pig's eating of a sweet potato as requiring no effort, and Rapanui *nō* can be used to signal that an act is performed "[w]ithout further ado, without thinking, without taking other considerations into account" (Kieviet2017); see (130). With hosts other than a verbal predicate, a recurrent function is that of intensification or amplification, as in (131). For an extensive discussion of the various functions of the relevant Australian expressions, I refer the reader to SchultzeBerndt2002.

- (129) Kewa

 NEG.PFV ashamed 2SG PFV take still 2SG ACC ART grass for cook ACC
ta'a 'umu?
 POSS:2SG earth_oven
 'Weren't you ashamed, that you just took the grass to cook (as fuel) to cook your earth oven (without asking, even though the grass was mine)?' (Kieviet2017)

- (131) Gurindji

kaput=parni
 morning=still
 'early in the morning' (McConvell1983)

In some instances, the contribution of a specific expressions is ambiguous, being compatible with both, a reading of phasal polarity STILL and the exclusive function. For instance, in (132) Gooniyandi *=nyali* occurs on the locative predicate *ngirnda marlaya* 'in this hand' and, as McGregor1990 points out, the exact

3 Non-temporal uses

interpretation is dependent on the discourse context. An exclusive reading arises if the question under discussion pertains to the ‘where’ of the object being held, whereas a phasal polarity reading answers the question of whether its location has changed. A similar instance is found in the Jaminjung-Ngaliwurru example (133), where the difference between the two interpretations is subtle, at best. I return to this issue below.

(132) Gooniyandi

Mangaddi yoodgoowali *ngirnda marla-ya=nyali goorijgila.*
 NEG I:was:putting:it:down this hand-LOC=still I:hold:it
 ‘It haven’t put it down; it’s right here in my hand/still in my hand.’
 (McGregor1990)

(133) Jaminjung-Ngaliwurru

Context: from a bush trip narrative.

Tongue hanging *gugu-wu, gugu yagbali-g=gung*

 3SG-COP=1PL.EXCL.DAT

‘(His) tongue hanging out for water, (since) our water was still (back) in the camp/right in the camp.’ (Eva Schultze-Berndt, p.c.)

Gurindji has a morphological means of disambiguating the two functions. Thus, a reduplicated form *=rnirni* can only serve as an exclusive operator, never as a phasal polarity expression. This is shown in (134). With Acehnese *mantöng*, on the other hand, the distinction between the two functions is reflected in syntax. While *mantöng* as ‘only’ always stands to the right of its focus, *mantöng* in phasal polarity function can either precede or follow the predicate; see (135).

 ‘She is still sick.’ (Durie1985)

3.4 Restrictive

Discussion At first sight, it may appear strange that an exclusive function and phasal polarity **STILL** are recurrently expressed by one and the same item. After all, in the familiar European languages, the functional extensions of **STILL** expressions typically lie in the realm of additivity. However, recall from Section 1.4.1 that my definition of **STILL** includes the evocation of a discontinuation scenario that “figures in the discourse, and/or in the mind of the Speaker, of the Addressee, or both, as a serious alternative of the factual situation described in the sentence” (vanBaar1997). Similarly, non-scalar exclusive operators serve to exclude alternative propositions from the common ground that differ in the value of the marker’s associated constituent. When the expression’s focus is a durative situation that is depicted as ongoing and the alternative(s) under consideration amount(s) to the discontinuation of the said situation, the two functions coincide. Similar observations, albeit in slightly different terms, have been made before me by Doehler2018, McConvell1983 and SchultzeBerndt2002. This overlap becomes particularly salient in examples like (132), repeated below, or in (136). As I pointed out above, in (132) the salience of one reading over the other depends on the exact question under discussion, with both being mutually compatible. In (136) the denotation of the predicate *rä* ‘she is (alive)’ constitutes the obvious continuation of a prior state and the explicitly mentioned alternative *z kwasris mnin* ‘she burned in the fire’ amounts to its discontinuation.

- (132) Gooniyandi
Mangaddi yoodgoowali *ngirnda marla-ya=nyali goorijgila.*
 NEG I:was:putting:it:down this hand-LOC=still I:hold:it
 'It haven't put it down; it's right here in my hand / still in my hand.'
 (McGregor1990)

(136) Komnzo
 Context: as a punishment for a murder, a woman has been sentenced to
 being burned alive.
Wati nagawa yabrigwa *si=r.* ***Komnzo***
 then N. 2|3:PST.IPFV:return eye=PURP still
rä *o z* *kwa-rsir* *mni=n.*

 'Then Nagawa [the woman's husband] returned to check: was she still
 alive or did she burn in the fire?' (Doehler2018; Doehler2020)

A similar argument can be made for an example like (137), where the meaning of the predicate *giraddiri* 's/he crawls' constitutes an intermediate step in an overarching sequence, which is contrasted with a denied subsequent stage.

3 Non-temporal uses

- (137) Gooniyandi

Jiginya biddangi mangaddi wardgiri giraddir wamba=nyali.

child their not he:walks he:crawls later=still

‘Their child doesn’t walk; he still crawls.’ (McGregor1990)

The associated constituent of *=nyali* and *komnzo* in (132, 136, 137) is the main predicate. Unsurprisingly, all relevant sample expressions can modify a predicate. That said, the same functional convergence can also arise in cases where the expression’s focus is a lower constituent, as long as the resulting context propositions can be construed as yielding a new situation. For instance, in (138) Gooniyandi *=nyali* occurs on the 1SG pronoun *nganyi*, which is the patient argument of *milaana* ‘he sees me’. The sentence can nonetheless be interpreted both ways, because “in order to assert that someone is looking just at one person and not another, the event of ‘looking’ must have continued for some time” (SchultzeBerndt2002).

- (138) Gooniyandi

Nganyi=nyali milaana mangaddi ngooddoo milaa.

1SG=still he:sees:me NEG that he:sees:him

‘He’s still looking at me, not at him.’ (McGregor1990)

Sarvasy2017 gives one of the most detailed descriptions of an exclusive marker in Papunesia, namely of *=gon* in the Nuclear Trans New Guinea language Nungon. Interestingly, she observes that the exclusive function often goes along with a broadly temporal one: “*=gon* has exclusive/restrictive and/or durative semantics: it can be translated as ‘only, just,’ and also tends to indicate that the exclusivity lasts for some time.” (Sarvasy2017). While phasal polarity **STILL** does not appear to form part of the denotata of Nungon *=gon*, if a similar durative notion were found with other non-scalar exclusives of the area, it would narrow the conceptual gap between the two functions even further. This last point brings me to the question of diachronicity. In her discussion of several Australian languages, SchultzeBerndt2002 convincingly argues that the non-scalar exclusive function is older than the same markers serving as expressions for **STILL**. The exclusive function, in turn, in all likelihood goes back to the “emphatic assertion of identity” (Koenig1991). A clear case in point is Kayardild *=(i)da < niida* ‘same’ (Evans1995). The fact that a reduplicated form in Gurindji only has the exclusive function likewise points to its primacy, and it is conceivable that a similar development from non-scalar exclusive to **STILL** also accounts for at least some of the Papunesian cases. Chuwabu *=vi*, on the other hand, could be a reduced form

3.4 *Restrictive*

of the additive marker *viina* ‘also, as well’ (Guerois2021), which is also involved in the formation of NO LONGER. Possibly then, the diachronic direction for this expression runs (NO LONGER >) STILL > ‘only’.

3.4.3 Thus far only

Introduction In this subsection, I discuss a use in which a STILL expression signals a combination of temporal inclusion ‘thus far’ and negated existential quantification ‘only’. The Xhosa example (139) is an illustration. Here, the collocation of the STILL expression *sa-* and the perfective aspect inflection signals that the speaker remains in a transitory state of having eaten nothing but mango.

- (139) Xhosa
Ndi-sa-ty-e imengo.
 SUBJ.1SG-still-eat-PFV NCL9.mango
 ‘(So far) I’ve only eaten mango (e.g. out of more foods that are on offer).’
 (my field notes)

The use I discuss here differs from the STILL-exclusive coexpression addressed in Section 3.4.2 in that temporal notions are always present. It is also distinct from the use of STILL expressions in scalar contexts (Section 2.2.2) in that it does not require the set of alternatives to be ordered. For instance, example (139) presupposes no ranking of food items nor any particular order in which they would be consumed.

Distribution in the sample Table 3.9 lists the five expressions in my sample that have the ‘thus far only’ use. As can be gathered, these expressions stem from three macro-areas and come in two primary flavours. In the first type, which is found with three Bantu languages in the sample, the relevant reading arises only in collocation with the perfective aspect inflection. No such collocational restriction is found, on the other hand, with Mateq *bayu* and Culina *-kha*. In what follows, I first address the latter two items and then turn to the Bantu cases.

A closer look: Mateq *bayu* and Culina *-kha* The examples in (140, 141) illustrate Mateq *bayu* and Culina *-kha*. In both cases, the expressions signal not only the persistence of one situation, but also evoke a discontinuation in the form of a follow-up event.

3 Non-temporal uses

‘Não (está), ela ainda está tomando banho (antes de logo aparecer)’

[Is mother sleeping? – No she isn’t, she’s still bathing (before showing up after)] (Tiss2004)

As for Culina *-kha*, Tiss2004 describes its function in examples like (141) as “before something else happens, the situation in question still continues for a limited time”.¹⁹ While the descriptions by Boyer2020 and Dienst2014 make no reference to a subsequent event, they both translate the marker as ‘still’. When taken together, these descriptions give a relatively solid indication that persistence forms part of the relevant sense of *-kha*. The inclusion of Mateq *bayu* in the sample is more tentative. According to Connell2013, this expression “indicates a type of imperfective aspect. More specifically, ... an action which temporally precedes another anticipated action or event.” Connell2013 also applies the label “imperfective” to *mege* ‘still’ and *degeq* ‘constantly, keep doing’. I take this as an indication that he uses it as a synonym for persistence, an interpretation

¹⁹In the original Portuguese: “antes de algo novo acontecer, a situação em questão ainda continua por um período limitado” .

3.4 Restrictive

that is supported by his gloss ‘still.only’. This would also explain why there are two attestations in Connell2013’s grammar that feature *bayu* together with the event quantifier *sidah* ‘once’ and an anterior viewpoint; one of these examples is given in (142). As I discuss in Section 2.2.2, in a language like English this type of usage can be arrived at compositionally by a STILL expression taking scope over a restrictive operator; see (143).

- (142) Mateq
Okoq bayu sidah téq.
1SG still once this
'I've never done this before (lit. I've only done this once (i.e. now)).'
(Connell2013)

(143) English
The Seasiders have still only had one game televised this season.
(found online)

Assuming the above are adequate interpretations of the two markers, then Mateq *bayu* and Culina -*kha* constitute enriched STILL expressions which require a discontinuation scenario that corresponds to a follow-up situation.

A closer look: the Bantu cases I now turn to Ruuli *ky-* and Southern Ndebele and Xhosa *sa-*. With these expressions a ‘thus far only’ reading requires the perfective aspect inflection. This is shown in the Xhosa illustration in (139) above and in the Ruuli example (144). In (144), the addition of restrictive *ereere* appears to emphasize the restrictive reading.

- (144) Ruuli
Yee n-kyā-byāl-ire *ba-ala* *ba-ereere*
 yes SUBJ.1SG-still-give_birth_to-PFV NCL2-girl NCL2-only
 'Yes, I have so far given birth only to girls.' (MolochievaEtAl2021)

In light of the inflectional restriction, a brief excursion about the interplay between grammatical aspect and the lexical make-up of situations in Bantu is at place. A characteristic feature shared by most languages from this family is that many ongoing states are depicted via the combination of so-called “inchoative” verbs together with what is commonly referred to as the “perfective” or “perfect” inflection; see [CranePersohn2019](#) for an overview. Example (145a) illustrates this with the Xhosa verb *dana* ‘be(come) disappointed’. Crucially, in the stative reading the perfective aspect inflection is compatible with the STILL expression *sa-*, as shown in (145b).

3 Non-temporal uses

(145) Xhosa

- a. *U-Sipho u-dan-ile.*
NCL1a-S. SUBJ.NCL1-be(come)_disappointed-PFV
'Sipho is disappointed.'
- b. *U-Sipho u-sa-dan-ile*
NCL1a-S. SUBJ.NCL1-still-be(come)_disappointed-PFV
'Sipho is still disappointed.' (my field notes)

Given the central role the perfective aspect paradigms play in the depiction of stative situations, it comes at no surprise that such a construal can sometimes be coerced and/or has become idiomatic with verbs that do not *per sé* lexicalize a resultant state. For instance, Southern Ndebele *akha* 'build' allows for a stative construal as 'live, inhabit' in the perfective aspect, a collocation that is compatible with the STILL expression *sa-*; see (146).

(146) Southern Ndebele

- U-s-akh-e* *phambi kw-esi-tolo.*
SUBJ.NCL1-still-build-PFV front LOC-of.NCL9-store
'S/he is still living in front of the store (lit. ... has still built ...)'
cf. #*Usakhe indlu*. (intended: 'S/he has still built a house')
(CranePersohn2021)

Discussion: the Bantu cases Against the backdrop of the facts just laid out, CranePersohn2021 suggest that the 'thus far only' reading in Bantu also has its root in coercion. A class of predicates that readily offer themselves to this process are those that describe telic situations which form one among several steps in a series, such as laying eggs \Rightarrow brooding \Rightarrow raising chicks in (147). With these predicates, once the situation depicted in the clause culminates, the subject argument can easily be construed as being in an interim state brought about by one event and preceding a second one.

(147) Southern Ndebele

- Ikukhu i-sa-bekele.*
NCL9.chicken SUBJ.NCL9-still-lay_eggs.PFV
'The chicken has (only) laid these eggs (i.e. it has not yet started brooding).' (CranePersohn2021)

3.4 *Restrictive*

While CranePersohn2021 only deal with Southern Ndebele and Xhosa, the Ruuli example (148) suggests a convergent evolution. Here, the weaning of a child is an intermediate stage in a natural development sequence.²⁰

(148) Ruuli

Eirai budi ni-ba-ky-a-li ku-leeta
 in_the_past previously when-SUBJ.NCL2-still-COP NCL15(INF)-bring
bi-ni eby-a nasare, aka-ana
 NCL8-PROX NCL9-ASSOC nursery NCL12-child
ka-ky-a-zw-ire=mbe oku ma-beere nti
 SUBJ.NCL12-still-abandon-PFV=FOC NCL17(LOC) NCL6-breast COMP
ka-ab-e ka-tandika oku-soma.
 SUBJ.NCL12-go-SBJV SUBJ.NCL12-start NCL15(INF)-read
 ‘Long ago, before they brought these nurseries, [when] a child has only
 stopped breastfeeding, it would go and start studying.’
 (RuuliCorpus, glosses added)

Crucially though, as examples like (139, 144) above show, in the Bantu languages this meaning has become more general to the extent that an inherent ranking or fixed sequence (other than the mere possibility for events to occur after one another) is no longer a prerequisite, similar to the cases of Culina *-kha* and Mateq *bayu*.

3.4.4 Scalar restrictive

Introduction In this section, I discuss the use of STILL expressions as scalar restrictive operators. Example (149) is an illustration. Here, Huallaga-Huánuco Quechua *-raq* serves the function of “indicat[ing] that the action/event of the clause was an extreme measure, i.e., not carried out to an ordinary degree or applied to the ordinary objects.” (Weber1989).

(149) Huallaga-Huánuco Quechua

Sasa-ta-raq-shi hichqa-yku-n awkin-qa.
 difficult-OBJ-still-EVID strike-PFV-3 old_man-TOP
 ‘With difficulty, the old man striked the match (*sasataraqshi* implies that
 it was only with considerable difficulty that the old man was able to
 manage striking a match).’ (Weber1989)

²⁰The first instance of *ky-a* in (148) forms part of a NOT YET construction (‘were still to bring > hadn’t yet brought’); see Section 2.3.1. In subordinate contexts this construction serves to mark precedence (‘when they hadn’t brought yet > before they brought’); see Section 2.5.3.3.

3 Non-temporal uses

Distribution in the sample Table 3.10 lists the four expressions in my sample which have a scalar restrictive use. As can be gathered, these are found in two geographically adjacent Romance languages, and in two unrelated languages from central/western South America. One out of the four expressions, Huallaga-Huánuco Quechua *-raq*, is an exclusive operator, i.e. it signals that none of the context propositions possibly hold true true. The other three are *at least*-type restrictives. In the French and Spanish cases, this function is restricted to the protases of counterfactual conditionals.

Table 3.10: Scalar restrictive functions

M.-area	Language	Expr.	Constraint	Type	Appx.
Eurasia	French	<i>encore</i>	Counterfact. cond.	<i>At least</i> type	D.2.1.9.1
	Spanish	<i>todavía</i>	Counterfact. cond.	<i>At least</i> type	D.13.2.9.1
South America	H.-H. Quechua	<i>-raq</i>	n/a	Exclusive	G.3.1.6.1
	Movima	<i>di:ra(n)</i>	n/a	Exclusive	G.4.1.3.1

In what follows, I first take a closer look at the case of *-raq* and then move on to Movima *di:ra(n)*. Lastly, I discuss the case of French *encore* and Spanish *todavía* in conjunction with counterfactual protases.

A closer look and discussion: H.-H. Quechua *-raq* The one scalar exclusive expression in my sample, Huallaga-Huánuco Quechua, was illustrated in (149) above. Another example is given in (150).

(150) Huallaga-Huánuco Quechua

Context: a husband has been informed that his wife is having an affair with another man.

Lulla-ku-nki-chari kiki:-raq-mi *warmi:-ta* *watqa-yku-shaq.*
 lie-REFL-2-surely self:POSS.1-still-EVID wife-POSS.1-OBJ spy-PFV-FUT.1
Rika-yku-shaq.
 see-PFV-FUT.1

‘You must be lying! I myself will spy on my wife. I will see. (implies that nothing will determine the truth short of the speaker’s spying on his wife)’ (Weber1989)

As can be seen in (149, 150), with *-raq* as a scalar restrictive, the focus denotation ranks higher on some salient scale than the alternatives under consideration.

3.4 *Restrictive*

Thus, in (149) contextual alternatives include ‘with ease’ and ‘with an average effort’, and in (150) the discourse environment suggests second-hand information as a value ranking lower on an epistemic scale. The scalar restrictive function of *-raq* appears to also underlie several idiomatic uses, such as the construction illustrated in (151a), where it is conceivable that ‘it sure is hot’ goes back to ‘nothing less than this is truly hot!’. Cases like (150) might motivate the dubitative collocation *-chu-raq* ‘Q-still’, illustrated in (151b).

- (151) Huallaga-Húanuco Quechua
- a. *Chay-raq aka-y-lla-q.*
that-still be_hot-INF-only-TOP
'It sure is hot!'
 - b. *Kanan hunaq tamya-chu-raq?*
now day rain-FUT.3-Q-still
'Will it perhaps rain today?'
(Weber1989)

In addition, *-raq* also serves as scalar exclusive operator with temporal frame expressions (Section 2.5.2.1). Like the cases in (149, 150), time-scalar restrictive *-raq* requires lower alternatives in the form of earlier times. What is more, some examples in Weber1989’s grammar are compatible with both readings. For instance, example (152) involves an earliest time (once a decision has been made, possibly preceded by consulting with other authorities) as well as a specific degree (the highest authority).

- (152) Huallaga-Huánuco Quechua
- Hatun awturidaa-chaw-raq-mi musya-ka-:-shun*
big authority-LOC-still-EVID know-PASS-FUT:1PL.INCL
kapital-chaw-raq-mi.
capital-LOC-still-EVID
'We will find out only at the higher authority, in the capital (and we will not find out any sooner).' (Weber1989)

The shared requisite that the common ground contain lower alternatives sets the time-scalar and general scalar restrictive functions of *-raq* apart from a third use, namely as ‘for now, first’ (Section 2.4.5.1). The latter is illustrated in (153), where the act of forming a skein is related to more advanced steps in a series.

3 Non-temporal uses

- (153) Huallaga-Huánuco Quechua

Ese nuwal-wan tiñi-rku-r atapa-nchi:-raq.

that walnut-COM dye-then-ADV form_skein-1PL.INCL-still

'Dying it with that walnut, we first form a skein.' (Weber1989)

On the diachronic plane, vanBaar1997 reports an examination of several Quechuan languages and suggests that the 'for now, first' use constitutes the historically original function of *-raq* and its cognates. In this scenario, the time-scalar restrictive 'not until' function of the same items could easily go back to a reanalysis of 'first *p, q*' as 'not until *p, q*'. The more general restrictive function I discuss here, which shares the scale reversal with the temporal restrictive one, would then have been brought about by bridging contexts like (152). Assuming that vanBaar1997 is on the right track, then *-raq* as an exponent of STILL would be a separate offspring. As I discuss in some more detail in Section 2.4.5.1, it is likely that the development from 'first, for now' to marking persistence was preceded, or catalysed, by the expression of NOT YET *p* via '¬*p* for now', which allows for an alternative parsing as STILL ¬*p*. Figure 3.6 is a graphic illustration of this assumed chain of developments. More comparative work on Quechuan is needed to see whether it holds up against further scrutiny.

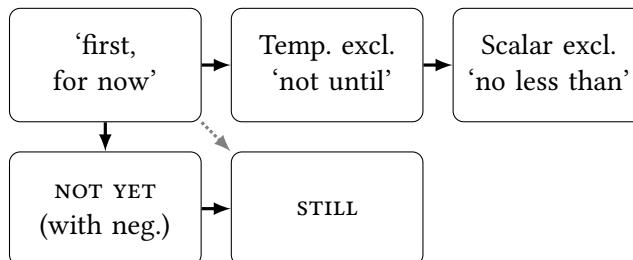

Figure 3.6: Hypothetical, partial diachronic network for H.-H. Quechua *-raq*

A closer look and discussion: Movima *di:ra(n)* Moving over to the *at least*-type restrictives in my sample, example (154) illustrates Movima *di:ra(n)*. Like the evaluative use of English *at least* (Kay1992; Gast2012), *di:ra(n)* invokes a bouleptic scale. Thus, in (154) seeing a path is subjectively evaluated as a positive development, though it does not yield the maximum degree of contentment.

- (154) Movima

Context: about how a place has changed over the course of the years.

3.4 *Restrictive*

Jayna ney di:ra, di:ra ay jayna de:deye, jayna ay dede:ye

 is to:wa neyru jema'a.

ART.PL path here also

‘Ya aquí siquiera, siquiera ya se ve esto, ya siquiera se ve un camino aquí.’ [Now here you can at least see ... now you can at least see a path]’ (MovimaCorpus)

Example (155) is another illustration. Again, the common ground provides for propositions with higher-ranking contextual implications, corresponding to a less gruesome death, but also a lower ranking one in which the late witch receives no dignity whatsoever. The lower-ranking propositions are implied, for all rhetoric purposes, whereas the higher-ranking ones are false (cf. Gast2012).

(155) Movima

Context: a woman who had the magic power of transforming into a jaguar has been caught and her jaguar hide has been burned, leading to her gruesome death.

already still DEM.N.PST bury=3PL

‘Ya siquiera la enterraron (le dieron una sepultura cristiana porque era humano). [They at least buried her (they had a Christian funeral for her, because she was human)]’ (MovimaCorpus)

There is a striking conceptual similarity between *di:ra(n)* as an exponent of **STILL** and its ‘at least’ function. Thus, the phasal polarity function involves a situation that has progressed beyond its onset, but which has not reached its conceivable end. Likewise, *di:ra(n)* as a scalar restrictive marker involves a degree of evaluation that lies above the minimum, but below the conceivable maximum. The main differences lie in the nature of the scales and the status of the cut-off point. Figure 3.7 is a graphic illustration of these parallels. There is also a striking similarity to the **STILL**-as-marginality use (Section 3.2), except for the inverse ordering relation that goes along with the latter.

A closer look and discussion: French *encore* and Spanish *todavía* The topic of marginality brings me to the remaining two expressions in Table 3.10, French *encore* and Spanish *todavía*. These serve as *at least*-type restrictives whose focus is the protasis of a counterfactual conditional construction, where they signal a minimal requirement. This is illustrated in (156) for Spanish *todavía*, where

3 Non-temporal uses

Figure 3.7: Graphic illustration of Movima *di:ra(n)*

having children is depicted as (close to) the lowest conceivable degree of responsibilities that would justify saving up money. French *encore* is shown in (157), where it is signalled that standing straight is the least one has to do to have so much as a chance of not being pointed out; note the two possible orders *encore si/si encore*.

- (156) Spanish

¿Para qué ahorr-as?; todavía si tuvier-as hijo-s
 for what save_money-2SG still if have.PST.SBJV-2SG child-PL
esta-ría justificado.
 COP-COND.3SG justified

‘What are you saving money for? If you at least had kids, then it would make sense.’ (RAEDictionary, glosses added)

- (157) French

Si encore / encore si tu te ten-ais droit, tu
 if still still if 2SG REFL.2SG keep-PST.IPFV.2SG straight 2SG
aurais quelque chance de ne pas te faire montrer
 have.COND.2SG some chance of NEG NEG OBJ.2SG make.INF show.INF
du doigt.
 of:ART.DEF:SG.M finger

‘If you at least stood straight, you’d have some chance of not being pointed out.’ (VictorriFuchs1996, glosses added)

Both cases can be traced back to *encore* and *todavía* as markers of marginality. To briefly summarize from Section 3.2, the marginality use of STILL expressions addresses the question of whether or not a given entity falls within the bounds of a specific scale, such as the Spanish territory in (158a, 158b). As in these examples, marginality often invites a contrast between the topical argument and entities that fall outside the relevant scale.

3.4 *Restrictive*

- (158) a. French

Irun, c'-est encore l'-Espagne (et Hendaye,
 I. PROX.SG.M-COP.3SG still ART.DEF:SG-Spain and H.
c'-est déjà la France).
 PROX.SG.M-COP.3SG already ART.DEF:SG.F France

- b. Spanish

Irún todavía es España (y Hendaya ya es
 I. still COP.3SG Spain and H. already COP.3SG
Francia).
 France

both: ‘Irún is still in Spain (and Hendaya is in France already).’
 (Garrido1991, personal knowledge)

With this in mind, VictorriFuchs1996 point out that the initial French example (157) can be paraphrased with *encore* as a marker of marginality inside the apodosis clause; see (159). It then anaphorically refers to the proposition expressed in the antecedent clause, ranking it on a scale of efforts and evoking a contrast with alternative propositions. The same holds true for the Spanish example (156), as shown in (160).

- (159) French

Si tu te ten-ais droit, tu aurais encore quelque chance de ne pas te faire montrer du doigt.
 if 2SG REFL.2SG keep-PST.IPFV.2SG straight 2SG have.COND.2SG still

 doigt.
 finger

‘If you stood straight, then you’d still have some chance of not being pointed out.’ (VictorriFuchs1996, glosses added)

- (160) Spanish

¿Para qué ahorr-as? si tuvier-as hijo-s todavía est-aría justificado.
 for what save_money-2SG if have.PST.SBJV-2SG child-PL still
 COP-COND.3SG justified

‘What are you saving money for? If you had kids it would still make sense.’ (personal knowledge)

What is more, French *encore* is sometimes prosodically set off from *si* ‘if’. This is likely to have syntactic correlates, such that (161) can be parsed with *encore* inside

3 Non-temporal uses

the apodosis clause, while the protasis constitutes a parenthetical insertion. In the same vein, the Spanish example (156), repeated below, could also receive a reading in which *todavía* forms part of the apodosis clause ‘it would still make sense’, from which it is separated by a parenthetical protasis ‘if you had kids’.

- (161) French
Encore, si c'-était *six heure-s et demie, vous*
 still if PROX.SG.M-COP.PST.IPFV.3SG six hour-PL and half 2PL
pourriez décider de vous lever.
 can.COND.2PL decide.INF of REFL.2PL get_up.INF
 'If it was half past six, then you'd still decide to get up.'
 (VictorriFuchs1996, glosses added)

(156) Spanish
¿Para qué ahorr-as?; todavía si tuvier-as hijo-s
 for what save_money-2SG still if have.PST.SBJV-2SG child-PL
esta-rí-a justificado.
 COP-COND-3SG justified
 'What are you saving money for? If you at least had kids, then it would make sense.' (RAEDictionary, glosses added)

In other words, and as far as their syntax is concerned, Spanish *todavía si* and French *encore si/si encore* ‘if at least’ can be understood as a result of rebracketing, as illustrated in (162). In this scenario, the alternative order *si encore* in French constitutes a subsequent development, which is in line with what is found with other uses of *encore* as a focus-sensitive operator (see e.g. Section 2.5.2.3).

- (162) [encore/todavía [si p] q] > [encore/todavía si p] [q]

In semanto-pragmatic terms, the development just outlined involves just a minor conceptual leap, namely the conventionalization of meaning components whose seeds are already planted in the marginality use. Thus, in the geographic examples (158a, 158b) the town of Irún is compared both to less marginal exemplars and to locations that fall entirely outside of the Spanish territory. In the same vein, in the counterfactual conditionals the possible world depicted in the protasis is compared to other hypothetical cases that are more likely to yield the conditional relationship true (e.g. making a greater effort, having greater responsibilities, etc.) as well as to the actual world, which does not. What is more, the marginality use goes along with an inverted scale, such as degrees of geographic *decentrality* in (158a, 158b). Similarly, conditional protases are a

3.5 Broadly modal and interactional uses

well-known scale-reversal context (e.g. **Haspelmath1997**), which makes the two a perfect match. A graphic comparison is given in Figure 3.8. Note that Figure 3.8 differs from the Movima illustration in Figure 3.7b above in that with Movima *di:ra(n)* the excluded values lie higher on a positively defined scale than the focus value.

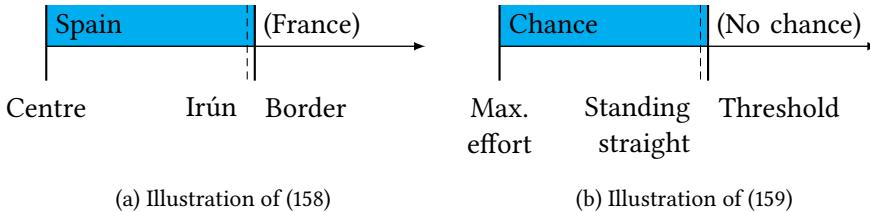

Figure 3.8: Graphic illustration of (158) and (159)

Lastly, the examples I have discussed so far all featured an overt apodosis. However, the latter can be left implied, thereby giving way to counterfactual wishes and exclamations like the ones in (163, 164).

(163) French

Si encore il faisait un effort!

bucks for article, ART.INDEF:SG.F pittance(F)

‘If at least they paid you, but you can see, twenty bucks for an article, a mere pittance.’ (Delibes, *Cinco horas con Mario*, cited in Bosque2016, glosses added)

3.5 Broadly modal and interactional uses

3.5.1 Introduction

In this section, I address different uses that are either modal (in the widest possible sense of the term), or which are predominantly pragmatic and associated with specific types of speech acts. In Section 3.5.2 I discuss different functions

3 Non-temporal uses

pertaining to, or related to, concessivity. I then briefly turn to some other, more ideosemantically connective functions in Section 3.5.3. Afterwards, I turn to uses in the realm of non-actualization of a predicted event in Section 3.5.4. Lastly, in Sections 3.5.5 and 3.5.6 I address functions pertaining to specific types of questions and exclamations, respectively.

3.5.2 Concessive and related functions

In this subsection I survey the uses that **STILL** expressions have in concessive constructions and in notionally related functions. I understand the term **CONCESSIVE** as an umbrella for complex clause patterns that involve two propositions which are evaluated against a background assumption that they are generally incompatible (e.g. **KoenigConcessives**). It is well-known that **STILL** expressions are a common device in such constructions; see (165).

- (165) English

*Peter studied hard for the exam. He **still** failed.*

In (165), *still* forms part of the second half of the concessive construction, namely the clause depicting a situation that holds true despite opposing circumstances. The relevant expressions may also figure in the clause that depicts this circumstance itself, as shown in (166) for the collocation of Spanish *aún* plus the subordinator *que*.

- (166) Spanish

Aun-que Pedro estud-ió mucho, fall-ó
 still-SUBORD P. study-PST.PFV.3SG much fail-PST.PFV.3SG
el examen.

ART.DEF:SG.M exam(M)

‘*Although* Pedro studies hard, he failed the exam.’
 (personal knowledge)

I follow Croft2022 in referring to the clause depicting the unfavourable circumstance as the **PROTASIS** and to the clause that describes the unexpected outcome as the **APODOSIS**. This terminology has the advantage of readily covering not only concessives proper, but also **CONCESSIVE CONDITIONALS**. As the name suggests, the latter are constructions that combine the characteristics of concessive and conditional ones (e.g. Bossuyt2023; HaspelmathKoenig1998). Example (167) is an illustration, featuring a concessive conditional of the scalar kind; I address the various subtypes of concessive conditionals in the adequate places below.

3.5 Broadly modal and interactional uses

(167) Spanish

Aun-que te qued-es sin dorm-ir, h-as de
 still-SUBORD REFL.2SG remain-SBJV.2SG without sleep-INF have-2SG of
prepar-ar bien este examen.
 prepare-INF well PROX.SG.M exam(M)

‘Even if [it means that] yo don’t get any sleep, you have to prepare yourself well for this exam.’ (RAEGramatica, glosses added)

Lastly, my choice of designations does not imply that the two clauses are always found in the order protasis–apodosis. Thus, in (168) the protasis follows the apodosis.

(168) Spanish

Despert-ó d-el coma ... con un
 wake_up-PST.PFV.3SG of-ART.DEF:SG.M coma(M) with ART.INDEF:SG.M
marcad-o acento australian-o, aun-que jamás ha

est-ado en ese continente
 COP-PTCP in DEM.SG.M continent(M)

‘He woke up from the coma ... with a marked Australian accent, although he has never been to that continent.’ (Semana, cited in RAEGramatica, glosses added)

In what follows, I first survey the use of STILL expressions within the protases of concessive constructions (Section 3.5.2.1) and then turn to the marking of apodoses (Section 3.5.2.2). Afterwards, I discuss derived, stand-alone uses as concessive interjections (Section 3.5.2.3) and a likely related counter-expectation function of Mandarin Chinese *hái* (Section 3.5.2.4)

3.5.2.1 Concessive protases

Introduction Example (169) illustrates a STILL expression as a marker of a concessive protasis. Here Spanish *aún*, in combination with a gerund, signals that a declaration of love is an unusual embedding for the state-of-affairs depicted in the following apodosis, the absence of the word *love*. As in this case, all relevant instances in the sample involve multi-morphemic collocations.

(169) Spanish

Lo que más impresion-a de esas página-s es
 3SG.N SUBORD more/most impress-3SG of DEM.PL.F page(F)-PL COP.3SG

3 Non-temporal uses

que, aun trat-ándo-se de una declaración

 of love ART.DEF:SG.F word(f) love NEG appear-3SG never
 'What's most impressive about those pages is that, **despite being a declaration of love**, the word *love* never appears.' (Martínez, *Santa Evita*, cited in RAEGramatica, glosses added)

Distribution in the sample Table 3.11 lists the expressions and collocations in my sample that mark concessive protases. On examination, several patterns emerge. In terms of areal distribution, the data suggest that STILL expressions serving as (part of) markers of concessive protases are predominantly a western Eurasian phenomenon, the sole exception in my sample being Rapanui. In syntactic terms, the majority of collocations in question feature some kind of deranking, at least *prima faciae*, be it subordination (French *encore que*, Spanish *aun cuando*, *aunque*, *aun si*, *todavía que*) or the nominalization of a predicate (Rapanui *nōatu te* and the Spanish *aún*-plus-gerund construction). Lastly, nearly all STILL expressions involved can also participate in marking concessive apdoses. The exception to both generalizations is German *noch so*. This collocation is also an outlier in that it is semantically much more specific, featuring only in universal concessive conditionals 'no matter how much'. In what follows, I first examine deranked protases in some more depth and then briefly turn to the case of German *noch so*.

Table 3.11: Concessive protases marking

M.-area	Language	Expression	Collocation		Appendix
Eurasia	French	<i>encore</i>	<i>encore que</i>	'still SUBORD'	D.2.1.10.2

		<i>todavía</i>	<i>todavía que</i>	'still SUBORD'	D.13.2.10.1
Papunesia	Rapanui	<i>nō</i>	<i>nōatu te</i>	'still-away(?) ART'	F.15.1.5.1

A closer look: deranked protases It is well known that concessive constructions can convey a variety of pragmatic nuances (e.g. KoenigConcessives), being

3.5 Broadly modal and interactional uses

able to operate in different conceptual domains and to express various degrees of concession (see **Bell2010** on the latter). That is to say, despite the common denominator of marking an obstructing circumstance, the exact meaning contributions and usage patterns of the collocations in Table 3.11 are not necessarily congruent. What is more, some expressions and collocations are attested only in concessives proper, while others are restricted to concessive conditionals, mostly of the scalar kind ‘even if’. Yet a third group can mark both.

The protases clauses governed by French *encore que* typically express concession on the speech-act level, signalling that the speaker may not have been justified in making a preceding statement (**MosegaardHansen2008**; **Morel1996**). As is normal for such rectificational concessives (**KoenigConcessives**), they follow the apodosis. Both points are illustrated in (170). Here, the speaker restricts their previous statement, signalling that, despite their initial answer ‘hard to say’, there is indeed something definite to be stated about the subject matter. Marking a type of afterthought, *encore que* is often prosodically set off from the preceding clause and from the one it introduces. This, in turn, has given rise to a holophrastic, stand-alone use (Section 3.5.2.3).

(170) French

A: *Cette solidarité, est-ce une tendance montante ou déjà une survivance en crise?*

‘Is this show of solidarity a growing trend or already an unstable relic from the past?’

B: [Difficile de le savoir.]_{APODOSIS} [**Encore que**
 difficult of 3SG.ACC.M know still COMP

à la prudence sur les bons
 to ART.DEF:SG.F caution(F) about ART.DEF:PL good.PL.M
sentiments.]_{PROTASIS}
 feeling(M).PL

‘Difficult to say. Still, the example of the United States should encourage us to be skeptical about finer feelings.’ (*Nouvel Observateur*, cited in **MosegaardHansen2008**, glosses added)

The Spanish collocation *todavía que*, which in the present-day language is restricted to American varieties, has been described as typically contributing an additive nuance. Thus, according to **Morera1999** and **RAEGramatica**, it can often

3 Non-temporal uses

be paraphrased as *encima de que p* ‘on top of *p*’. This fully mirrors how *todavía* as a marker of a concessive apodosis clause tends to feature a notion of ‘*p*, on top of that *q*’. Example (171) is an illustration.

(171) Spanish

Context: she shouldn't be ungrateful.

Todavía que la dej-amos entr-ar, contest-a con sarcasmo-s!
still SUBORD 3SG.ACC.F let-1PL enter-INF reply-3SG with sarcasm-PL

‘Even though/as if it weren't sufficient that we let her in, she responds with ridicule.’ (Gotbeter, *La prudencia*; cited in Bosque2016, glosses added)

As far as the discourse status of the proposition is concerned, with French *encore que* and Spanish *aun cuando, aunque* this is tied to the choice of mood. The indicative marks an assertion, as in (170) above, whereas the subjunctive signals given information that is commented upon. In Spanish, the latter configuration can also yield a scalar concessive conditional; see (172). Both types of readings are also available with the Spanish *aún*-plus-gerund construction (which does not feature mood inflection), whereas the collocation *aun si* appears to always marks scalar concessive conditionals.²¹

(172) Spanish

Aun-que llueva sal-go.
still-SUBORD rain.SBJV.3SG go_out-1SG

- ‘Even if it is raining, I am going out.’
- ‘Even though it's raining [given information], I am going out.’

(personal knowledge)

Scalar concessive protases governed by *aunque* lie at the heart of the complex focus particle *aunque sea* ‘so much as’, lit. ‘even if it were’ (Section 3.3.4). Example (173) is an illustration of this expression.

(173) Spanish

Si dices aun-que sea una palabra, v-as a
if say.2SG still-SUBORD COP.SBJV.3SG ART.INDEF:SG.F word(F) go-2SG to

²¹The question of mood selection is slightly more complex in the case of *aun si*, as *si* ‘if’ brings with it a constraint against the present subjunctive (RAEGramática).

3.5 Broadly modal and interactional uses

ten-er problema-s.

have-INF problem-PL

‘If you say **even one word** (lit. if you say [something], even if it were a word), you’ll get into trouble.’ (GastvanderAuwera2011)

Lastly, Spanish *aunque* can combine with *más* ‘more, most’ to mark universal concessive conditionals ‘no matter how much’ (Appendix D.13.1.8.5). This is illustrated in (174). The semantics at play is fairly straightforward: from the assertion that the conditional relationship holds under the most adverse circumstance (the contribution of *más*), it normally follows that it holds across the entire set of conceivable circumstances.

(174) Spanish

aun-que más te duela.

still-SUBORD more/most OBJ.2SG hurt.SBJV.3SG

‘Sometimes to best thing to do is to distance yourself, **no matter how much it might hurt**’ (found online, glosses added).²²

Discussion: deranked protases I now turn to the question of what motivates the recruitment of **STILL** expressions in deranked concessive protases, and this issue is best approached from a diachronic angle. To anticipate some of the following discussion, in all cases the link to phasal polarity appears to be an indirect one, mediated by other functions of the same items, primarily ones pertaining to additivity. This is, of course, a manifestation of a more far-reaching tendency for additives to be employed in the marking of concessive protases (Forker2016; Koenig1985).

Thus, Spanish *aún* is not only a phasal polarity expression, but also serves as a scalar additive marker ‘even’ (Section 3.3.4). As has been repeatedly observed in the literature, this function doubtlessly lies at the heart of the relevant collocations (e.g. Elvira2005; PerezSaldanyaVincent2014; RAEGramatica).²³ This is most obvious in the case of scalar concessive conditionals like the one in (175). Here *aún* as ‘even’ signals that its focus denotation, the proposition contained in the subordinate clause, yields a particularly informative statement ‘even *p* being the case, *q*’. This licenses the inference that the conditional relationship also holds true under less antagonistic circumstances (cf. Koenig1991).

²²<https://twitter.com/Xavi30856894/status/1137061141375606784> (10 November, 2022).

²³In the case of *aún* plus gerund, additional motivation is found in the fact that gerunds in peripheral position by themselves allow for a concessive reading (RAEGramatica).

3 Non-temporal uses

(175) Spanish

Aun-que te qued-es sin dorm-ir, h-as de
 still-SUBORD REFL.2SG remain-SBJV.2SG without sleep-INF have-2SG of
prepar-ar bien este examen.
 prepare-INF well PROX.SG.M exam(M)

‘Even if [it means that] you don’t get any sleep, you have to prepare yourself well for this exam.’ (RAEGramatica, glosses added)

Such concessive conditionals based on *aún* as ‘even’ not only allow for a compositional analysis, but they also correspond to the earliest respective attestations (Elvira2005; PerezSaldanyaVincent2014). From there, one can assume a gradual extension to marking ordinary concessives. This is a cross-linguistically common development (Koenig1991, KoenigConcessives) and motivated by the fact that the boundary between the two types is fluent, as was seen for *aunque* in (172) above:

In many, and perhaps all, languages, concessive conditionals with focus particles can be used in a factual sense, i.e., in exactly the same way as genuine concessive clauses e.g., English *Even if he IS my brother, I am not going to give him any more money.* (KoenigConcessives)

By and large, the case of the Spanish collocations with *aún* is reflected in French *encore que*. While MosegaardHansen2008 takes this collocation to be directly related to *STILL*, several points speak against this assumption, at least as far as its ultimate origins are concerned. First, if persistence were to lay at the heart of *encore que*, one would expect it to have an anaphoric function and hence to mark an apodosis, in the same way that *STILL* involves an anaphorically retrieved topic time (i.e. ‘*p*, [at that time] still *q* > ‘*p*, nonetheless *q*’). But *encore que* clauses are semantically protases, as they depict an opposing circumstance, notwithstanding their present-day preference for introducing afterthoughts. Secondly, a precursor of this construction, albeit without the subordinator *que*, is attested in early documents (MosegaardHansen2008). Crucially, these attestations feature the subjunctive mood and mark scalar concessive conditionals, as in (176).

(176) Old French, ca. 12th century

encore ait ele en son tresor // mil mars
 still have.SBJV.3SG 3SG.F in POSS.3SG:SG vault thousand mark.PL
d’-argent et mil mars d’-or, // si est povre n’-i a
 of-silver and thousand mark.PL of-gold if COP.3SG poor NEG-EXIST

3.5 Broadly modal and interactional uses

celi // por qu'-ele ait avarisse en li
 REL for SUBORD-3SG.F have.SBJV.3SG avarice in 3SG
 'and even if she has a fortune // of a thousand marks of silver and a
 thousand marks of gold, // she is poor there is no-one [who isn't] //
 provided she has avarice within her.' (Gautier d'Arras, *Eracle*, cited in
 MosegaardHansen2008, glosses added)

While French *encore* does not function as a full-fledged scalar additive in the way that Spanish *aún* does, it has a comparable additive function 'as late as' in collocation with temporal foci (Section 2.5.2.3). The latter use is attested from roughly the same historical period on as the construction in (176), and it takes only a short conceptual leap from 'as late as' to 'even if', namely a mapping from times to possible worlds. What is more, an origin in scalar concessive conditionals would also be in line with the history of its Catalan (not in my sample) cognate *encara que* (see PerezSaldanyaSalvador1995). In a nutshell, then, all these points suggest that French *encore que* started out as marking the protases of scalar concessive conditionals, from where it spread to the protases of concessives proper. These would then ultimately become increasingly used in a postponed manner. To MosegaardHansen2008's credit, it is possible that the very last step of the scenario just outlined was motivated by the presence of the STILL expression *encore*, in the sense that

with "encore que *p*" the speaker retrospectively ... suggest[s] that she is not sure that the border between a negative conclusion ~r (which would be the expected ...) and the positive conclusion r ... has actually been crossed after all. (MosegaardHansen2008)

Additivity also seems to play a role in the case of Spanish *todavía que* 'still SUBORD', which was illustrated in (171) above. As discussed in the context of that example, *todavía que* has been described as often bringing about a notion of 'on top of *p*, as if it weren't enough that *p*'. In this contribution, it fully mirrors *todavía* as a marker of concessive apodoses, the main difference being one of cataphora in the case of *todavía que* protases, as opposed to the anaphoric *todavía* apodoses (Bosque2016).

Lastly, the one exception to additivity as playing a major role is the Rapanui *nōatu*-plus-nominalization construction. The composition of this collocation, illustrated in (177a), is not fully understood. It might involve the STILL expression *nō*, which is also serves as an exclusive marker 'just, only' (Section 3.4.2), together with directional *-atu* 'away'. The directional morpheme also forms part

3 Non-temporal uses

of another concessive construction *ka atu* ‘even if’ (Kieviet2017) and it is possible that *nōatu* is based on a meaning along the lines of ‘just move away from *p*’ > ‘nevermind *p*’. Alternatively, *nōatu* might be a non-compositional loan from Tahitian (Kieviet2017). No matter what its history may be, it is clear that the concessive use is just a special case of a much broader adnominal ‘nevermind’ function; see (177b).

- (177) Rapanui
- a. *Pura oho au ki a ia mo u'i pauró te tapati, noatu te roa o te kona hare*
HAB go 1SG to CONT 3SG BEN see every ART week nevermind ART long of ART place house
'I visit him regularly every week even though he lives far away.'
(duFeu1996)
 - b. *Nōatu tō'ona ture mai.*
nevermind POSS.3SG scold hither
'Don't mind his scolding.' (Kieviet2017)

A closer look and discussion: German *noch so* Up to this point, I have set aside the German collocation *noch so*. In its concessive function, this complex item is restricted to universal conditionals ‘no matter how much’, as illustrated in (178).

- (178) German
- Du kann-st noch so (sehr) bitt-en, es wird dir nichts nütz-en.*
2SG can-2SG still so very ask-INF 3SG.N will.3SG 2SG.DAT nothing be_of_use-INF
'You can beg as much as you like, it won't help.'
(Duden, glosses added)

Noch so is clearly based on *noch* in additive function (HaspelmathKoenig1998; MetrichFaucher2009; Shetter1966). This is reflected in the fact that it receives focal stress here, in the same way it does when used as an additive with entities of the same kind ‘another’ (Section 3.3.1). According to the DWDS (DWDS), the collocation started out as *noch ein-mal so* ‘still one-time so, i.e. by another identical degree’. In the present-day language, the item *so* also serves to signal a particularly high degree of some property (e.g. DWDS), such that the *noch so*

3.5 Broadly modal and interactional uses

can be understood along the lines of ‘with any additional degree conceivable’ (MetrichFaucher2009; Shetter1966). Outside of my sample, a rough parallel can be found in the Turkish construction illustrated in (179).

(179) Turkish

Bu konu-da ne kadar iyi bir kitap yaz-sa-n=da
 PROX subject-LOC what much good one book write-COND-2SG=also
meşhur ol-a-ma-yacak-sın.
 famous become-can-NEG-FUT-2SG

‘However good a book you write on this subject, you won’t become famous.’ (GoekselKerslake2005, glosses added)

Lastly, concessive *noch so* is also found as a focus quantifier outside of concessive constructions in the stricter sense, as in (180).

(180) German

Sie bekam nur strahlende, glückliche Aug-en, und damit
 3SG.F got.3SG only shining.ACC.PL happy.ACC.PL eye-PL and thereby
sag-te sie mehr als mit noch so vielen Wort-en.
 say-PST.3SG 3SG.F more than with still so many.DAT.PL word-DAT.PL
 ‘Her eyes became only radiant and happy, and thereby she said more
 than any amount of words [could possibly tell].’ (Remarque, *Drei
 Kameraden*, cited in Shetter1966, glosses added)

3.5.2.2 Concessive apodoses

Introduction In this subsection I discuss STILL expressions as markers of concessive apodoses. Example (181) is an illustration from Mandarin Chinese. Here, *hái* highlights the presumed incompatibility between the two propositions ‘(it is) such a special occasion’ and ‘you forgot about it’.

(181) Mandarin Chinese

Zhème hǎo de shèr, nǐ hái gěi wàng le!
 such good ASSOC event 2SG still give forget PFV
 ‘Such a special occasion, and still you forgot about it!’
 (Wiedenhof2015)

Distribution in the sample Table 3.12 lists the expressions and collocations in my sample that occur as markers of concessive apodoses. As can be gathered,

3 Non-temporal uses

STILL expressions in this function are a common occurrence. Including borderline and tentative cases, the marking of concessive apodoses is attested for 19 expressions in 17 languages. In addition one could list the case of German *dennoch* ‘nonetheless’, which historically goes back to *denn-noch* ‘then-still’.²⁴ In geographic terms, the marking of concessive apodoses is attested for all macro-areas minus Australia,²⁵ which makes this one of the geographically most widespread coexpression pattern in my sample. It is noteworthy that the vast majority of cases involve independent grammatical words or bound roots, rather than affixes or clitics. In some cases from western Eurasia, the marking of concessive apodoses clauses plus ellipsis has also given rise to concessive-evaluative interjections; I discuss those instances separately in Section 3.5.2.3.

In what follows, I first take a closer look at some nuanced differences in meaning and use between the various expressions and collocations in question. I then address some structural differences to phasal polarity functions of the same items. Lastly, I turn to the question of the motivation underlying this coexpression pattern.

A closer look: flavours of concession As I pointed out in Section 3.5.2.1, concession comes in many flavours and strengths, which means that the expressions and collocations in Table 3.12 are not necessarily congruent in their meaning and use. Thus, for the French *encore*-plus-inversion construction,²⁶ MosegaardHansen2008 remarks that it signals that “the preceding discourse has not exhausted the topic” and that “the matter under discussion is not as simple as it appears”. This is illustrated in (182).

(182) French

“*Une enquête menée par une psychologue auprès de ces familles montre que les enfants ont tout à y gagner*”, précise-t-il.

“Research carried out by a female psychologist on these families shows that the children have everything to gain from it”, he specifies.

Mais encore faut-il pouvoir s’entendre
but still be_necessary.3SG-3SG.M can.INF REFL.3-understand.INF

²⁴Marking concessive apodoses is also attested for cognates of my sample expressions, including the Catalan cognate of French *encore*, *encara* (PerezSaldanyaSalvador1995) and Lao *ñang*, cognate with Thai *yai* (Enfield2007).

²⁵For an Australian candidate from outside my sample, see Bowern2012 on Bardi (Nyulnyulan) *gardi*.

²⁶*Inversion* here refers to a diachronically older order of pronominal clitics that is found in formal registers and is triggered by certain conjunctional adverbials; see MosegaardHansen2016.

officieux.
 unofficial.M

‘Still, the parents do have to be able to get along, without being afraid that the other will suddenly put an unexpected stop to their unofficial agreement.’ (Marie-Claire, cited in MosegaardHansen2008, glosses added)

The French collocation *et encore* ‘and still’, on the other hand, serves to cancel potential inferences (MosegaardHansen2008). This is shown in (183). Here, the first sentence might lead the addressee to conclude that Max is liked by his teacher, given that he is apparently a good student. This conclusion is ruled out in the second sentence.

(183) French

Max aura une très bonne note. Et encore
 M. have.FUT.3SG ART.INDEF:SG.F very good.F grade(F) and still
son prof ne l'-aime guère.
 POSS.3SG:SG.M teacher(M) NEG 3SG.ACC-love.3SG much
 ‘Max will get a very good grade. Even so, his teacher doesn’t like him very much.’ (MosegaardHansen2008, glosses added)

The third French marker in Table 3.12, the fixed expression *toujours est-il que* ‘still it’s the case that’, marks a weak form of concession, in which the speaker only states the facts, without taking a stance (MosegaardHansen2008); see (184). Note that *toujours* is a borderline case of a STILL expression though, perhaps better considered a marker of stasis.

(184) French

A: *Ton ami Fernand ne me plaît pas du tout: il est trop arrogant.*
 ‘I don’t care for your friend Fernand at all: he’s too arrogant.’

B: *Comme tu veux. Toujours est-il que-’il*
 as 2SG want.2SG still COP.3SG-3SG.M SUBORD-3SG.M
est beau mec.
 COP.3SG attractive.SG.M guy(M)
 ‘Fine. He’s good-looking, though.’ (MosegaardHansen2008, glosses added)

3.5 Broadly modal and interactional uses

Tunisian Arabic *bāqi*, likewise a borderline case of a STILL expression, is only attested in the apodoses of certain concessive conditionals. This is illustrated in (185) for an alternative concessive conditional.

- (185) *T-ikbir wulla t-usgur il-liffa*
 3SG.F-be_big.IPFV or 3SG.F-be_small.IPFV ART.DEF-viper(F)
muxwfa bāqi.
 dangerous-SG.F still
 ‘Qu’elle se trouvé à être grande ou petite, la vipère est toujours dangereuse. [Big or small, a viper is dangerous no matter what].’
 (MarcaisGuiga19581961, glosses by FischerEtAlTunisian)

English *still* in concessive use is commonly described as stressing coherence, whereas competing markers like *yet* and *nonetheless* invoke a more strongly contrastive notion (Bell2010; KoenigTraugott1982; Ranger2018; among others). This is shown in (186).

- (186) English
- Context: universality has been the topic of discussion.
The death of man is unique. Still it is universal.
 - Context: universality is a new, contrasting fact.
The death of man is unique. Yet it is universal.
 (KoenigTraugott1982)

In the collocation *but still*, this expression can occur at the right periphery of the sentence, without governing a second clause. In structural terms, this brings this fixed phrase close to the concessive interjections I discuss in Section 3.5.2.3. As far as its discourse function is concerned, Lewis2019 describes *but still* as providing “a retrospective speaker comment signalling that the unfavourable situation just expressed is bearable or can be disregarded”. Example (187) is an illustration.

- (187) English
I don’t know what they’ve done to it to make it spread but still.
 (BNC, cited in Lewis2019)

Spanish *todavía* as a concessive marker, on the other hand, often goes along with an additive notion along the lines of ‘on top of that’ (RAEGramática); see (188a). This nuance probably lies at the heart of the oddity that EderlyCurco2016 observe for cases like (188b), where the two propositions are in conflict with each

3 Non-temporal uses

other and hence do not readily allow for an additive interpretation. The additive element of concessive *todavía* is furthermore mirrored in its cataphoric, protasis-introducing counterpart *todavía que* (Section 3.5.2.1).

(188) Sapnish

- a. *Los obrer-o-s solo sab-en hac-er huelga-s y ART.DEF:PL.M worker-M-PL only know-3PL do-INF strike-PL and pon-er petardo-s, iy todavía pretend-en que se put-INF firecracker-PL and still pretend-3PL SUBORD REFL.3 les d-é la razón!*

- b. # *Sí, Harry golpe-a a su perro. Todavía es yes H. beat-3SG ACC POSS.3SG dog still COP.3SG un buen tipo..*
 ART.INDEF:SG.M good.M guy(M)
 (intended: 'Yes, Harry beats his dog. Still, he is a nice guy.')
 (EderlyCurco2016, glosses added)

Other than the specimen discussed so far, two cases in my sample appear to lie on the intersection between marking persistence and concession. The first one involves Classical Nahuatl *oc*, more specifically, clauses introduced by *ic oc/oc ic* 'thereby still/still thereby' plus a verb in the prospective aspect inflection or a verb in the generic present; the latter case is illustrated in (189). Judging from Launey1986's (Launey1986) description, this clause pattern expresses a persistent possibility despite unfavourable circumstances. The second fringe case involves Huallaga-Huánuco Quechua *-raq* plus a future tense verb with a first person subject; see (190). This collocation is commonly used so signal that the speaker maintains a certain plan, despite of what the addressee might assume (thus bordering on the prospective 'eventually' use I discuss in Section 2.4.4).

(189) Classical Nahuatl

- Ic oc palēhui-lo in pil-huâ.*
 thereby still help-PASS DET child-POSS.NMLZ
 'Par ce procédé la mère est encore soulagée. [By this procedure the mother is still relieved]' (Launey1986, glosses added)

3.5 Broadly modal and interactional uses

- (190) Huallaga-Huánuco Quechua

Ura-shaq-raq.

do-FUT.1-still

‘I will yet do it / I still intend to do it (despite your thinking that I won’t).’
(Weber1989)

A closer look: structural and combinatory characteristics Having discussed some nuances in meaning, I now turn to a few more abstract characteristics that set the use in concessive apodoses apart from its phasal polarity ancestor. The first difference pertains to aspectual compatibilities. Given that the situation in question need not persist in time, the use in the focus of this section is perfectly compatible with a perfective viewpoint and/or achievement predicates. For Mandarin Chinese, this was seen in (181) above. Example (191) is another illustration, featuring Tashelhyit *sul*.

- (191) Tashelhyit

Context: Fox has tricked a man into giving him food and then rushed off.
The man, however, was holding Fox’s tail, which has torn off.

POSS.2SG at hand POSS.1SG

‘You may be happy now, **but you left your tail in my hand!**’
(Stroomer2001, glosses added)

Relatedly, Kekchí *toj* in phasal polarity function does not normally combine with a negated predicate, whereas it does when it is used as a concessive marker; see (192).

- (192) Context: Moon’s father has asked Thunder to kill Moon and Sun.

Toj a'an ink'a' ki-r-aj.

still 3SG NEG PFV.EVID:3SG.P-3SG.A-desire

‘He still didn’t want to kill them (despite his brother’s wishes).’

(Kockelman2020)

Distinctive differences may also be found on the syntactic level. Thus, the French *encore*-plus-inversion construction features a marked order of pronominal elements that is not available in the phasal polarity function. In English, clause-intial *still* can only serve as a concessive marker, and a parallel situation

3 Non-temporal uses

obtains with Modern Hebrew *ʔadayin*, illustrated in (193). Presumably, in both cases this is a syntactic reflection of the wider scope of the concessive use.

(193) Modern Hebrew

ART.DEF-PROX.SG.F

‘Still, you shouldn’t give up on this experience.’

(found online, glosses added)

Discussion: from STILL to marking concessive apodoses Diachronically speaking, it is safe to assume that the concessive functions of all expressions and collocations in Table 3.12 are secondary, given the well-established tendencies for meanings to become increasingly textual and expressive (Section 1.6.2). In most cases the concessive uses can be linked directly to phasal notions. Thus, the broader domain of expressions for continuity or coexistence is a well-known source of concessive markers (Koenig1985, KoenigConcessives). What is more, the historic primacy of STILL is perceivable in many etymologies and diachronic corpus studies. All of this raises the question of what motivates a development from signalling phasal polarity STILL to marking concessive apodoses. In broad strokes, it can be said that “[p]ersistence of a given state of affairs is continuity. Persistence of a given state of affairs in a context containing adverse factors that would normally render such persistence unlikely amounts to concession” (EderlyCurco2016).²⁷

In slightly more hands-on terms, authors such as Deloor2012, EderlyCurco2016, KoenigTraugott1982, Lewis2019, and PerezSaldanyaSalvador1995 point to cases like (194) as bridging contexts. Here, the preceding clause depicts a time that is so advanced that the situation’s persistence can be reasonably questioned.²⁸ This

²⁷For very similar statements see JingSchmidtGries2009, Michaelis1993, Kockelman2020 and Yeh1998, among others. For Modern Hebrew *fadayin*, TsirkinSadan2019 additionally stipulates influence from English. In light of the wide-spread attestation of STILL expressions as markers of a concessive relationship, this seems superfluous.

²⁸Often, this is linked to the unexpectedly late scenario of STILL. My sample data is inconclusive here: as far as can be judged, most expressions in Table 3.12 are, in principle, compatible with

3.5 Broadly modal and interactional uses

allows for a concessive inference about the simultaneous incompatibility of the two states-of-affairs.

(194) English

It is midnight and he still working. (Koenig1985)

Works such as Ippolito2004, Koenig1977, Michaelis1993, on the other hand, stress the similarity between concession and the marginality use of STILL expressions. To briefly recapitulate from Section 3.2, the marginality use involves a metonymical transfer from times onto other scales and addresses the question of whether a given entity is included within the bounds of that scale. Example (195) is an illustration. By using *todavía* here, the speaker signals that Juan does not receive the greatest degree of sympathy from them, but unlike Pedro, he is somewhat likeable. The marginality use can thus lead to concessive overtones (cf. MosegaardHansen2008) along the lines of ‘far from the best case, but it does count’.²⁹

(195) Spanish

A Juan *todavía* lo aguant-o, pero a Pedro no.
ACC J. still 3SG.M.ACC tolerate-1SG but ACC P. NEG

‘I still stand Juan, but not Pedro.’ (EderlyCurco2016, glosses added)

Though the two approaches differ in their details, they ultimately agree that the recruitment of STILL expressions as markers of concessive apodoses involves the conventionalization of an erstwhile inference rooted in aligning possible worlds with some scale: “worlds are arrayed with respect to the degree to which they favour the outcome in question; the least adverse (or most favorable) world is nearest the origin” (Michaelis1993).

In addition to these general bridging contexts, Koenig1985 points out two specific constellations that may catalyse the emergence and conventionalization of a concessive inference. The first environment is clausemate negation, given that its felicitous use requires the corresponding affirmative (i.e. the more expected outcome) to be contained in the communicative common ground (e.g. Givon1978).

the unexpectedly late scenario of STILL. The major exception seems to be Classical Nahuatl *oc*. The issue is further complicated by the question of relative chronology: a marker’s compatibility at the time that the concessive functions arose need not be identical to those found on the synchronic plane.

²⁹The marginality uses is attested for seven of the expressions in Table 3.12, namely English *still*, French *encore*, Mandarin Chinese *hai*, Modern Hebrew *7adayin*, Swahili *bado*, Tashelhyit *sul*, and Thai *yan*.

3 Non-temporal uses

The second context are conditionals, which by themselves involve a mapping of propositions onto possible worlds. Both are at play in (196).

- (196) English

Even if Bill pays me £200, I'm still not going to do it. (Koenig1977)

Coincidentally, (196) also features the future tense. According to **vanBaar1991**, this is another common environment in which **STILL** expressions come to serve as concessive markers, presumably because of the modal element inherent to predictions. As I have discussed above, it is the future tense inflection to which concessive readings of Huallaga-Huánuco Quechua *-raq* are restricted. The same is true of Chuwabo =*vi* (but see below). Relatedly, with Classical Nahuatl *oc*, a concessive interpretation is found in the prospective aspect, and in certain generic context, apparently always in conjunction with modal nuances about persistent possibilities.

Discussion: other strands of motivation Up to this point I have focussed on direct links between concessive apodoses and phasal polarity **STILL** (or its close marginality cousin). In some instances, motivation for the concessive function can be found in other functions of the same items. Thus, based on a diachronic corpus study, **MosegaardHansen2008** discusses how the two relevant French constructions find additional motivation in the additive function of *encore* (Section 3.3.1). She specifically points to examples like (197). Here, the negated additive can be re-interpreted as a form of concession, countering a possible inference that someone who does not act as a judge may instead act as a counsel.

- (197) Old French, 13th century

Car nus ne doit estre en nule querele juges et avocas, et, se li ples n'estoit pas devant li mes devant autre seigneur, mes toutes voies li ples pourroit venir par devant li por reson de ressort,

‘For no man may be both judge and counsel in any dispute, and, if the case is not tried before him, but before some other lord, but might nevertheless come before him later in the event of an appeal,’

encore ne doit il pas estre avocas.

still NEG must.3SG 3SG.M NEG COP.INF council

‘he cannot act as counsel, either/he still cannot act as counsel’

(de Beaumanoir, *Coutumes de Beauvaisis*, cited in

MosegaardHansen2008, glosses added)

3.5 Broadly modal and interactional uses

As I hinted at above, additivity appears to also play a role in the use of Spanish *todavía* as a concessive apodosis marker.³⁰ The two notions are, of course, intimately connected, in that they both invoke a sense of ‘it doesn’t end here’. Additivity likewise seems to be involved in some attestations of Udihe *xai(si)*. Thus, in the texts I consulted, this expression not only figures in concessives proper, but it is also repeatedly attested as part of the apodoses of alternative concessive conditionals. These are a type of concessive conditionals that feature a disjunctive set of protases propositions (see HaspelmathKoenig1998). Example (198) is an illustration.

(198) Udihe

Context: a man has eaten from a tiger’s kill, but left two legs. He says to the tiger:

Ei zu:be bugdi-we sin-du ne-gi-e-mi, ali=de go:=ko
 this two leg-ACC 2SG-DAT put-ITER-PST-1SG when=FOC far=INDEF
da:=ka bi-mi xai o-lo eme-gi:, a-wa dig'a si.
 near=INDEF COP-INF still here-LOC come-ITER.IMP that-ACC eat.IMP 2SG
 ‘I put these two legs aside for you. Whether you walk far away or close to here, [just the same] come here and eat them.’

(NikolaevaEtAl2019)

Example (199), which can be read as additive or as marking concession, suggests that additive functions of *xai(si)* at least partially motivate its use in alternative concessive conditionals.

(199) Udihe

Context: once upon a time there was a Chinese tsar. He buried people alive.

Nuŋu-za se: i:ne-wene-mie bude-isi:-ni, buge-ini, e-si:-ni,
 six-ten year come-CAUS-INF die-PFV.CVB-3SG bury-3SG NEG-PST-3SG
bude, xai buge-ini.
 die still bury-3SG

When a person became sixty years old, he buried him, no matter whether he was dead or not. (lit. ... he died, he buried him, he did not die, he still/also buried him).’ (NikolaevaEtAl2003)

³⁰Bosque2016 speculates that further motivation might be found in the fact that *todavía* involves the universal quantifier *todo/toda*, which also figures in concessive expressions such as *con todo* lit. ‘with everything’.

3 Non-temporal uses

Additivity, but of the scalar kind, doubtlessly lies at the heart of the Spanish collocation *aun así*. Example (200) is an illustration; see Section 3.3.4 on *aún* as scalar additive ‘even’. That is, despite superficial differences, this collocation is fully parallel to English *even so*.

(200) Spanish

Aun así, no es suficiente.
 still so NEG COP.3SG sufficient
 Easy access to this technological resource facilitates its use in
 pedagogical practices. **Nonetheless, it is not sufficient.**
 (CORPES XXI, glosses added)

Not only additive functions can play into the development of STILL expressions as markers of concession. Thus, three of the relevant items lexicalize an exclusive sense ‘only’ (Section 3.4.2). These are Chamorro *ha*’, Chuwabo =*vi*, and Rapanui *nō*. Example (201) illustrates Chamorro *ha*’.

(201) Chamorro

Maseha un fa'håhaha *håo, ya~ya-hu* *håo ha’.*
 although 2SG make_into_what.CONT 2SG CONT~like-1SG.RL 2SG still
 ‘Even though you’re making yourself into something else, I’ll still like
 you.’ (Chung2020)

It is conceivable that a concessive reading can be derived from the exclusive function, namely by rendering alternative propositions which are more in line with the assumed incompatibilities false. Put differently, in examples like (201) there is one and only one outcome, no matter the circumstances. In lieu of data on the relative chronology of the three expressions’ individual functions, it might be that their exclusive and phasal polarity functions conspired towards the same outcome. Lastly, an exclusive function doubtlessly lies at the heart of the Rapanui concessive phrase *te me'e nō* ‘ART thing still/only’ , which is illustrated in (202a). This complex marker instantiates a productive construction *te N nō* ‘ART N still/only’ that signals an exception to some circumstance (Kieviet2017); see (202b) for an illustration.

(202) Rapanui

3.5.2.3 Concessive interjections

Introduction In Sections 3.5.2.1 and 3.5.2.2 I discuss concessive functions that involve complete clauses. In addition, STILL expressions, or collocations involving these, are also attested as concessive holophrases, such as in the English example (203).

(203) English

- A: *D'ya think she'll go back to work Kevin?*
 B: *No .. I don't think she will to be honest with you.*
 A: <sigh>
 B: *Still.*
 A: *I don't blame her.* (BNC KBC, cited in Lewis2019)

Of course, such elliptical concessives are by no means limited to STILL expressions. To give just one example, the very same use is found with German *trotzdem* ‘regardless’, illustrated in (204).

(204) German

- A: *Deine Schrift ist schwer zu lesen.*
 ‘Your handwriting is difficult to read.’

3 Non-temporal uses

B: *Was? Ich habe mir die allergrößte Mühe gegeben!*
 ‘What? I made the greatest effort possible!’

A: ***Trotzdem.***
 regardless
 ‘Regardless.’ (Funke, *Tintenherz*)

Distribution in the sample Table 3.13 lists the four expressions in my sample that are involved in a holophrastic concessive use. It is noteworthy that all attested cases stem from western Eurasia.³¹ Unsurprisingly, each of the expressions or phrases in question also has concessive functions in more saturated environments. From these, the interjective usages are clearly derived, at least in diachronic terms (see e.g. Lewis2019 on English *still*). With the exception of French *encore que*, all cases go back to the marking of the apodoses in a concessive construction. In what follows, I examine this predominant type first, and then turn to *encore que*.

Table 3.13: Concessive interjections

M.-Area	Language	Expr.	Collocation	Appendix
Eurasia	English	<i>still</i>		D.1.1.7.3
	French	<i>encore</i>	<i>encore que</i>	D.2.1.10.5
			<i>et encore</i>	D.2.1.10.5
	Hebrew (Mod.)	<i>sadayin</i>		D.4.1.6.2
	Spanish	<i>aún</i>	<i>aun así</i>	D.13.1.8.8

A closer look and discussion: interjections from concessive apodoses As I have just pointed out, the predominant case in my sample is an interjective use that derived from the marking of concessive apodoses. More specifically, this use can be traced back to the truncation of a pattern in which the expressions (or collocations) in question occupy the clause-initial position and are prosodically separated from the preceding clause as well as from the rest of their host clause.³² This pattern is illustrated in (205) for English *still*. A comparable example involving Modern Hebrew *sadayin* is found in (193) above.

³¹Outside of my sample, a parallel case is found in Catalan *i encara*, a cognate of French *et encore*; see PerezSaldanyaSalvador1995.

³²For the relevant facts, see DPDE, MosegaardHansen2008, Lewis2019, Ranger2018, TsirkinSadan2019 and VictorriFuchs1996.

3.5 Broadly modal and interactional uses

- (205) English

... *It is always the dregs of the population who show their patriotism by this sort of behaviour. Still, it is refreshing to see someone taking some sort of action.* (Lewis2019)

In the case of Spanish *aun así*, the use in question involves *aún* as a scalar additive operator (Section 3.3.4), i.e. 'still so > even so'. For an illustration of this collocation in a full-fledged concessive construction, see (200) above. Example (206) shows *aun así* as a holophrase.

- (206) Spanish

A: *Si fuese tan amable de ayudarme a ubicar.*
 'If you could be so friendly and help me know where I am.'

B: *¿El lugar? No le asigne ninguna importancia.*
 'The location? Don't give it any importance.'

A: ***Aun así.***
 still/even so
 'Still!' (CORPES XXI)

A closer look and discussion: an interjection from a postponed protasis Other than the cases I have discussed up to this point, the stand-alone use of French *encore que* goes back to ellipsis within a concessive apodosis, rather than within a protasis. However, although the relevant *encore que* clauses are semantically protases (i.e. they express an unfavourable condition), they are of the rectificational type and thus follow their apodoses. What is more, *encore que* tends to form a prosodic phrase of its own (MosegaardHansen2008; Morel1996; VictorriFuchs1996). That is, we find the same syntactic and prosodic conditions that facilitate truncation. Example (207) illustrates the interjective usage of *encore que*.

- (207) French

La fébrilité qui régnait en fin de semaine dernière rue des Italiens pourrait laisser croire à un proche dénouement de l'affaire.

'The feverishness reigning at the end of last week at the court house in rue des Italiens might lead one to expect that a solution to the matter was imminent.'

 case(M) ART.INDEF:SG.M climate(M) of manipulaten and of

3 Non-temporal uses

désinformation.

desinformation

‘Not necessarily! For this case has from the very beginning been characterized by a climate of manipulation and misinformation.’ (*Nouvel Observateur*, cited in **MosegaardHansen2008**, glosses added)

3.5.2.4 Counter-expectation

One expression in the sample, Mandarin Chinese *hái* (Appendix D.9.1.8.2), has a use in which it signals “the speaker’s incredulousness” and that “there is a gap between the situation described in the clause and the assumption or expectation held by him or other people.” (**BiqHuang2016**). This is illustrated in (208).

(208) Mandarin Chinese

Context: Speaker A is speaking about his diet in the Netherlands.

A: ... *xiànzài wǒ fēicháng xǐhuān chī qisi.*
‘... now I am extremely fond of cheese.’

B: *Nà nǐ hái xíguàn de zhēn kuài a!*
that 2SG still habit ASSOC really real SFP
‘Well, in that case, you did get used to it really fast!’
(**Wiedenhof2015**)

A closer look and discussion The counter-expectation use of *hái* often goes together with other evaluative material. Thus, example (208) also features *zhēn* ‘really’, which is a common occurrence in this use, and the sentence-final particle *a* has been described as often contributing notions of surprise, as well (**HuangShi2016**). Example (209) is another illustration featuring *zhēn*, plus *kě* ‘indeed’ for additional emphasis.

(209) *Zhēn kě yóu qián, hái bù zǎo jiāo le?*
really indeed EXIST money still NEG early hand_over PFV
‘Si vraiment nous avions de l’argent, comment n’aurions- nous pas payé
plus tot? [If we really had the money, don’t you think we’d had paid
earlier?]’ (**Alleton1972**, glosses added)

Example (209) illustrates another point: according to **Alleton1972**, this use of *hái* is often presented as a rhetorical question and can therefore be paraphrased via *nándào* ‘by any chance, isn’t it possible that?’. While the exact pathway leading to the emergence of the counter-expectational function is unclear and deserving of a dedicated diachronic corpus study, its meaning contribution strongly

3.5 Broadly modal and interactional uses

points to *hái* in concessive apodoses (Section 3.5.2.2) as its origin.³³ The well-known tendencies for semasiological change (Section 1.6.2) suggest that this development involved the strengthening of the expressive contribution, i.e. the conflict between the situation depicted in the clause and the assumptions held by the speaker and/or hearer, to the detriment of the inter-propositional meaning element defining of the concessive use.

3.5.3 Other connective functions

In this subsection, I briefly turn to two other connective functions attested in my sample, namely Kekchí *toj* as a marker of exceptive protases ‘unless’ (Appendix E.5.1.6.2) and Classical Nahuatl *oc* as a causal connective (Appendix E.1.1.7.2).

Kekchí *toj* and protases of exceptive conditionals Example (210) illustrates the use of Kekchí *toj* as a marker of the protasis of an exceptive conditional ‘unless’.

- (210) Kekchí

Context: a hummingbird explaining why he does not want to give away his feathers.

T-in-kaamq rah (x)-b'aan ke toj t-in-b'at-e'q sa'
 PROSP-1SG-die CF POSS.3-because cold still PROSP-1SG-wrap-PASS PREP
x-noq'ul inup.
 POSS.3-thread ceiba

‘I will die of the cold unless I am wrapped in the bark of a ceiba tree.’
 (Kockelman2020)

This ‘unless’ function doubtlessly goes back to *toj* as a temporal delimiter ‘until’, illustrated in (211), with a mapping from times to possible worlds. In other words, the situation described in the apodosis obtains until the preventing condition is met, and defeasibly no longer after (Kockelman2020). The relationship to *toj* as a phasal polarity expression is thus an indirect one.

- (211) *Toj maak'a'-q chik in-k'as t-in-k'anjelaq.*
 still NEG.EXIST-NON.SPECIFIC more POSS.1SG-debt FUT-1SG-work
 ‘Until I no longer have debt I will work.’ (Kockelman2020)

³³This also seems to be the implicit assumption held by Alleton1972, who subsumes the concessive function under the counter-expectation one.

3 Non-temporal uses

Causal connective Classical Nahuatl *oc* forms part of a causal connective. This function is found in conjunction with the determiner *in* as a signal of subordination plus the expression *ic* ‘when’ Example (212) is an illustration.

(212) Classical Nahuatl

In *oc* *ic* *ti-tēpiltzin* ... *xi-m-imat-cā-nemi.*
 DET still when SUBJ.2SG-offspring SBJV-REFL-be_wise-LNK-live
 ‘Pues que eres bien nacido ... viue con cordura. [Since you are noble,
 live wisely]’ (Carochi1645, glosses added)

As Launey1986 points out, the causal function is clearly based on *oc* as a marker of simultaneous duration, a function illustrated in (213) and discussed in Section 2.5.3.1. It is therefore only indirectly related to *oc* as a phasal polarity expression. The development of the causal function clearly involves the well-established pathway from time to causality (e.g. KutevaEtAl2019). Nonetheless, it is remarkable, given that causal functions appear to be more commonly associated with ALREADY expressions, such as Spanish *ya* in (214).

(213) Classical Nahuatl

Mācamo xi-cōcoch-ti-ye-cān *in* *oc* *ic*

ya *que* *no hay más cuestión-es pendiente-s.*
 already SUBORD NEG EXIST more issue-PL pending-PL
 We can close the meeting, given that there are no more issues to be
 discussed.’ (RAEGramatica, glosses added)

3.5.4 Uses pertaining to non-realizations

Introduction Two sample expressions, Northern Qiang *tce-* and Barabayiiga-Gisamjanga Datooga *údu-*, have uses that pertain to the broader domain of non-realization (Appendices D.10.1.6.1, B.3.1.4.1). In what follows, I discuss each case separately.

3.5 Broadly modal and interactional uses

A closer look and discussion: Northern Qiang *tce*- and ‘almost’ The Northern Qiang expression *tce*- forms part of a collocational pattern that signals the near-attainment of some state-of-affairs ‘almost’. This bi-clausal construction is illustrated in (215).

- (215) Northern Qiang

a-zə tce-ŋua:-sə, qa i-pə-l ma-lə-jya.
one-CLF still-COP.PROSP-LNK.CF 1SG DIR-arrive-come NEG-able-ASP:1SG
'I almost couldn't return.' (LaPollaHuang2003)

As discussed by LaPollaHuang2003, the pattern in (215) is transparent to the largest degree. Thus, the linker *-sə* contributes the counterfactual meaning, whereas the contribution of *tce*- lies in its additive function (Section 3.3.1). In other words, the ‘almost’ reading goes back to ‘had it been a little more (like that)’. In this, the Northern Qiang construction is somewhat similar to the Modern Hebrew collocation *fod mešat* ‘still a little’ illustrated in (216), which also signals temporal proximity, albeit without the modal component, and where the phrase-internal position gives evidence that it goes back to the additive use of *fod*.

- (216) Modern Hebrew

hašáv-ti ki fod mešat ta-šazov et ha-ḥéder,
think.PST-1SG COMP still a_little 2SG.F-leave.FUT ACC ART.DEF-room
kol-kax hayu pane-ha mabi'ot tsaar u-ke'ev.
all-thus EXIST.PST.PL face-POSS.3SG.F express.PL.F anguish and-pain
'I thought that **soon** she would leave the room, so much did her face
expression her anguish and pain.' (Glinert1989, glosses added)

A closer look and discussion: B.-G. Datooga *údu*- as ‘not actually’ The Barabaiiga-Gisamjanga Datooga prefix *údu*- can mark the non-actualization of an anticipated past event when combined with negation. This is illustrated in (217).

- (217) Barabaiiga-Gisamjanga Datooga

[N-ì]née-k-ii d àbà híjí áa m-údú-qwáa-hiidu
ANT-3-close-INCH LOC here CONJ NEG-still-SUBJ.3-arrive.CAUS.VEN
'He approached here **but he didn't bring it.**' (Mitchell2021)

This non-happening use is restricted to telic predicates in the formally unmarked non-future tense. With atelic predicates, the combination of *údu*- and negation predictably yields the negative phasal polarity concept NO LONGER.³⁴

³⁴Telic predicates and affirmative polarity yield a near past, see Section 2.4.6.1.

3 Non-temporal uses

The most perspicuous explanation for the use I discuss here is hence a conventionalized mapping from times to possible worlds, in that the the factual world no longer aligns with that in which the situation in question was envisaged.

3.5.5 Interrogative functions

In this subsection, I survey a few pragmaticized and mostly language-specific uses that relate to interrogatives. In Section 3.5.5.1 I discuss French *encore* and Ket *hāj* as markers of a follow-up inquiries. In Section 3.5.5.2 I turn to the case of certain rhetorical questions featuring Mundang *bà*, as well as to German *noch* in ‘remind me again’ utterances.

3.5.5.1 Follow-up questions

Introduction Two expressions in the sample, French *encore* and Ket *hāj*, are used in interrogatives to mark a request for more information (Appendices D.2.1.10, D.7.1.5.1). Example (218) illustrates French *encore*. As in this example, *encore* is always dislocated to the right and often conveys a notion of annoyance at the need to ask again.

(218) French

- A: *Seigneur Aristote, peut-on savoir ce qui vous met si fort en colère?*
‘My Lord Aristote, may one know what makes you so angry?’

‘A subject that is as reasonable as can be.’
- A: *Et quoi, encore?*
and what still
‘And what IS that?’ (Molière, *Le mariage forcé*, cited in
MosegaardHansen2008, glosses added)

A closer look and discussion As MosegaardHansen2002 (MosegaardHansen2002, MosegaardHansen2008) and Vaelikangas1982 point out, right-dislocated *encore* is based on the same item in iterative function (Section 2.4.2.1) and involves a straightforward transfer from the propositional to the speech-act domain: “it suggests that the question ought to be unnecessary ... [and] focuses attention on the fact that a similar type of question has been asked at least once before” (MosegaardHansen2008). In other words, this is a textbook example of the tendency for meaning to become increasingly expressive (Section 1.6.2).

3.5 Broadly modal and interactional uses

The case of Ket *hāj* appears to be mostly parallel to the French one, except that this expression maintains its usual pre-predicate position. While there are no in-depth descriptions of *hāj*'s contribution to interrogatives, the item also has an iterative use, and Werner1997 consistently translates the relevant examples into German using *denn*, a marker commonly described as highlighting a follow-up question (e.g. Wegener2001). This interpretation is in line with the fact that the one contextualized example in the data marks a repetition of nearly the same question after an unsatisfactory first answer; see (219).

(219) Ket

- A: *Bil'ansän' di:m̥bes'in? Di l'gat u škɔladiŋal' di:m̥bes'in?*
 ‘Wer ist gekommen? Ob es Kinder sind, die aus der Schule gekommen sind? [Who has come? Will it be children, coming from school?]’
- B: *Bəŋ.*
 ‘Nein [No].’
- A: *Anet haj d-i-m̥-bes?*
 who still SUBJ.3-here-PST-move
 ‘Wer ist denn gekommen? [Who is it then, who just came?]’
- A: *Ka't h̥iy i:m̥bes'.*
 ‘Ein alter Mann ist gekommen. [An old man came]’
 (Werner1997, glosses added)

3.5.5.2 Other interrogative functions

In this subsection, I briefly discuss certain rhetorical questions in Mundang as well as the conventionalized use of German *noch* in ‘remind me again’ questions.

Rhetorical ‘still’ questions or Mundang *bàā* Mundang *bà* can be used in conjunction with the interrogative marker *nè* in a type of rhetorical question that signals that the addressee should not continue with whatever they are doing (Appendix B.9.1.4.1). In this function, the two items can merge into a portmanteau morpheme *bàā*, as shown in (220).

(220) Mundang

Mò dɔŋ yéb bāā?
 SUBJ.2SG do.IPFV work still.Q

‘Travailles-tu encore? ([Are you still working?] le locuteur sait que l'interlocuteur est en train de travailler et il lui demande s'il continuera

3 Non-temporal uses

avec le travail [speaker knows that the addressee is working and asks whether he will continue])' (Elders2000)

Of course, the meaning of Mundang *bāā* is mostly compositional, and it involves an obvious intersubjective inference. The reasons I follow Elders2000 in considering it a separate use are the formal irregularity and the apparent high degree of conventionalization of the deontic component.

'Remind me again' questions and German *noch* The German STILL expression *noch* frequently marks inquiries about information that was once known, but which the speaker has since forgotten or which is at least no longer immediately accessible to their mind (Appendix D.3.1.8.2). In such questions, *noch* can figure in the iterative collocation *noch (ein)mal* (Section 2.4.2.2), as in (221a). Alternatively, it surfaces in its bare form, which is particularly common in monological questions like (221b).

(221) German

- a. Context: A waiter has forgotten the orders of each person.
Was hat noch-mal jeder bestell-t?
 what have.3SG still-time everyone order-PTCP
 'Remind me again, what did each of you order?' (Sauerland2009)
- b. *...dann pflegte der Onkel das Lied von den heimatlosen Matrosen durchs Haus zu schmettern. Er hatte es einst auf seinen Seereisen gelernt.*
 '... the uncle then used to belt out the song of the homeless seafarer.
 He had learned it a long time ago during his sea voyages'
Wie hieß noch die zweit-e
 how be-called.PST.3SG still ART.DEF:NOM.SG.F second-NOM.SG.F
Strophe?
 verse(F)
 '[Asking himself:] How did the second verse go again?' (von der Vring, *Spur im Hafen*, cited in Iwasaki1977, glosses added)

The use of a collocation with an iterative meaning in (221a) is fairly unproblematic, and it is well-known to occur with other iterative markers such as Swedish *igen* in (222). What does, however, appear to be cross-linguistically uncommon is the use of bare *noch* in cases like (221b), given that this expression does not generally have a repetition-related function. As Iwasaki1977 discusses, the contribution of *noch* in such instances intuitively shows traces of phasal polarity,

3.5 Broadly modal and interactional uses

albeit in regards to the speaker's belief state rather than the proposition itself. In other words, *noch* can be understood as signalling the speaker's conviction that they should continue to be able to recall the information in question, although they no longer do. In fact, as Iwasaki1977 also points out, this is a manifestation of a common theme with temporal-aspectual adverbs in German. For instance, *gleich* 'immediately' has a very similar use of signalling impatience or frustration at not being immediately to recollect a piece of information; see (223).

(222) Swedish

Vat hette han igen?

what be_called.PST 3SG.M again

'What was his name, again?' (Vaelikangas1982, glosses added)

(223) German

Was hat er gleich ge-sagt-?

what have.3SG 3SG.M immediately PTCP-say-PTCP

'Remind me quickly, what was it he said?' (Duden, glosses added)

3.5.6 Exclamatory and directive functions

In this subsection, I survey a set of functions that relate to exclamations and commands. Similar to what can be seen for interrogative uses in Section 3.5.5, all of these are either highly language-specific or found with no more than two sample expressions each. In Section 3.5.6.1 I discuss Serbian-Croatian-Bosnian *još* and Modern Hebrew *sod* as integral parts of 'and how!' formulae. In Section 3.5.6.2 I turn to the use of Kalamang *tok* and Saisiyat *nahan* as markers of polite commands. In Section 3.5.6.3, I discuss a set of remnant uses, which involve German *noch* in lamenting exclamations, the same item in certain collocations that serve as boosters, as well as the case of Ewe *ga-*, which is a compulsory ingredient to negative commands. A common theme with all these cases, except for the German lamenting exclamations, is that they are only indirectly related to the same items as exponents of phasal polarity STILL.

Lastly, note that there are related uses that I address in more specific places. Thus, in Section 3.5.2.3 I discuss uses as concessive interjections, and for a discussion of Spanish *todavía* and French *encore* in counterfactual wishes and exclamations the reader is directed to Section 3.4.4.

3.5.6.1 'And how!'

Introduction Two expressions in the sample, Modern Hebrew *sod* and Serbian-Croatian-Bosnian *još*, are attested in fixed or semi-fixed collocations that serve

3 Non-temporal uses

as affirmative, reinforcing responses ‘and how!, very much so!’ (Appendices D.4.2.8.1, D.11.1.8.1). Example (224) is an illustration featuring Serbian-Croatian-Bosnian *još*.

(224) Serbian-Croatian-Bosnian

- A: *Ne spominji je već.*
 NEG mention.IPFV.IMP 3SG.ACC.F already
 ‘Don’t mention her anymore!’
- B: *Još kako ču je spominjati.*
 still how will.1SG 3SG.ACC.F mention.IPFV.INF
 ‘And how I will mention her!’ (HrWac 2.2, glosses added)

A closer look and discussion While in (224) Serbian-Croatian-Bosnian *još* goes together with *kako* ‘how’, the second constituent of the construction may also be the quantificational WH word *kaliko* ‘how much’, as shown in (225). This example illustrates another point: these collocations are commonly found in holophrastic or elliptical utterances.

(225) Serbian-Croatian-Bosnian

- A: *Ja sam njih upozorava-o.*
 1SG COP.1SG 3PL.ACC warn.PTCP-SG.M
 ‘I warned them.’
- B: *Još kaliko.*
 still how_much
 ‘Very much so!’ (HJP, glosses added)

A very similar instance is found in Modern Hebrew, in form of the collocation shown in (226) and listed by Glinert1976 (Glinert1976, Glinert1989), unfortunately without much additional description. In terms of their origins, these collocations doubtlessly build on *još* and *fod* in additive function (Section 3.3.1) and involve a transfer from the textual onto the intersubjective dimension of meaning. This interpretation finds support in the fact that Serbian-Croatian-Bosnian possesses synonymous forms *i te kako/i te koliko* lit. ‘and also how (much)’.

(226) Modern Hebrew

- Ve-fod ex!*
 and-still how
 ‘And how!’ (Glinert1989))

3.5 Broadly modal and interactional uses

3.5.6.2 Polite commands

Introduction Two expressions in the sample, Kalamang *tok* and Saisiyat *nahan* (Appendices F.7.1.7.1, F.16.1.6.1), have a function of mitigating commands. The examples in (227, 228) are illustrations.

(227) Kalamang

Ma he min ma he mat nawarar ka tok parar-te.
 3SG already sleep 3SG already 3SG.OBJ wake_up 3SG still get_up=NON.FIN
 'He slept, [I] woke him up, "You get up! (before you do anything else)"'
 (Visser2021a; Eline Visser, p.c.)

(228) Saisiyat

Si'ael nahaen.

eat.IMP still

'Chi gè dongxi (zài zǒu) ba! / Come have a bite (before you leave)!'
 (Huang2008)

A closer look and discussion As hinted at in the free translations of (227, 228), this use can be traced back to the 'first, for now' function of both items (Huang2008; Eline Visser, p.c.), and which I discuss in Section 2.4.5.1. Like the uses addressed in the preceding subsections, it clearly instantiates the tendency of meaning to become more intersubjective, in this instance functioning in the realm of negative politeness (see BrownLevinson1987). More specifically, it can be explained by recourse to two mutually compatible pathways and politeness strategies. In the first of these, the demand on the addressee and the threat to their negative face is reduced by asking for an action that takes place only for a limited amount of time. The second scenario, suggested by Huang2008 for Saisiyat *nahan*, stresses the sequential component of the 'first, for now' use. By placing the demand in a succession of events, the speaker acknowledges that the addressee has other things to do and thereby effectively plays a variation on BrownLevinson1987's (BrownLevinson1987) strategy to "admit the impingement".

3.5.6.3 Other exclamatory/directive functions

In this subsection I briefly turn to some item-specific exclamatory and directive functions. I first discuss the use of German *noch* in lamenting exclamations. Afterwards I turn to the same item in certain collocations that serve as pragmatic boosters. Lastly I address the compulsory use of Ewe *ga-* in prohibitives.

3 Non-temporal uses

Lamenting exclamations with German *noch* German *noch* has a strongly conventionalized use in exclamations of the type illustrated in (229). As in this example, these exclamations invariably feature the verb-second order characteristic of declarative clauses (Appendix D.3.1.8.3). On the meaning side of things, they feature contrastive topics and convey emotive notions such as lament or woefulness (e.g. that the good times are over). At the same time, they serve to invite agreement from the hearer (Duden).

- (229) German

Das war-en noch Zeit-en!
3SG.N COP.PST-3PL still time-PL

‘Those were the days!’ (MetrichFaucher2009, glosses added)

Expressive notions notwithstanding, the contrast between persistence of an earlier state and its subsequent discontinuation remains visible in (229). In cases like (230), on the other hand, the (inter-)subjective meaning dominates (MetrichFaucher2009). However, such instances do provide hints of the marginality sense (Section 3.2), such as ‘him’ being the last outpost of reliability.

- (230) German

Auf ihn kann man sich noch verlass-en!
on 3SG.ACC.M can.3SG IMPR REFL.3 still relie-INF

‘At least *he* is reliable (if no one else)!’ (MetrichFaucher2009, glosses added)

German *nochmal*: From repetition to booster German *noch*, in the iterative collocations *nochmal* (and variants; Section 2.4.2.2), can serve as a booster in directive speech acts, exclamations of frustration, and the like (Appendix D.3.1.8.4). Example (231) is an illustration.

- (231) German

Jed-er Mensch ... überhaupt: jed-e Kreatur ...
every-NOM.SG.M human(M) generally every-NOM.SG.F creature(F)
man muß doch an etwas glaub-en in der
IMPR must.3SG DM at something believe-INF in ART.DEF:DAT.SG.F
Welt, verdammt noch-mal!
world(F) damnit still-time

‘Every person, more generally, every creature ... you need something to believe in, Goddamnit!’ (Sparschuh, *der Zimmerspringbrunnen*, glosses added)

3.5 Broadly modal and interactional uses

In all likelihood, this function is mediated by an application of the collocation's iterative meaning to the speech-act level, as in (232). The latter usage pattern is also attested for the equivalent French collocation *encore une fois*, as in (233), where it, however, does not appear to have generalized to the same degree as in German.

(232) German

- Noch-mal: du soll-st deinen Müll nicht einfach in still-time 2SG should-2SG POSS.2SG:ACC.SG.M trash(M) NEG simply in die Landschaft werf-en!*
 ART.DEF:ACC.SG.F landscape(F) throw-INF
 '[I'm telling you] again: don't just throw your trash into nature!'
 (personal knowledge)

(233) French

- Encore une fois, rest-ez calm-es.*
 still ART.INDEF:SG.F time(F) stay-IMP.PL quiet-PL
 (I'm saying it) again, be quiet! (Borillo1984)

Ewe *ga-* and prohibitives The Ewe STILL expression *ga-* is compulsory in negative commands (Appendix B.6.1.5.1). This is illustrated in (234).

(234) Ewe

- Me-ga-dzró nú o.*
 NEG.2SG-still-desire thing NEG
 'Do not crave for things.' (Ameka1991)

As pointed out before me by Ameka1991 and Westermann1907, the prohibitive use is clearly motivated by *ga-* as iterative 'again' (Section 2.4.2.1), as well as by the same item forming part of the expression for NO LONGER (which ultimately goes back to marking disrepetition). It is safe to assume that its employment in prohibitives started out with control predicates and commands to either not repeat an action, or to stop one, and that a high type frequency ultimately leading to semantic bleaching.

4 Conclusions and outlook

In the preceding chapters, I have surveyed the different functions that expressions for the phasal polarity concept **STILL** have in the languages of the world. I defined this concept as combining the notion of persistence with the evocation of an alternative discontinuation (Section 1.4), and based my survey on a global sample of 76 languages from 45 distinct phyla (Section 1.5.1).

In Chapter 2 I cast the spotlight on uses with a time-related core of meaning. I started with an examination of a set of uses that lie on the borderline between the concept of **STILL** and functional extensions (Section 2.2). This included an in-depth discussion of the use of **STILL** expressions in contexts of scalar variables (e.g. ‘still ... left’, ‘still only ...’), the alleged status of which as a distinct function had been the subject of a heated debate during the first wave of research on phasal polarity; see below. I then turned to uses of **STILL** expressions that infringe on the territory of other phasal polarity concepts (Section 2.3), namely the signalling of **NOT YET** without a negator and the phenomenon of interrogative ‘*yet*’. Afterwards I survey functions that lie outside the realm of phasal polarity altogether. These encompass various kinds of adverbial modifications (Section 2.4), such as future-oriented ‘eventually’, iterative/restitutive ‘again’, or the construal of a situation as precedential or preliminary ‘first, for now’, to give just a few examples. Lastly, I examined several functions of **STILL** expressions in which they modify a temporal frame setter (Section 2.5), for instance scalar additive uses specialized for temporal foci (i.e. ‘as late as’, ‘as early as’, ‘as far removed as’) or the marking of simultaneous duration ‘while’.

As can be gathered, **STILL** expressions cover a broad spectrum of time-related functions. Several of these may even appear contrary at first glance, such as ‘first, for now’ vs. ‘eventually’. In some instances, this fact can be traced back to each function in a pair sharing a common denominator with one rather than the other meaning components of **STILL**. Thus, the ‘first, for now’ use and the phasal polarity concept both evoke a contrast between the time under discussion and a possible subsequent change (Section 2.4.5.1). The ‘eventually’ use, on the other hand, profiles the notion of continuity with preceding developments (Section 2.4.4; also see below). In other cases, such seemingly opposite functions have their roots in different domains of operation. For instance, **STILL** expressions marking ‘as late

4 Conclusions and outlook

Table 4.1: Most common temporal and aspectual uses

Function	Macro-areas	Languages	Expressions	Discussed in
NOT YET without negation	6	22	22	Section 2.3.1
Repetition	6	16	17	Section 2.4.2.1
Prospective 'eventually'	4	14	14	Section 2.4.4

as' go back to equating the the time under discussion with an advanced runtime of the situation depicted in the clause (Section 2.5.2.3). A structurally similar function, on the other hand, often suggests earliness through stressing the persistence of the temporal frame itself and hence the non-attainment of later times (Section 2.5.2.2).

In terms of frequency and distribution, some time-related functions are limited to individual sample expressions and languages, such as Kekchí *toj* as temporal 'until' (Section 2.5.2.1). Many others are found across linguistic and/or geographic boundaries, although their recurrent nature has often gone unnoticed. For instance, the recruitment of STILL expressions in near past 'have just Verb-ed' constructions is attested for unrelated languages from distant parts of the world (Section 2.4.6.1), but has only received scant attention thus far, always limited to descriptions of individual cases. Which functions are the most common is somewhat dependent on where to draw the line. As alluded to above, the first wave of research on phasal polarity saw an intense debate about whether the use of the relevant expressions in the contexts of scalar variables (e.g. 'still ... left', 'still only ...') is to be understood as an instantiation of a distinct scalar function. If the question is answered positively, then this would constitute the single-most common functional extension in my sample. However, based on my examination of the sample data, and elaborating on arguments brought forward by *vanderAuwera1991BeyondDuality* (*vanderAuwera1991BeyondDuality*, *vanderAuwera1993Garrido1992*, and *MosegaardHansen2008*, I reasoned that there is no principled need for stipulating a distinct scalar function (Section 2.2.2). Against this backdrop, Table 4.1 lists the three most common temporal-aspectual uses in my sample. Given their prominent status, it is worthwhile briefly summarizing a few key points as they relate to each of them.

The first use in Table 4.1, the marking NOT YET in the absence of a negator, is doubtlessly motivated by the fact that STILL and NOT YET are "exactly the same ... retrospectively continuative and prospectively geared towards possible change" (*vanderAuwera1998*), the sole difference lying in polarity. On a more fine-grained level, this use comes in several overarching types (also see

PersohnNotYet). The first type is characterized by contexts lacking an overt predicate. This often involves disjunction, for example in polar questions that follow a '(already) or still > (already) or not yet' pattern. Here, the only meaningful interpretation of the **STILL** expression is in relation to the negative member of a pair of propositions. In other cases, context can be said to strongly favour a negative reading. In a second type of **STILL** as **NOT YET**, an expression goes together with a less-than-finite and/or dependent predicate. This finds a straightforward explanation in a conventionalized inference from a persistently pending situation to a continuing negative state (as suggested before me by **Gueldemann1996**, **Gueldemann1998**; **Nurse2008**; **VeselinovaDevos2021**). In yet a third type, polarity depends on the situation's internal temporal structure. Here, a motivated explanation can be found in the combinatory possibilities and/or possible readings of different actional classes with the notion of persistence, in conjunction with particularities of the respective tense-aspect systems. In a fourth type, an expression's function as affirmative **STILL** or negative **NOT YET** is determined by its position in the clause. This pattern is rare and only attested in Alor-Pantar, where comparative evidence points towards the erosion of an embracing pattern of negation as its source. Lastly, **STILL** as **NOT YET** without a negator was shown to play a role in the history of Thai *yan* as interrogative 'yet' (Section 2.3.2), and it was also observed in temporal clauses of precedence (Section 2.5.3.3).

Moving on to repetition-related uses, these share an obvious common denominator with phasal polarity **STILL** in the notions of continuity and identity, the main difference here lying in the presence vs. absence of temporal gaps (**vanBaar1997**; **SchultzeBerndt2002**; **TovenaDonazzan2008**; among many others). Given these similarities, it comes as no surprise that diachronic links in either direction are attested. Furthermore, the combination with wide-scope negation, yielding **NO LONGER**, is likely to have played a role in the diachrony of at least some of the relevant expressions. On a more fine-grained level the sample data point to a greater affinity between phasal polarity **STILL** and iteration (e.g. 'call again') than restitution (e.g. 'close the door again'), counter to what is claimed in **vanBaar1997**'s (**vanBaar1997**) seminal study of phasal polarity.

The third-most frequent time-related function is that of future-oriented 'eventually', as in German *Ich mach' das noch* 'I'll do it yet'. I argued that a motivated explanation for this use is best sought in diachrony. Elaborating on a proposal first made by **Abraham1977**, I suggested that it goes back to phasal polarity **STILL** in contexts of prospective or modal propositions. These 'can/must still do' combinations entail that a situation of the relevant type possibly/necessarily comes into existence before the end of the time under discussion, thereby opening the gates to a reanalysis of the **STILL** expression's contribution as 'eventually, before

4 Conclusions and outlook

Table 4.2: Most common non-temporal uses

Function	Macro-areas	Languages	Expressions	Discussed in
Additive	6	28	29	Section 3.3.1
Marginality	5	19 (18)	21 (20)	Section 3.2
Concessive apodoses	5	19 (15)	17 (13)	Section 2.4.4

Note. Values in parenthesis exclude borderline cases of **STILL** expressions and tentative categorizations.

it's too late'. Speaking of pathways of change, several of the historical scenarios put forward throughout Chapter 2 remain to be tested against diachronic data, where available. One such proposal, which owes much to **Mustajoki1988**'s (**Mustajoki1988**) synchronic discussion of Russian *eščë*, is that the 'as far removed as' function in Slavic and Modern Hebrew is rooted in a series of analogical context expansions that depart from the marking of a persistent time frame (Section 2.5.2.3).

In Chapter 3 I turned to non-temporal uses, which display a functional coverage no less diverse than that of their time-related counterparts. I began my examination with a discussion of **STILL** expressions as markers of an entity's marginal position on a scale or within a graded category (Section 3.2; also see below). I then turned to functions pertaining to focus quantification, first as markers of additivity and related notions (Section 3.3) and then as restrictive 'only', 'at least' operators (Section 3.4). One key finding here is the observation that the co-expression of phasal polarity **STILL** and exclusive 'only' is widespread across the macro-areas of Australia and Papunesia, more so than what has been observed previously (Section 3.4.2). Other functions discussed in Chapter 3 include a host of modal and strongly pragmaticized meanings (Section 3.5), such as uses pertaining to concessivity ('although', 'nonetheless') or ones relating to specific types of speech acts, to give a few examples. Just as in the realm of tempo-aspectuality, the various non-temporal functions are sometimes a near-mirror images of one another, such as in the case of additive vs. restrictive focus quantification. Also in line with a theme observed in Chapter 2, several of the non-temporal uses are highly idiosyncratic or attested for pairs of only two sample expressions. This is particularly true of speech-act specific functions, such as German *noch* in 'remind me again' questions (Section 3.5.5.2). Many others use, though, are common, with the three most frequent being listed in Table 4.2. Again, a brief discussion of each of them is in order.

As can be gathered from Table 4.2, the by far most common non-temporal use

of the sample expressions is that as additive ‘also, another’ . This is furthermore the single-most frequent of all functions in the sample, and its geographic distribution covers all six macro-areas. In the most abstract terms, this use shares a common denominator with phasal polarity **STILL** in the notion of inclusion (vanderAuwerla1993; Doherty1973; Noelke1983; among many others). Multiple types of usage-based bridges between the two functions are attested, involving both contextual ambiguity and metonymy. In addition, additivity shares some similarities with iterativity (Donazzan2008; MosegaardHansen2008; Lichtenberk1991; among many others), which was seen above to also be a common functional extension of **STILL** expressions. In addition, the additive use constitutes a link to several other functions, including that of a coordinator (Section 3.3.6) or the marking of repetitions together with an event quantifier (‘one more time > again’; Section 2.4.2.2). Interestingly, though, the sample data suggest that **STILL** expressions in additive function evolve along different lines from what is known about run-of-the-mill additive markers. This is perhaps an effect of the different and often complementary usage patterns (Section 3.3.8).

The second-most common non-temporal function is that of marking marginal membership on a scale or within a graded category (e.g. ‘a penguin is still a bird’). While this use involves a fairly simple metonymical transfer from times to other scales, it cannot be fully equated with phasal polarity. Thus, the two functions differ in important semantic characteristics, namely the orientation of the scale and the reality status of the subsequent discontinuation; these points of divergence are also sometimes reflected in grammar. What is more, the marginality function is not universal, as negative evidence from three sample expression shows. Lastly, marginality lies at the heart of several other functions, for instance French *encore* and Spanish *todavía* as ‘at least’ type markers in counterfactual conditional constructions (Section 3.4.4).

The third use in Table 4.2 is that of marking the apodoses clause in a concessive construction, as in *He studied hard and still he failed the exam*. This function instantiates a well-known trend for the wider field of expressions for continuity or coexistence to be co-opted as markers of concessive relationships (Koenig1985, KoenigConcessives). More specifically, it is safe to assume that the recruitment of **STILL** expressions to this function is rooted in the alignment of a position on a scale that is far removed from the origo (e.g. an advanced runtime, a marginal position) with less accessible possible worlds (EderlyCurco2016; Michaelis1993; and many others). This process may be aided by factors such as the presence of negation, and it can receive additional motivation through focus-related functions of the same expressions. Lastly, with several sample expressions the marking of concessive apodoses has given rise to a holophrastic interjective use (Sec-

4 Conclusions and outlook

tion 3.5.2.3), and it may also lie at the heart of Mandarin Chinese *hái* as a counter-expectation marker (Section 3.5.2.4).

To bring this book to a conclusion, by examining the different functions attested in my sample of STILL expressions, I hope to have laid the cornerstone for more cross-linguistic work on an area that is characterized by intriguing degrees of both convergence and diversity, and which had previously been approached predominantly from a language-specific angle.

Appendix A: Introduction

The following appendices contain a large part of the data that Chapters 2 and 3 are based on, and their inclusion is meant to increase transparency as well as to establish a reference resource for subsequent research on the subject matter (see Section 1.7.2 for more discussion). Unlike the main body of the book, the appendices are sorted by macro-area > language > individual expressions > attested functions.

Many of the individual language sections contain short introductory remarks that list out data sources other than descriptive materials (e.g. corpora or text collections), give background information on language structure that I deemed helpful for the interpretation of the examples, and/or acknowledge the help of individual scholars who provided personal communication, helped with glosses, etc. For each individual expression, the appendices start off with a “General information” subsection, which addresses the expression’s woordhood (morphosyntactic status) and, in many instances, also contains notes on formal variation, syntactic behaviour, and/or etymology. Subsequently, the expression categorization as an exponent of phasal polarity is summarized. This discussion follows the templatic structure given in Figure A.1.

- **References**
- **Specialization:** the evidence that the expression conforms to my definition (Section 1.4). Where the data are less than conclusive, an expression’s tentative inclusion is made explicit.
- **Polarity sensitivity:** whether the expression also participates in signalling NOT YET and/or NO LONGER
- **Pragmaticity:** the expression’s compatibility with the neutral and unexpectedly late scenarios of STILL.
- **(Syntax):** notes on the expression’s linear position and/or constituency.
- **(Further notes:)** possible usage restrictions, (in)compatibilities with certain inflections, the possibility to occur in elliptical utterances, etc.

Figure A.1: Templatic structure of initial overviews. List items in parenthesis are optional.

A Introduction

These background exposition are followed by (sub)sections for each of the attested function, in order of their discussion in Chapters 2 and 3. In instance, bibliographic references are given and the key findings therein are summarized. Where my own analyses of the data differ from existing descriptions, expand on them, or where analyses are of the tentative kind, this is again made explicit. The overviews are furthermore accompanied with illustrations from a wide array of sources. To allow for an easier interpretation of the data, I added context information to examples from actual discourse, together with glosses and, in the vast majority of instances, morpheme-by-morpheme segmentation.

Appendix B: Africa

B.1 Adama Fulfulde (adam1253, fub)

B.1.1 tawon

B.1.1.1 General information

- Form: there is a free variant *tawan*; in spoken registers, often reduced to *taw*.
- Wordhood: free morpheme.
- Syntax: fixed, clause-final position.
- Etymology: in all likelihood < Kanuri (Saharan) *dùwonyì* ‘first, before, still’.

B.1.1.2 As a ‘still’ expression

- Kingenheben1963, Kramer2021Adamawa and deWolf1995.
- Specialization: described in line with my definition by Kramer2021Adamawa.
- Pragmaticity: dependent on the specific variety; in the spoken variety that Kramer2021Adamawa terms “Adamawa Fula Communis”, it is restricted to the unexpectedly late scenario.
- Polarity sensitivity: inner negation yields NOT YET.

- (B.1) Context: a young man was asked whether he is the owner of a shop.

Kay mi derkeejo tawon.
no 1SG young man still
'No, I am still a young man.' (Kramer2021Adamawa)

- (B.2) *Min mbiibe ma yaake en donno haa Misra tawon.*

1PL.EXCL tell.PL OBJ.2SG CONJ 1PL.INCL LOC.ANT at Egypt still
'We told you (this), when we were still in Egypt.'
(Genesis 29: 9, cited in Kramer2021Adamawa)

- (B.3) *O yidi yah-go booko, ammaa o peeto tawon.*

NCL1 want.PFV go-INF school but NCL1 small still
'He wants to go to school but he is still (too) small.'
(Kramer2021Adamawa)

B Africa

B.1.1.3 Uses related toother phasal polarity concepts

B.1.1.3.1 Not yet

- In the data, this is only attested as a negative reply to polar questions.

- (B.4) *On 'don yaha ngesa hande naa? – A'a, tawon. Sey jango.*
NCL24 LOC go field today Q no still until tomorrow
'Are you (pl.) going to the field today? – No, [not] until tomorrow.'
(PelletierSkinner1981, glosses added)
- (B.5) *A danyi yaa-de? – Tawon!*
2SG succeed.PFV go-INF still
'Did you manage to leave? – Not yet!'
(deWolf1995, glosses added)

B.1.1.4 Broadly adverbial temporal-aspectual uses

B.1.1.4.1 First, for now

- Kingenheben1963, Kramer2021Adamawa, Taylor1953, Labatut1982 and deWolf1995

- (B.6) Context: Jacob has prepared a meal. Esau has returned hungry from his field and has asked for some of the food. Jacob answers:
Soorranam daraja afaaku ma hannde nden
sell.DAT:OBJ.1SG privilege firstbornness POSS.2SG today DEM
tawon.
still
'Sell me your birthright today first (i.e. then I will give you food).'
(Genesis 25: 31; cited in Kramer2021Adamawa)
- (B.7) *Sey to o wari tawan.*
until when/if NCL1 come.PFV still
'He must come first.'¹ (deWolf1995, glosses added)
- (B.8) Context: a response to a greeting.
Jam ni tawon.
fine thus still
'Fine for the moment.'
(PelletierSkinner1981, glosses added)

¹*Sey to* is a collocation meaning 'only if, under the condition that', see deWolf1995.

B.2 Bambara (*bam*, *bamb1269*)B.2 Bambara (*bam*, *bamb1269*)

Introductory remarks I am indebted to Klaudia Dombrowsky-Hahn for discussing Bambara data with me, and for helping with tricky glosses. According to **DombrowskyHahn2020** ([DombrowskyHahn2020](#), [DombrowskyHahn2021](#)), Bambara has four expressions for the concept of STILL. Only two of them, *túguni* and *bilen*, appear to have additional functions. Lastly, note that Bambara has a typical West African “factative” ([Welmers1973](#)) system, i.e. those verbs typically labelled as being “stative” verbs have an ongoing state reading in the perfective aspect as opposed to the reading of a bygone situation found with dynamic ones (see [HewsonBambara](#)).

B.2.1 *túguni*

B.2.1.1 General information

- Form: there is free variation *túguni*~*túgun*~*tún*.
- Wordhood: free morpheme.
- Syntax: fixed, clause-final position.
- Etymology: originally an iterative expression.

B.2.1.2 As a ‘still’ expression

- [Dumestre2003](#) ([Dumestre2003](#), [Dumestre2011](#)) and **DombrowskyHahn2020** ([DombrowskyHahn2020](#), [DombrowskyHahn2021](#)).
- Specialization: **DombrowskyHahn2021** identifies this marker as one that is in line with my definition.
- Pragmaticity: restricted to the neutral scenario.
- Polarity sensitivity: outer negation yields NO LONGER.
- Further note: rarely used as a STILL expression.

(B.9) *Nkà n̄ t'* à *d5n* *l'* à *f3* à *bé* *bálo lá tún*.
 but 1SG NEG.IPFV 3SG know INF 3SG say 3SG COP life at still
 ‘But I don’t know if she is still alive.’ ([DombrowskyHahn2021](#))

túguni.
 still
 ‘Cela ne se fera plus tant que moi Silimakan je serai vivan. [It will
 not ever happen again for as long as I, Silimakan, remain alive]’
 ([Dumestre2003](#), glosses added)

B Africa

B.2.1.3 Broadly adverbial temporal-aspectual uses

B.2.1.3.1 Iterative and restitutive

- Dumestre2003 (Dumestre2003, Dumestre2011) and DombrowskyHahn2020.
- This function is restricted to the perfective aspect with dynamic predicates.
- Both iterative (B.11–B.13) and restitutive uses (B.14, B.15) are available.
- Examples (B.12, B.15) illustrates that the iterative and restitutive readings survive under negation.
- In (B.13) *túgun* is translated as ‘aussi [also]’ by Dumestre2011. However, *túguni* does not appear do have an additive function outside this context, and a more literal translation would be ‘You spoke again, saying’ (Klaudia Dombrowsky-Hahn, p.c.). Note that *kó* is a defective verb, hence the absence of a perfective marker.

- (B.11) Context a fish spoke and was then cooked.

À y' i kánto *túguni*.

3SG PFV.TR REFL speak still

‘The fish spoke again.’ (DombrowskyHahn2020)

- (B.12) Context: a jinn came to a village each rainy season, but then...

Jíne-ke túnun-na. Kàbini ó ké-ra, mògɔ
jinn-man get_lost-PFV.INTR since ANAPH happen-PFV.INTR person
sí má jíne yé *túgun*.

no NEG.PFV jinn see still

‘It disappeared. Since this happened, nobody saw the jinn again.’

(DombrowskyHahn2020)

- (B.13) *I kó túgun kó*.

2SG say/QUOT still say/QUOT

‘Tu dis aussi que ... [You also said ...]’

(Dumestre2011, glosses added)

- (B.14) À yé syè mìnè k' à bila *túgun*.

3SG PFV.TR chicken catch INF 3SG let still

‘He caught the chicken and let it free again.’

(DombrowskyHahn2020)

- (B.15) Context: one person is about to smash a cane on another one’s head.

A third person has appeared and prevents this from happening.

Í bílo fila kórötälen bé cógo míñ à ní béré té jígin
2SG arm two raise.PART COP way REL 3SG and stick NEG.IPFV lower

B.2 Bambara (*bam*, *bamb1269*)

túgun dέ.

still INTENS

‘The way you hold your two arms, you will not lower the one holding the cane again.’ (Dumestre1979, cited in DombrowskyHahn2020)

B.2.2 *bìlen*

B.2.2.1 General information

- Form: there is free variation *bìlen*~*blèn*.
- Wordhood: free morpheme.
- Syntax: either in post-subject or clause-final position.
- Etymology: originally an iterative expression.

B.2.2.2 As a ‘still’ expression

- Dumestre2003, DombrowskyHahn2020 (DombrowskyHahn2020, DombrowskyHahn2021) and Vydrine2015.
- Specialization: described in line with my definition by DombrowskyHahn2021.
- Pragmaticity: *bìlen* on its own is only compatible with the neutral scenario; for the unexpectedly late scenario it needs to be combined with another STILL expression, *háli bì*; but see below on *bìlen* as a pro-sentence.
- Polarity sensitivity: outer negation yields NO LONGER.
- Further notes: as a STILL expression, *bìlen* appears to be restricted to the dialect of Segu. Furthermore, this seems to be an infrequent use. Dumestre2003 notes “l’usage comme interjection ... avec le sens de ‘à cette heure-ci’, ‘encore maintenant’ (avec une nuance de surprise et de reproche) [the usage as an interjection ... with the sense of ‘at this time, even now’ (with a surprised and reproachful nuance)].”

- (B.16) *Ń bέ ò báara lá bìlen.*
1SG COP ANAPH work at still
'I am still doing that work.' (DombrowskyHahn2020)

B.2.2.3 Broadly adverbial temporal-aspectual uses

B.2.2.3.1 Iterative and restitutive

- DombrowskyHahn2020 and Vydrine2015.
- Both iterative (B.17) and restitutive uses (B.19) are available; without further discourse context, (B.18) is ambiguous between the two.

B Africa

- According to **DombrowskyHahn2020**, iterative and restitutive readings are restricted to the perfective aspect with dynamic predicates. Example (B.18) suggests that they are also available with the locative copula.
- Like the use of *bilen* as STILL, the repetition function is described as infrequent.

(B.17) *À bilén bòli-lá kà n’ à fó à bámusò yé.*
 3SG still run-PFV.INTR INF come 3SG say 3SG mother to
 ‘She ran again to tell her mother about this.’
 (Vydrine2015, glosses added)

(B.18) *Í bé yän bilén.*
 2SG COP here still
 ‘Here you are again.’ (Vydrine2015, glosses added)

(B.19) Context: Context: Elephant said a forbidden word and immediately fell to the ground.
Sàma má wúli bilén.
 elephant NEG.PFV get_up still
 ‘Elephant did not get up again.’ (DombrowskyHahn2020)

B.2.2.4 Other functions

B.2.2.4.1 Emphatic negation

- Vydrine2015.**
- There is only one example of this use in the data consulted.
- It is unclear if this is a homophonous marker, and if not, how this function relates to the other functions of *bilen* ‘still’.

(B.20) *Ù má sɔ̄n kà dòn sánsarà kónɔ bilén.*
 3PL NEG.PFV agree INF enter cage inside still(?)
 ‘They definitely refused to enter the cage.’
 (Vydrine2015, glosses added)

B.2.2.4.2 Negative hypotheticals

- Dumestre2003** and **Vydrine2015**.
- In this function, which is described as archaic, *bilen* marks negative hypothetical conditionals (‘if not’). It is unclear whether this is the same marker as phasal polarity *bilen* ‘still’, and if so, how it relates to the other functions of this item.
- Syntax: invariabl in post-subject position.

B.3 Barabaiiga-Gisamjanga Datooga (tcc, dato1239)

- (B.21) *Í bilén máà dòn fána, í bέ tèrejuguya*
 2SG still(?) NEG.PFV enter also 2SG IPFV fate_of_sb_attracting_evil
sáyà kέ.
 death do
 'If you don't enter there, you will die ignominiously.'
 (Vydrene2015, glosses added)
- (B.22) *Í bilén bámanankàñ mén...*
 2SG still(?) Bambara_language understand
 'If you don't understand the Bamana language...'
 (Vydrene2015, glosses added)

B.3 Barabaiiga-Gisamjanga Datooga (tcc, dato1239)

Introductory remarks The data encompass the Barabaiiga-Gisamjanga varieties of North-Central Datooga (glottolog: nort3277).

B.3.1 údu-

B.3.1.1 General information

- Wordhood: bound morpheme (prefix).
- Form: There is a free variant *dúú-*.
- Etymology: unclear, but in all likelihood derived from a former biverbal construction (cf. Mitchell2021).
- Further note: in the context of *údu-*, tense-aspect inflection is reduced to a simple opposition of future vs. non-future, the latter being formally unmarked.

B.3.1.2 As a 'still' expression

- Rottland1982 (Rottland1982; Rottland1983) and Mitchell2021.
- Specialization: the description by Mitchell2021 meets my definition.
- Polarity sensitivity: outer negation yields NO LONGER.
- Pragmaticity: compatible with both scenarios.
- Further note: *údu-* as STILL is restricted to atelic predicates.

- (B.23) Context: about in-law avoidance. Women of child-bearing age strictly obey linguistic taboos, but their importance diminishes with age.

 ‘I’m back from firewood, dear; Have you finished milking?’

B: *G-út-tá-gáw-ii-s-chì.*
 AFF-still-SUBJ.1SG-milk-PLUR-APPL-AP
 ‘I’m still milking’ (Mitchell2021)

B.3.1.3 Broadly adverbial temporal-aspectual uses

B.3.1.3.1 Iterative (and restitutive?)

- **Mitchell2021**.
 - This function is restricted to telic predicates in the future tense (both affirmative and negated; exx. B.25, B.26) and to prohibitives (B.27).
 - **Mitchell2021** describes (B.25) as iterative: “there will be a repeated instance of a prior fire-lighting event” (**Mitchell2021**). Similarly, she paraphrases the negative future example (B.26) as “will not repeat/occur again” (**Mitchell2021**). In absence of further discourse context I cannot exclude a restitutive reading i.e. ‘relight the fire’, ‘come back’.

- (B.25) *G-ày-g-úd-êe-gwèarsíina* *gichá?*
 AFF-FUT-AFF-still-SUBJ.1PL-light_fire.APPL again

AFF-still-SUBJ.1SG-eat-PLUR-APPL-ANTIP

i. 'I've just eaten [something].'

ii. 'I'm still eating.' (Mitchell2021)

B.3.1.4 Broadly modal and interactional uses

B.3.1.4.1 Non-happening

• Mitchell2021.

- This function is restricted to telic predicates in negated non-future forms.
- This likely goes back to NO LONGER, via a mapping from times to possible worlds (a predicted course of events ceases to be true).

(B.31) *[N-i-]néek-íid àbà híji áa m-údú-qwáa-híidu*

ANT-3-close-INCH LOC here CONJ NEG-still-SUBJ.3-arrive.CAUS.VEN

(B.32) *M-údú-qà-m*

NEG-still-SUBJ.3-die

'S/he didn't actually die.' (Mitchell2021)

B.4 Bende (bdp, bend1258)

Introductory remarks Bende has a fairly typical Narrow Bantu noun class system. I have glossed the individual classes as NCL 'noun class' plus roman numeral, following the common Bleek-Meinhof system.

B Africa

B.4.1 *syá-*

B.4.1.1 General information

- Wordhood: bound morpheme (verb prefix).
- Form: there is a free variant *sí-* in some functions.

B.4.1.2 As a ‘still’ expression

- Abe2015 (Abe2015, Abe2016).
- Form: also in the variant *sí-*.
- Specialization: the description by Abe2015 meets my definition.
- Polarity sensitivity: does not appear to combine with negation.
- Pragmaticity: no conclusions possible, based on the available data.
- Further notes: *syá-* as an exponent of STILL frequently occurs with copula *l* plus an inflected predicate (B.34). With inchoative lexical verbs, *syá-* is compatible with the perfective aspect inflection, yielding a persistent state (B.35).

(B.33) *Li-syá-lí=ko*
SUBJ.NCL5-still-COP=NCL17(LOC)
(‘The sun) is still there. (a greeting in daytime)’ (Abe2015)

(B.34) *Tu-syá-lí* *tu-líkú-lyá.*

B Africa

B.5 Chuwabu (chw, chuw1238)

Introductory remarks Chuwabu has a fairly typical Narrow Bantu noun class system. I have glossed the individual classes as NCL ‘noun class’ plus roman numeral, following the common Bleek-Meinhof system.

B.5.1 =vi

B.5.1.1 General information

- Wordhood: bound morpheme (enclitic).
- Syntax: attaches to its focus; as a STILL expression, the host is the predicate.
- Etymology: unknown, but similar to *viina* ‘also’, which is involved in the expression of NO LONGER.

B.5.1.2 As a ‘still’ expression

- Guerois2015 (Guerois2015, Guerois2021).
- Specialization: the discussion by Guerois2021 gives a decent indication that this marker conforms to my definition. Further, albeit indirect, evidence comes from the robustly attested STILL-restrictive polysemy (Section 3.4.2).
- Pragmaticity: compatible with both scenarios.
- Polarity sensitivity: inner negation yields NOT YET.

(B.44) Context: Ddoolrinddo has been killed by her sister. She has turned into a singing flower. People hear her singing. Some time later:
Ddóólríndd’ óó-now-íibá=vi.

B.5.1.5 Broadly modal and interactional functions**B.5.1.5.1 Concessive apodoses**

- Guerois2021.
- This function only obtains in the future tense. There is only one example in the available data, which involves the apodoses of an alternative concessive conditional. The concessive reading might go back to =vi as STILL, but could also be motivated by its restrictive function (Appendix B.5.1.4.1), i.e. by emphasising the identity of outcome in both possible scenarios.

B.6 Ewe (ewe, ewee1241)

 is still going to die.’ (Guerois2021)

B.6 Ewe (ewe, ewee1241)

B.6.1 *ga-*

B.6.1.1 General information

- Wordhood: bound morpheme (prefix).
- Etymology *<gbɔ~gba* ‘come back, return’.

B.6.1.2 As a ‘still’ expression

- Ameka2008, Rongier2015 and Westermann1905; further discussion throughout vanBaar1997.
- Specialization: identified as a STILL expression by vanBaar1997
- Polarity sensitivity: outer negation yields NOT YET.
- Pragmaticity and further note: *ga-* as STILL often co-occurs with *ko* ‘just’ (B.53). According to vanBaar1997 *ko*, or its reduplicate *kokooko* (B.55, B.56) is compulsory in the unexpectedly late scenario.
- Further note: all examples of *ga-* as STILL in the literature involve a copula.

- (B.53) *É-ga-le* *aha* *no-m* *ko.*
 3SG-still-LOC.COP alcohol drink-PROG only
 ‘He is still drinking alcohol.’ (Ameka2018, cited in Kramer2021b)

B.6.1.5 Broadly modal and interactional functions

B.6.1.5.1 Prohibitives

- Ameka1991 and Westermann1907.
- *Ga-* is a requisite part of prohibitives.
- As both Ameka1991 and Westermann1907 point out, this is motivated by *ga-* in its iterative function (Appendix B.6.1.3.1) and the marking of NO LONGER, which builds on the latter.

- (B.65) *Me-ga-dzró nū o.*

B.7 *Kaba (sbz, sara1319)*B.7.1 *bbáy*

B.7.1.1 General information

- Form: also transcribed as *báy*.

B Africa

- Wordhood: independent grammatical word, invariable.
- Syntax: fixed, clause-final position.

B.7.1.2 As a ‘still’ expression

- Keegan2014, Moser2004 and MoserDingatoloum2007.
- Specialization: examples (B.67–B.70) give a good indication that *bbáy* conforms to my definition. For instance, in (B.67), it not only triggers the presupposition that Enjamgotoje was at home before, but also introduces a dynamic perspective towards his return (i.e. him no longer being at home). Similarly, in (B.68) *bbáy* evokes an alternative scenario: if the drum were no longer with the corpse, there would be no reason to complain.
- Pragmaticity: the available data allow for no conclusions.
- Polarity sensitivity: inner negation yields NOT YET.
- Further note: ex. (B.70) illustrates *bbáy* under a verb of manipulation.

(B.67) Context: the opening lines of a narrative.

Esú dé kà Enjàmgòtòje d-îya kùla, ngà kùla lè

B.7.1.3 Broadly adverbial temporal-aspectual uses

B.7.1.3.1 Iterative and restitutive

- Moser2004.
- Iterative readings are illustrated in (B.71, B.72). Examples (B.73, B.74), both of which describe the same situation, are clear cases of a restitutive reading. Example (B.75) also appears to be restitutive. Note that it includes a verb verb *tél* 'return', which might be (partially) responsible for this interpretation.
- The iterative use is also apparent in the reduplicated ideophone *bbáybbáy* 'repeated action' (MoserDingatoloum2007).

- (B.71) *ʃ-à kòò nàa bbáy á ma!*

‘Before it will also cause the fight to start again.’ (Moser2004)

B.7.1.3.2 Prospective ‘eventually’

- In (B.76–B.78) *bbáy* refers to eventualities that are yet to happen.
- While (B.76, B.77) both involve proverbs, (B.78) and the available data on cognates of *bbáy* in other Sara languages indicate that this use is more productive. See, for instance, the examples throughout Keegan2014, Thayer1978 and Vandame1963 on *báy*~*bí* in Kaba’s closest relatives Ngambay and Laka, as well as Palayer1989 (Palayer1989, Palayer1992) on Sar *báy*.

(Moser2004)

B.7.1.3.3 Sequencing ‘and then, afterwards’ (?)

- MoserDingatoloum2007.
- MoserDingatoloum2007 list *ensuite* ‘afterwards’ and *puis* ‘then’ as senses of this item. This could refer to the prospective ‘eventually’ use of *bbay* (Section 2.4.4, Appendix B.7.1.3.2), but may also be indicative of a sequencing function. While there are no clear-cut instances of the latter in the data consulted, such a use is undoubtedly found with the cognate cognate expression *báy~bí* in Kaba’s very close relatives Ngambay and Laka (B.79–B.81). An example like (B.81), featuring the future tense, could be read as both ‘and then’ or ‘eventually’.

B.7.1.4 Additive and related functions

B.7.1.4.1 Additive

B Africa

- Moser2004.
 - Moser2004 lists ‘more’ as one of the senses of *bbáy*. The only clear-cut example of this is (B.82), which is hard to separate from an iterative reading (‘give us water again, please’). However, additive uses are clearly attested for the cognate expression *báy- bí* in Kaba’s very close relative Ngambay (B.83).

SUBJ.2.give-MOD-PL-OBJ.1PL water still

‘Give us some more water please.’

‘Mbawwala ira avec moi. — Moi aussi! [Mbawwala will go with you —

Me, too' (Vandame 1963, glosses added)

B.8 Manda (mgs. mand1423)

Introductory remarks I am indebted to Rasmus Bernander for discussing Manda data with me, and for eliciting additional examples. Note that Manda has a typical Narrow Bantu noun class system. Noun class prefixes in the examples are glossed as NCL for ‘noun class’, together with an Arabic numeral that follows the common Bleek-Meinhof system of referring to Bantu noun classes.

B.8.1 (a)kona

B.8.1.1 General information

- Form: there is variation (partially morphophonemic, partially free) between forms with and without the initial vowel segment.
 - Wordhood: intermediate, auxiliary-like element that requires subject marking.

B.8.1.2 As a ‘still’ expression

- Bernander2017 (Bernander2017, Bernander2021)
 - Specialization: described in line with my definition; see especially Bernander2021.
 - Pragmaticity: compatible with both scenarios.
 - Polarity sensitivity: inner negation yields NOT YET, but this is uncommon, the normal choice being (a) *kona* plus infinitive (Appendix B.8.1.4.1). NO LONGER is expressed via negation plus *kávíli* ‘again’.

B.8 *Manda* (mgs, mand1423)

- Further note: compatible with the perfective aspect in a stative reading (B.85).

- (B.84) *N-ákóna* *ku-Songéa, kóma ni-páng-i'*

fi-datu.

NCL8-three

‘Me, I’ve still only got three.’ (Rasmus Bernander, p.c.)

B.8.1.3.2 Scalar contexts, soon: (a)*kona* LOC-*chokópi*

- Bernander2021).
- This function occurs in collocation with *chokópi* ‘little’ marked for a locative class (usually NCL 16) plus the corresponding subject agreement.
- This is clearly an extension of a scalar use (i.e. ‘little [time] still [left] > ‘soon’);; also cf. Swahili *bado kidogo* ‘still a bit, not quite yet [lit. still a little]’.
- Syntax: always follows the foregrounded verb, thus occupying (what in a single clause would be) the typical adverbial position. As Bernander2021 points out, together with the restriction to locative marking, this can be taken as an indication for the construction’s petrification and reanalysis as an adverbial.

(B.90) *Ya-u-sóv-i p-ákóna pa-chokópi.*
FUT-SUBJ.NCL14-be_lost-FUT SUBJ.NCL16(LOC)-still NCL16(LOC)-little
‘It will **soon** be lost (the flour) (lit. it will be lost, it is still a little’).
(Bernander2021)

B.8.1.4 Uses related to other phasal polarity-concepts

B.8.1.4.1 Not yet

- Bernander2017 (Bernander2017, Bernander2021)
- This function occurs in the following contexts:
 - With an infinitival complement, as in (B.91, B.92); this NOT YET construction can also mark a temporal clause of precedence (‘not yet *p, q*’ = ‘before *p, q*’).
 - In the absence of an overt predicate. This encompasses questions following a ‘already or still’ > ‘already or not yet’ pattern (B.93) and negative one-word replies (B.94). Note that (a)*kona* can also serve as an elliptical affirmative answer, as in (B.86) above. Closely related to disjunctive questions is the use as a pro-predicate in contexts suggesting a polarity contrast; see (B.95).

B.8 *Manda* (*mgs*, *mand1423*)

- (B.91) Context: My God, I have waited for Michael for half an hour now.

B.9 Mundang (mua, mund1325)

B.9.1 *bà*

B.9.1.1 General information

- Wordhood: free morpheme.
- Form: an merge with interrogative *nè* yielding *bàā* (Appendix B.9.1.4.1).
- Syntax: invariably in clause-final position.

B.9.1.2 As a 'still' expression

- Elders2000.
- Specialization: Elders2000's description meets my definition.
- Pragmaticity: According to Elders2000, *bà* invariably construes a situation as unexpectedly late (hence his label "tardatif"). It is, however, not entirely clear whether this is supported by the data, or rather a theory-driven conclusion. Elders2000 references Schadeberg1990, who considers counter-expectation to be an inherent component of STILL — see vanderAuwera2021 for a recent criticism. Most French translations of examples feature both *encore* and *toujours*. This fact and examples like (B.99) suggest that *bà* is compatible with the neutral scenario, as well.
- Polarity sensitivity: inner negation yields NOT YET.
- Further note: *bà* is compatible with the anterior aspect when the latter is combined with the so-called "convictif" *ròò*, a type of modal marker with an inter-subjective component (see Elders2000). This collocation gives a reading of a persistent result state, as in (B.100).

- (B.98) *Bwàm tɔ̄-n* *bà.*

leave ANT MOD still

'Il est parti pour l'instant/Il est toujours absent [He is still gone] (son retour immédiat proche est attendu [his immediate return is expected])' (Elders2000)

B.9.1.3 Broadly adverbial,temporal-aspectual uses

B.9.1.3.1 Prospective 'eventually'

- Elders2000.

- This function obtains with the optative and potential mood inflections of the verb, but apparently not with the dedicated future forms (which denote more certain intentions or predictions; see Elders2000). However, judging from Elders2000's description, these collocations do not yield necessarily yield modal notions (e.g. of a persistent possibility).

(B.101) *Mè kó-mò kà píl bà.*

SUBJ.1SG see-OBJ.2SG:TOT PREP ahead still

SUBJ.2SG:OPT enter.OPT come.IPFV still

'Tu entreras plus tard... (on te dis d'attendre et après tu as le droit d'entrer) [You will enter later (we tell you to wait and then you have the right to enter)]' (Elders2000)

B.9.1.3.2 Sequencing 'and then'

- Elders2000.

- This function obtains in a bi-clausal pattern. The first clause, which may be a subordinate clause (B.104, B.105) or a coordinate clause (B.106) describes a prerequisite for another situation to obtain. The latter is depicted in the second clause, which features *bà*. The second clause (or a clause it governs) often additionally includes a form of *tìŋ* 'start', as in (B.105).

B Africa

- All examples in **Elders2000**'s grammar feature non-actualized situations (future events or commands). This, and the notion of a pending, later event suggest a link to the prospective 'eventually' function (Appendix B.9.1.3.1).

B.9.1.4 Broadly modal and interactional functions

B.9.1.4.1 Interrogatives with *nè*

- **Elders2000**.
- This function obtains in combination with interrogative *nè*. The two markers can optionally merge into a portmanteau-morpheme *bàā*, as in (B.107).
- This is a fairly transparent use, an indirect way of signalling that the addressee should not continue with whatever they are doing.
- Only one example (B.107) is given in **Elders2000**'s grammar.

(B.107) *Mò dòŋ yéb bāā?*
 SUBJ.2SG do.IPFV work still.Q
 'Travailles-tu encore? ([Are you still working?] le locuteur sait que l'interlocuteur est en train de travailler et il lui demande s'il continuera avec le travail [speaker knows that the addressee is working and asks whether he will continue])' (Elders2000)

B.10 Nyangbo (*nyb*, *nyan1302*)B.10 Nyangbo (*nyb*, *nyan1302*)

Introductory remarks I am indebted to James Essegbe for sharing and discussing unpublished Nyangbo data with me, as well as for helping with several glosses. Note that Nyangbo has a so-called “factative” system typical of West African languages, in which the formally unmarked paradigm of the verb has a reading of a past event with dynamic verbs and a present state reading with those verbs commonly deemed to be stative.

B.10.1 *ka-*

B.10.1.1 General information

- Form: subject to vowel harmony.
- Wordhood: bound morpheme (verb prefix).

B.10.1.2 As a ‘still’ expression

- Essegbe2012 (Essegbe2012, Essegbe2019).
- Specialization: examples like (B.108–B.110) give a fairly good indication that this marker conforms to my definition. For instance, in (B.108) the third’s friend persistent state of being at home is framed against the assumed alternative, namely that he is on his way to meeting the other friends (i.e. no longer at home). Further, albeit indirect, evidence for the specialization of *ka-* come from its uses as NOT YET (Appendix B.10.1.3.1).
- Pragmaticity: compatible with both scenarios (tentative conclusion).
- Polarity sensitivity: outer negation yields NO LONGER.
- Restriction: in the absence of overt aspect marking, *ka-* only serves as STILL with stative verbs, whereas the combination with dynamic verbs yields NOT YET. In order to get an affirmative reading with dynamic verbs, *ka-* needs to be combined with the progressive aspect; thus compare (B.110) to (B.113) below.

(B.108) Context: three friends had agreed to meet at the roadside to catch a bus. Two of them met, waited for a bit and then one of them called the third friend on his cell phone. He reports:

A-ka-lé bɔ-pā-m.
SUBJ.3SG-still-be_at NCL-house-inside
'He is still at home.' (Essegbe2012)

(B.109) Context: a man had been waiting for his girlfriend for a long time and got angry. When she eventually showed up, her intents of mollifying him showed no effect.

 ‘He is still collecting the money.’ (James Essegbey, p.c.)

B.10.1.3 Uses related toother phasal polarity-concepts

B.10.1.3.1 Not yet

- Essegbey2012 (Essegbey2012, Essegbey2019).
- This function obtains with dynamic verbs in the absence of overt aspectual marking; thus compare (B.113) to (B.110) above.
- All available examples of this reading have a past or perfective interpretation (as indicated by the use of the English anterior, as well as by Essegbey2019 referring to it as the “negative perfect”).

- (B.111) *ε-ka-ŋa* *bɔ-dɔ*.
 SUBJ.1SG-still-eat NCL-thing
 ‘I have not yet eaten.’ (Essegbey2019)

- (B.112) Context: about making palm wine. When no more wine comes out of the tapping hole, the palm tree is dead.

B.11.1.3 Uses on the fringes of ‘still’

B.11.1.3.1 Scalar contexts

B Africa

- **Dez1980** and **Malzac1960**.
- While in the data consulted *mbola* is not attested with scalar items strictly speaking, there are fixed collocations with two WH-words, *aiza* ‘where’ (B.117) and *rahoviana* ‘when’ (B.118). In both cases, they refer to large remaining quantities (of distance and time).

(B.117) *Mbola aiza i<za>ny.*

still where DEM.SG<INVIS>

‘C'est encore loin, il c'en faut encore de beaucoup, il y en a encore pour longtemps (a marcher, a progresser) [It's still far away, it's still a long way to go, it's still a long time walking or moving]’

(Dez1980, glosses added)

(B.118) *Mbola rahoviana no tonga izy.*

still when FOC arrive 3SG

‘Il viendra dans longtemps. [He'll arrive some long time in the future]

(Dez1980, glosses added)

B.11.1.3.2 Continued iteration (?)

- **Dez1980**.
- According to **Dez1980** “[m]bola peut accompagner un prédicat déterminé par le marqueur ambimodal *indray*, marqueur du renouvellement de l'action. Sa présence introduit une nuance de sens complémentaire malaisée à rendre en français.” [*Mbola* can accompany a predicate modified by the ambimodal marker *indray*, a marker of iteration. Its presence introduces an additional nuance of meaning that is difficult to render in French]. Judging from the free translation of the sole example (B.119), this nuance of meaning appears to be one of continued iteration (‘yet again’).

(B.119) (*Mbola*) *avy indray ny orana.*

still come again DET rain

‘Il pleut encore une fois, la pluie tombe encore (une nouvelle fois)’ [It's raining once again, it is raining again (one more time)]

(Dez1980, glosses added)

B.11.1.4 Broadly adverbial temporal-aspectual uses

B.11.1.4.1 Prospective ‘eventually’

- **Dez1980** and **Ferrand1903**

B.11 Plateau Malagasy (*plt*, *plat1254*)

- This function occurs in combination with the future tense. Ferrand1903 describes it as signalling que “l'action exprimée par le verbe s'accomplira dans un temps indéterminé” [that the action described in the verb will be accomplished at some indefinite time].

- (B.120) *Mbola ha-nao* *i<za>ny* *izy*.

B Africa

B.11.1.6 Marginality

- Judging from the context and explanation by **Dez1980**, (B.125) indicates that the subject constitutes a marginal member of the category ‘house’, although a PhP reading cannot be excluded.

(B.125) Context: about a house with a ruined roof.

Mbola trano io.

still house DEM.SG

‘Ceci sert encore de maison (parce que, par exemple, le toit, quoique endommagé, peut encore servir d’abri). [This still serves as a house (because, for example, the roof, although damaged, can still serve as a shelter)]’ (**Dez1980**, glosses added)

B.11.1.7 Additive and related functions

B.11.1.7.1 Additive

- There is only one instance of this function (B.126) in the references consulted.

(B.126) *Efa mbola tsy mahay lesona Rakoto no mbola mitabataba.*
already still NEG know lesson Rakoto FOC still talkative
‘Not only does he [Rakoto] not know his lessons, but he is talkative also.’
(**Rackowski1998**)

B.12 Ruuli (ruc, ruul1235)

Introductory remarks Aside from descriptive materials, I consulted an unpublished Ruuli corpus (**RuuliCorpus**). I am indebted to Alena Witzlack-Makarevich for sharing the latter with me, as well as for helping with some tricky glosses. Note that Ruuli has a typical Narrow Bantu noun class system. Noun class prefixes in the examples are glossed as NCL for ‘noun class’, together with an Arabic numeral that follows the common Bleek-Meinhof system of referring to Bantu noun classes.

B.12.1 *kya-*

B.12.1.1 General information

- Wordhood: bound morpheme (verb prefix).

B.12.1.2 As a ‘still’ expression

- MolochievaEtAl2021 and NamyaloEtAl2021.
- Specialization: the description by MolochievaEtAl2021 meets my definition.
- Polarity sensitivity: external negation yields NO LONGER.
- Pragmaticity: compatible with both scenarios.
- Further note: *kya-* as STILL is compatible with the perfective aspect in case of inchoative verbs, as in (B.129)

(B.127) *N-a-som-ere* *nga n-kya-li* *mu-to.*

 season of cassava SUBJ-still
 ‘The rainy season has not yet come / not yet finished.’ (original
 translation: ‘... is awaiting, has not yet begun / ended’)
 (NassensteinPasch2021)

B.14 Southern Ndebele (nbl, sout3270)

Introductory remarks The variety discussed here is listed as “South Transvaal Ndebele” in glottolog, and is not to be confused with Zimbabwean Ndebele (nde, nort2795) or the other South African Ndebele variety, Sumayela Ndebele (no ISO code, sout2808). I am indebted to Petrus Mabena for discussing Southern Ndebele data with me and for providing additional examples. Note that Southern Ndebele has a fairly typical Narrow Bantu noun class system. I gloss the individual classes as NCL ‘noun class’ plus a subscript number that follows the common Bleek-Meinhof system.

B Africa

B.14.1 *sa-*

B.14.1.1 General information

B.14.1.2 As a ‘still’ expression

- **CranePersohn2021.**
- Specialization: **CranePersohn2021** clearly describe this expression as one that is in line with my definition, and also point out its incompatibility with inalterable states.
- Pragmaticity: compatible with both scenarios.
- Polarity sensitivity: outer negation yields NO LONGER.

(B.145) *Ba-sa-funda.*

SUBJ.NCL2-still-read

‘They are still reading / still read.’ (**CranePersohn2021**)

(B.146) *U-Sipho u-sa-gula.*

NCL1a-S. SUBJ.NCL1-still-be_ill

‘Sipho is still sick.’ (**CranePersohn2021**)

B.14.1.3 Uses on the fringes of ‘still’

B.14.1.3.1 Scalar contexts

- *Sa-* is compatible with scalar contexts, both involving a direction of decrease (B.147, B.148) and increase (B.149–(B.151). The latter also encompasses ‘no later than’ readings (B.151). Note the absence/non-obligatoriness of a restrictive operator in the increase contexts (B.149, B.150).
- Example (B.151), which features the perfective aspect inflection, could also be subsumed under the ‘thus far only’ use (B.14.1.6.1), which is the context in which **CranePersohn2021** discuss it.

(B.147) Context: We’re at a concert in a pub. I suggest go get another drink, but my friend says he has run out of money. I offer to invite him.

Yewize, ngi-sese-ne-khulu l-ama-randa .

come.IMP SUBJ.1SG-still.COP-with.NCL5-hundred NCL5-ASSOC.NCL6-rand

‘Come, I still have 100 Rand.’ (Peter Mabena, p.c.)

B.14 Southern Ndebele (nbl, sout3270)

B.14.1.4 Broadly adverbial temporal-aspectual functions

B.14.1.4.1 Iterative

- **CranePersohn2021.**
 - This function is only available in combination with the perfective aspect and with verbs that are not inchoative (do not denote a resultant state). It commonly conveys an additional notion of irritation by the recurring situation.
 - The iterative adverb *godu* is optional in (B.152, B.153); it gives extra emphasis to the iterative reading.

- (B.152) *U-Sipho u-sa-buy-ile* (godu).
 NCL1a-S. SUBJ.NCL1-still-return-PFV (again)
 'Sipho is back (yet) again.' (CranePersohn2021)

(B.153) *Idrayara i-sa-rhuny-ez-e* *irhembe* (godu)
 NCL9.dryer SUBJ.NCL9-still-shrink-CAUS-PFV NCL9.shirt (again)
 'The dryer shrank a shirt again (it happened another time).'

B Africa

(CranePersohn2021)

B.14.1.4.2 Prospective ‘eventually’

- Like its Xhosa cognate (Appendix B.19.1.4.1), *sa-* has a prospective ‘eventually’ reading when combined with forms of *ya* ‘go’ and *za* ‘come’, including their grammaticalized forms (see CraneMabena2019 for extensive discussion of the latter).

(B.154) *Se-khe w-a-ya e-si-tolo na? – Awa*
already-do_once SUBJ.2SG-SUBSEC-go LOC-NCL7-store Q NEG
ngi-sa-zoku-ya.
SUBJ.1SG-still-FUT-go
'Have you been to the store? –No, I'll go yet/later.'
(Peter Mabena, p.c.)

(B.155) Context: after a heated discussion.

U-sa-zaku-bona bonyana ngubani kithi so-ba-bili
SUBJ.2SG-still-FUT-see COMP COP.who to.1PL 1PL-NCL2-two
o-nemb-ile-ko.
REL.SUBJ.NCL1-hit-PFV-REL
'You'll see yet who of us two is right.' (Peter Mabena, p.c.)

(B.156) Context: about someone who works way to hard.

(E-ku-gcineni) u-sa-zi-balulal-isa
LOC-NCL15(INF)-finish.LOC SUBJ.NCL1-still-REFL-kill-CAUS
ngom-sebenzi.
COP.NCL3-work
'S/he'll work himself/herself to death.' (Peter Mabena, p.c.)

B.14.1.5 Marginality

- *Sa-* is compatible with readings of marginality.

(B.157) A: I'm really annoyed my aunt has left most of her fortune to an animal shelter, and only 100,000 Rand to me.
B: *i-100,000 nokho i-sese-si-samba*
NCL9-100,00 however SUBJ.NCL9-still.COP-COP.NCL7-lump_sum
es-amukeleka-ko.
REL.SUBJ.NCL.7-be_alright-REL
'100,00 is still a decent sum.' (Peter Mabena, p.c.)

B.15 Swahili (swh, swah1253)

(B.158) Context: talking about tennis skills.

Ngi-se-nга-m-hlula *yena* *u-Paul, kodwana u-Mark*

u-ngcono *ku-na-mi.*
 SUBJ.NCL1-better LOC-with-1SG

‘I can still beat Paul, but Peter is better than me.’ (Peter Mabena, p.c.)

(B.159) Context: talking about political views.

U-Bongani u-sese-nobu-ngcono.

NCL1a-B. SUBJ.NCL1-still.COP-with.NCL14-moderation

‘Bongani is still moderate (as opposed to others, who have more radical views).’ (Peter Mabena, p.c.)

(B.160) *I-Thohoyandou i-sese-nга-phasi* *kwe-Limpopo*
 NCL9-T. SUBJ.NCL9-still.COP-in-land LOC.ASSOC.NCL9-L.
 ‘Thoyandou is still within Limpopo province.’ Peter Mabena, p.c.)

B.14.1.6 Restrictive (non-temporal)

B.14.1.6.1 ‘Thus far only’

- CranePersohn2021.
- This reading obtains with the perfective aspect and non-inchoative verbs.
- CranePersohn2021 suggest that this use goes back to aspectual coercion, originating with predicates that form part of a natural sequence of events, as in (B.162).

(B.161) *Ngi-sa-dl-e* *kancani nje.*
 SUBJ.1SG-still-eat-PFV a_little now
 ‘I’ve just eaten a little portion for now.’ (CranePersohn2021)

(B.162) *Ikukhu* *i-sa-bekele.*
 NCL9.chicken SUBJ.NCL9-still-lay_eggs.PFV
 ‘The chicken has (only) laid these eggs (i.e. it has not yet started brooding).’ (CranePersohn2021)

B.15 Swahili (swh, swah1253)

Introductory remarks Apart from the descriptive materials below, I searched the Helsinki Corpus of Swahili 2.0 (<http://urn.fi/urn:nbn:fi:lb-201608301>). I am furthermore indebted to Ponsiano Kanijo, Maude Devos, and Rasmus Bernander for discussing Swahili data with me. Swahili has two STILL expressions: *bado*

B Africa

and the much less frequent *ngali*. Only for *bado* do I have clear indications of additional functions. Also note that Swahili has a fairly typical Narrow Bantu noun class system. I have glossed the individual classes as NCL ‘noun class’ plus a subscript number that follows the common Bleek-Meinhof system.

B.15.1 **bado**

B.15.1.1 General information

- Wordhood: free morpheme.
- Syntax: either preceding the predicate or in clause-final position.
- Etymology: from Omani Arabic *bafd-u* ‘still’.

B.15.1.2 As a ‘still’ expression

- Ashton1947, Mpiranya2015 Sacleux19391941, Schadeberg1990 and TUKI2014.
- Specialization: the various descriptions of this marker, when taken together, give a fairly good indication that this marker conforms to my definition. This is corroborated by the fact that its use is odd in contexts that lack continuity (e.g. ex. B.166) and with inalterable states (e.g. ex. B.167). Further, albeit indirect, evidence comes from its use as NOT YET (Appendix B.15.1.4.1).
- Pragmaticity: Schadeberg1990 describes this marker as implying an unexpectedly late continuation. This is, however, a theory-driven conclusion; see vanderAuwera2021 for a recent criticism. My data shows that *bado* is compatible with both scenarios.
- Polarity sensitivity: inner negation yields NOT YET
- Further note: *bado* can serve as an elliptical affirmative answer, as in (B.165). It is also compatible with anterior *me-* in a stative reading (B.164).

- (B.163) *Bado ni-na-soma ma-gazeti.*
 still SUBJ.1SG-read NCL6-newspaper.
 ‘I am still reading newspapers / I still read newspapers.’
 (Mpiranya2015, glosses added)

- (B.164) *Bado a-me-lala.*
 still SUBJ.NCL1-ANT-(fall)_asleep
 ‘S/he is still sleeping.’ (Ashton1947, glosses added)

- (B.165) *Wewe bado ni mw-anafunzi? – Bado.*
 2SG still COP NCL1-student still
 ‘Are you still a student? – Yes [I still am].’ (Ponsiano Kanijo, p.c.)

B.15 Swahili (swh, swah1253)

- (B.166) # *Leo asubuhi, Amani h-a-ku-wepo sokoni na*
 today morning A. NEG-SUBJ.NCL1-NEG.PST-LOC.COP market and
sasa bado yu-po sokoni.
 now still SUBJ.NCL1-LOC.COP market
 (intended meaning: 'This morning Amani was not at the market and
 now he still is at the market') (Ponsiano Kanijo, p.c.)
- (B.167) # *Bibi y-angu bado ni m-kongwe.*
 grandmother NCL9-POSS.1SG still COP NCL1-ancient
 (intended meaning: 'My grandmother is still very old')
 (Ponsiano Kanijo, p.c.)

B.15.1.3 Uses on the fringes of 'still'

B.15.1.3.1 Scalar contexts

- *Bado* is compatible with scalar contexts, such as the decrement uses in (B.168, B.169) and restricted increase in (B.170, B.171); note the absence of a restrictive operator in the latter examples.
- A scalar function also underlies the common expression *bado kidogo* 'soon, not quite yet', lit. 'still a bit'.

- (B.168) *"Bado maiti kama 42 zi-ko shimo-ni na*
 still corpse.NCL10 like 42 NCL10-LOC.COP hole-LOC COM
ha-tu-ju-i kama kweli tu-ta-fanikiwa

'Thomas heard the bed creak. He saw that it was still (only) eleven
o'clock.' (Helsinki Corpus of Swahili 2.0, glosses added)³

B.15.1.4 Uses related to other phasal polarity concepts

B.15.1.4.1 Not yet

- **Sacleux19391941, TUKI2014 and VeselinovaDevos2021.**
- This function obtains in the following context:
 - In the absence of an overt predicate. This includes questions following a pattern 'p or still' > p or not yet' (B.172, B.173), negative replies to polar questions (B.174), and uses as a pro-predicate in contrastive contexts (B.175).
 - With an infinitival complement; see (B.176).

- (B.172) *I-me-rudi ku-tengenez-wa au bado?*
SUBJ.NCL9-ANT-return NCL15(INF)-repair-PASS or still
'Has it (fan) be fixed again or not yet?'
(Ashton1947, glosses added)

- (B.173) *Je, Serikali i-me-u-acha m-radi*
Q government.NCL9 SUBJ.NCL9-ANT-OBJ.NCL3-leave NCL3-project
huo au bado?
DEM.NCL9 or still
'Has the government abandoned the project or not yet?'
(Helsinki Corpus of Swahili 2.0)

- (B.174) *A-me-kuja? – Bado.*
SUBJ.NCL1-ANT-come still
'Ist er gekommen? – Noch nicht. [Has he come? –Not yet]'
(Schadeberg1990, glosses added)

³ *saa tano* is literally 'five hours', which equals 11 o'clock Swahili time.

B.15 Swahili (swh, swah1253)

- (B.175) *Kwa sasa ma-ji ya-me-toka m-to-ni*

'Now, why should this gas not be used abandoning the CCM's plan and leaving it in Mtwara, so that what is planned to be done in Bagamoyo would be done in Mtwara, because even Mtwara is still Tanzania!?'
(<https://noordinjella.livejournal.com/38982.html>; accessed 27 February 2021)

B.15.1.6 Additive and related functions

B.15.1.6.1 Additive

- **Sacleux19391941** and **Schadeberg1990**
- This appears to be more emphatic than *na pia* 'and also' (B.180, B.181), and to combinations with the root *ingine* '(an)other', where it also provides emphasis ('yet another, yet more'), as in (B.182).

(B.180) *Fulani ni mw-ongo na bado ni mw-izi.*
so_and_so.NCL1 COP NCL1-lier and still COP NCL1-thief
'Un tel est menteur, et de plus il est voleur. [So-and-so is a lier, and on top of that s/he's a thief]' (Sacleux19391941, glosses added)

(B.181) *Ni-li-nunua ma-chungwa, ndizi, ma-embe, na bado*
SUBJ.1SG-PST-buy NCL6-orange banana.NCL10 NCL6-mango COM still
nyama kidogo.
meat.NCL9 a_little
'I bought oranges, bananas, mangos, and even some meat.'
(Ponsiano Kanijo, p.c.)

(B.182) *A-me-kuja m-tu mw-ingine bado.*
SUBJ.NCL1-ANT-come NCL1-person NCL1-other still
'Il est venu une autre personne encore. [Yet another person has come]'
(Sacleux19391941, glosses added)

B.15.1.7 Broadly modal and interactional functions

B.15.1.7.1 Concessive apodoses

B.15 *Swahili (swh, swah1253)*

- *Bado* has concessive uses, a function that typically obtains together with committative *na*, i.e. ‘and still’, as in (B.183, B.184)
- That this function is not a mere contextual inference of the phasal polarity function is especially clear in cases like (B.185), in which *bado* is combined with a “narrative” or “consecutive” form of a telic predicate, giving a perfective and sequential reading.
- Impressionistically, this use is more common in formal language, where calquing from English might play a role.

(B.183) *Ni n-zuri na tamu kuliko u-na-vyo-weza*
 COP NCL9-good COM tasty than SUBJ.2SG-PRS-REL.NCL8-can
ku-fikiria na bado bei y-ake ni nafuu sana.

B.16 Tashelhyit (shi, tach1250)

Apart from descriptive materials referenced below, I searched *Stroomer2001*’s (*Stroomer2001*, *Stroomer2002*) text collections. I am furthermore indebted to Rachid Ridouane for discussing Tashelhyit data with me and for providing additional examples, as well as to Axel Fanego for helping with some additional tricky glosses.

B.16.1 sul

B.16.1.1 General information

- Wordhood: free morpheme.
- Syntax: fixed, pre-predicate position.

B.16.1.2 As a ‘still’ expression

- *Fanego2021*.
- Specialization: *Fanego2021*’s description meets my definition Further, albeit indirect, evidence for its specialization comes from its use as NOT YET (Appendix B.16.1.4.1).
- Pragmaticity: compatible with both scenarios (tentative conclusion).
- Polarity sensitivity: combination with negation yields the corresponding negative concepts. With imperfective aspect, both NOT YET and NO LONGER are possible outcomes, with the respective scope of the negation being determined by word order. With perfective verbs, only NOT YET is available; the latter also be expressed by negation plus *ta* ‘yet’, or all three items (NEG *ta sul*) combined.
- Further notes: the perfective inflection has an ongoing state reading with many verbs, allowing for a reading of a persistent state, as in (B.188).

(B.186) Context: the opening of a tale.

Ikkattinn yat twal, lliy a sul i-sawal ddunit,
there_once_was one time when IRR still 3SG.M-speak.AOR world

B.16 *Tashelhyit (shi, tach1250)*

munn kra n lawħaš:

be_together.PFV-3PL.M three of animals

‘Once upon a time, when (all creatures in) the world (were [still] able to) speak, some animals came together.’ (Stroomer2002, glosses added)

- (B.187) Context: a man has found a speaking tortoise. He has brought it to the king as a present, but the tortoise did not speak again. The king says:

Aw-i-yat t; bbi-yat ixf nns; an
take_away.IMP-2PL.M 3SG.ACC.M cut.IMP-2PL.M head POSS.3SG COMP

- (B.202) Context: a man is flying high above the world on the back of a jinnee.

Fk yyi sul tifiyyi, ran n-zayd.
 give.IMP 1SG.ACC still meat FUT 1PL-leave
 'Give me (a[nother] piece) of meat, so that we can continue flying.'
 (Stroomer2002, glosses added)

B.16.1.8 Broadly modal and interactional functions

B.16.1.8.1 Concessive apodoses

- *Sul* can mark the apodoses of concessive constructions. That this is not merely a contextual inference becomes evident by the combination with the telic predicate plus bounded viewpoint in (B.204).

- (B.203) *Leuṭla ayad macc i-xṣṣa ad sul i-xdm.*
 holiday this_is but 3SG.M-need.PFV IRR still 3SG.M-work.AOR
 'It's a holiday and he still has to work.' (Rachid Ridouane, p.c.)

- (B.204) Context: Fox has tricked a man into giving him food and then rushed off. The man, however, was holding Fox's tail, which has torn off.

B.17 Tima (tms, *tima1241*)

T-frh-t *nit* *sul* *t-fl-t* *d* *abakku*
 2SG-be_happy.PFV-2SG indeed still 2SG-leave.PFV-2SG VEN tail
nnk *γ u fus inu!*
 POSS.2SG at hand POSS.1SG
 'You may be happy now, but you left your tail in my hand!'
 (Stroomer2001, glosses added)

B.17 Tima (tms, *tima1241*)

Introductory remarks I am indebted to Gertrud Schneider-Blum for discussing Tima data with me, for supplying glosses, and for eliciting additional examples.

B.17.1 *bʌʌr*

B.17.1.1 General information

- Form: there is a free variant *bʌr*.
- Wordhood: intermediate: takes a a singular/plural person index.

B.17.1.2 As a 'still' expression

- SchneiderBlum2013.
- Specialization: in absence of more contextualized examples, case like (B.205–B.208) give a fairly good indication that this marker conforms to my definition. For instance, (B.205) *bʌʌr* not only signals that, at topic time, Jiddu continued to be small, but also alludes to the discontinuation of this state at utterance time. Similarly, in (B.206) *bʌʌr* signals that the plant is eaten before it loses its green colour. Further, albeit indirect, evidence comes from its use as NOT YET in the absence of negation (B.17.1.3.1).
- Polarity sensitivity: inner negation yields NOT YET. In subordinate contexts this yields precedence ('when not yet *p, q*' = 'before *p, q*'). Outer negation yields NO LONGER.
- Pragmaticity: the available data allow for no conclusion.
- Further note: *bʌʌr* can be used as an (elliptical) affirmative one-word answer, as in (B.208).

B Africa

- (B.205) *A=yu=ween i-di-yʌŋ-aa tetek, jiddu a-bʌʌr*

 STAT.SG-still POT.2SG=FUT.2SG-find:PLUR=2SG later
 'You will see yet/later.' (Gertrud Schneider-Blum, p.c.)

B.17.1.5 # Marginality

- *Bʌʌr* appears not to be compatible with readings of marginality. Thus in (B.17.1.5), *bʌʌr* can only have a phasal polarity interpretation, not a "categorizing" one. Similarly, speakers would not use *bʌʌr* to translate 'I can still beat Musa' in (B.214).

- (B.213) *Bant̪uyu a-twaari=na u-sudaan=I-ya, kʌwudʌ*
 Banthuyu SOURCE=outside=PROX DIR=Sudan=SELECTIVE=FOC Kawda
a-bʌʌr a=nt̪ʌ-tiin=nʌ u=sudaan=I.
 STAT.SG-still SOURCE=inside=PROX DIR=Sudan=SELECTIVE
 'Banthuyu is outside of Sudan, Kawda is still inside Sudan (but they want to be separated).'
 not: 'Banthuyu is still (within the margins of) Sudan.'
 (Gertrud Schneider-Blum, p.c.)

- (B.214) Context: about football skills. Musa falls within the range of speakers I can beat, but Ali is better than me.

B Africa

 (Gertrud Schneider-Blum, p.c.)

B.18 Tunisian Arabic (aeb, tuni1259)

Introductory remarks Apart from descriptive materials, I consulted **RittBenmimoun2005Brot** (**RittBenmimoun2005Brot**, **RittBenmimoun2005Wiener**, **RittBenmimoun20062010**,

RittBenmimoun2007, **RittBenmimoun2011Spiele**, **RittBenmimoun2011**) text collections, as well as the TuniCo (TuniCo). Note that Tunisian Arabic makes use of the non-concatenative ‘root-and-pattern’ morphology that is characteristic of Semitic (PatEl2019), hence the mentioning of discontinuous roots at several points throughout this appendix. Tunisian Arabic has two candidates for STILL expressions: *māzāl* and *bāqi*. While *māzāl* clearly conforms to my definition, *bāqi* (which is only found in northern sedentary varieties) is a borderline case, perhaps better understood as a marker of stasis.

B.18.1 *māzāl*

B.18.1.1 General information

- Form: subject to certain changes in vowel quality and length, primarily determined by the affixes attached.
- Wordhood: intermediate, a bound root taking person, number, and gender (where applicable) indexes. In some varieties it is also attested, though less commonly so, as an invariable word (formally 3SG.M).
- Etymology: < *mā-zāl* 'NEG-cease.PFV' '.
- Syntax: either in pre-predicate or in clause-final position.

B.18.1.2 As a ‘still’ expression

- **Amor1990**, **Boris1958**, **FischerEtAlTunisian**, **MarcaisGuiga19581961** and **Mion2013**; passing mentions in **Jemni2011**, **Talmoudi1980**.
- Specialization: the description by **FischerEtAlTunisian** meets my definition and addresses both the prior time presupposition and the incompatibility with inalterable situations.

B.18 Tunisian Arabic (aeb, tuni1259)

- Polarity sensitivity: inner negation yields NOT YET; in the Takrouna variety of MarcaisGuiga19581961 the external negation to NO LONGER is also attested.
- Pragmaticity: compatible with both scenarios. To give prominence to the unexpectedly late scenario, *māzāl* can receive nuclear stress.
- Further note: example (B.218) illustrates this item with a dynamic verb in an imperative. This is attested only in older doculects; modern varieties would make use of the verb *z-y-d* ‘continue’.

- (B.215) Context: about professional politicians who know how to play the system.

T-arqā-hum milli māzāl-u f-il-maktab

(RittBenmimoun2011, glosses by FischerEtAlTunisian)

B.18.1.4 Uses relating to other phasal polarity concepts

B.18.1.4.1 Not yet

- FischerEtAlTunisian, MarcaisGuiga19581961, RittBenmimoun2014 and Singer1984.
- This function obtains in the absence of an overt predicate (as first observed by MarcaisGuiga19581961). More precisely, it is found
 - As a negative response to a polar question (B.222).
 - In disjunctive (B.223) and contrastive (B.224) contexts.
 - With nominal subjects either denoting time spans, or *waqt* ‘time’ itself. A further complication here pertains to word order and definiteness. With a preceding subject NP, the resulting sentence is ambiguous (B.225). If the NP follows *māzāl*, then an affirmative (B.226) or negative (B.227) reading is a function of definiteness.

B.18 Tunisian Arabic (aeb, tuni1259)

- (B.236) *Māzāl-ši tawwa!*
still-Q now
'That's enough!' (FischerEtAlTunisian)

B.18.2 *bāqi*

B.18.2.1 General information

- Woordhood: free morpheme.
- Etymology: formally the SG.M form of the active participle of the root *b-q-y* 'remain'.

B.18.2.2 As a (borderline) STILL expression

- Jemni2011, FischerEtAlTunisian, MarcaisGuiga19581961 and Singer1984.
- Specialization: FischerEtAlTunisian observe that *bāqi* presupposes a left-abutting runtime of situation depicted in the clause and that it is infelicitous when combined with inalterable states. However, none of the data points feature clear-cut contexts that would be indicative of evoking an alternative scenario, and the translations given by MarcaisGuiga19581961 are more indicative of a purely stative meaning, similar to what is found with French *toujours* (see Appendix D.2.2.2); note for instance 'sans qu'on en voit la fin [without an end in sight]' in (B.238). *Bāqi* thus constitutes a borderline case of a STILL expression.
- Polarity sensitivity: inner negation yields NOT YET.
- Pragmaticity: if taken to be a bona fide STILL expression, then *bāqi* would be specialized for the unexpectedly late scenario.
- Syntax: relatively mobile.
- Further note: example (B.239) illustrates *bāqi* with a dynamic verb in an imperative. This is attested only in older doculects; modern varieties would make use of the verb *z-y-d* 'continue'.

- (B.237) *Billi ʃand-u baršā milli mšā aʃlī-na bāqi*

(B.241) Context: the speaker is talking about his travels and the addressee keeps asking for more details.

Qadd-ma n-qul-l-ik barṣa bāqi šwayya.

measure-SUBORD 1SG-say.IPFV-to-2SG a_lot still little

‘No matter how much I tell you, you won’t be satisfied (lit. it remains little)’ (TuniCo, cited in FischerEtAlTunisian)

B.18.2.4 Other functions

B.18.2.4.1 ‘Other than that, apart from that’

- FischerEtAlTunisian and MarcaisGuiga19581961.

B Africa

- *Bāqi* is repeatedly attested in uses along the lines of ‘other than that’ or ‘apart from that’. As pointed out by FischerEtAlTunisian, this is best understood as directly related to the lexical source ‘remainder’ rather than being mediated by *bāqi* as a marker of persistence.

(B.242) Context: about the design of a pearl necklace.

fmal-t hakka žūst əkgošē b-il-akhal hakka bōnd.
 make.PFV-1SG thus just crochet with-ART.DEF-black thus band
W-bāqi kull dē pēgl.
 and-remainder every pearls
 ‘I just crocheted a black band like that. Other than that, it’s all pearls.’
 (TuniCo, cited in FischerEtAlTunisian)

 ‘Ce qui a fait que j’ai parlé, c’est (que j’ai vu) la laideur de procédés; car,
 pour le reste, la chose ne me regarde pas. [What made me speak was
 (that I saw) the ugliness of the process; other than that, I’m not
 concerned by the issue]’ (MarcaisGuiga19581961; glosses by
 FischerEtAlTunisian)

B.19 Xhosa (xho, xhos1239)

Introductory remarks I am indebted to Onelisa Slater and Phumelele Lovisa for discussing Xhosa data with me and for providing additional examples. Xhosa has a typical Bantu noun class system. I have glossed the individual classes as NCL ‘noun class’ plus a subscript number that follows the common Bleek-Meinhof system.

B.19.1 sa-

B.19.1.1 General information

- Form: *se-* with copulatives.
- Wordhood: bound morpheme (verb prefix).

B.19.1.2 As a ‘still’ expression

- Bennie1939, CranePersohn2021, McLaren1936, GreaterDictionaryXhosa, Oosthuysen2016 and SavicThesis.
- Specialization: the description by CranePersohn2021 meets my definition and explicitly mentions the incompatibility with inalterable states.
- Pragmaticity: compatible with both scenarios.
- Polarity sensitivity: outer negation yields NO LONGER. NOT YET is expressed by a dedicated marker *ka-*.
- Further note: compatible with the perfective aspect plus inchoative verb (B.245).

(B.244) *I-hashe eli-se-li-tsha*
 NCL5-horse REL.SUBJ.NCL5-still-COP.NCL5-young

yimbola
 COP.NCL9.red_clay
 ‘The clothing is still very red because of the red clay.’
 (DuPlessisVisser1992, glosses added)

B.19.1.3 Uses on the fringes of ‘still’

B.19.1.3.1 Scalar contexts

- *Sa-* is compatible with scalar contexts, including the decremental uses in (B.247, B.248) and the ‘still no more than’ ones in (B.249, B.250). Examples (B.249, B.250) indicate that a restrictive ‘only’ operator is not compulsory in contexts of a limited increase.

B Africa

- (B.247) Context: We're at a concert in a pub. I suggest to get another drink, but my friend says he ran out of money. I invite him.

Yiza, ndi-se-n-e-hundred Rand.

come.IMP SUBJ.1SG-with-NCL9-hundred Rand

‘Come, I still have a hundred Rand.’ (Onelisa Slater, p.c.)

- (B.248) Context: We have an apple tree in our garden and we've harvested a huge load, and there's not end in sight. So we tell our friend:

Ukuba u-funa ama-apile, a-se-ma-nintsi

if SUBJ.2SG-want NCL6-apple SUBJ.NCL6-still-COP.NCL6-many

REL.SUBJ.NCL6-be_left-PFV-REL LOC-NCL3-tree-LOC

‘If you want apples, there are still a lot left in the tree.’

(Onelisa Slater, p.c.)

- (B.249) Context: You are expected to be sent eight books. You have gotten six so far, and your friend tells you she already got all eight. So you reply:

Ndi-se-n-ezin-tandathu (qha).

SUBJ.1SG-still-with-NCL10-six (only)

‘I still have (only) six.’ (Onelisa Slater, p.c.)

- (B.250) Context: We're planning to go to an event in the evening. I've got ants in my pants and want to leave already. You reply:

I-se-yin-tsimbi y-esi-thandatu

SUBJ.NCL9-COP.NCL9-bell NCL9-of.NCL7-six

‘It's still six o' clock.’ (Onelisa Slater, p.c.)

B.19.1.4 Broadly temporal-aspectual adverbial uses

B.19.1.4.1 Prospective ‘eventually’

- McLaren1936 and GreaterDictionaryXhosa.
- According to GreaterDictionaryXhosa, this function is restricted to verbs of directed motion, as in (B.251). This, however, includes grammaticalized forms of *ya* ‘go’ and *za* ‘come’. These serve as future markers without necessarily contributing a sense of motion, as in (B.252, B.253). For an in-depth discussion of these grammaticalized forms in closely related Southern Ndebele, see CraneMabena2019.
- Negation of this use denies the future existence of any situation of the type described by the predicate (B.254).

- (B.251) A: *Sewukhe waya evenkileni?*

‘Have you been to the store?’

B *Hayi, ndi-sa-ya.*

no SUBJ.1SG-still-go

‘Have you been to the store? – No, I am still going to go.’

(GreaterDictionaryXhosa, glosses added)

(B.252) Context: after a heated discussion.

B Africa

- (B.256) Context: speaking about political views.

U-Bongani u-se-n-obu-gncathu

NCL1a-B. SUBJ.NCL1-still-with-NCL14-moderation

‘Bongani is still moderate (as opposed to others who have more radical views).’ (Onelisa Slater, p.c.)

- (B.257) *i-Tohoyandou i-se-se-Mzantsi Afrika /*
NCL9-T. SUBJ.NCL9-still-LOC-South Africa

ku-se-se-Mzantsi Afrika

SUBJ.LOC-still-LOC-South Africa

‘Tohoyandou is still (in) South Africa (as opposed to other places across the border).’ (Onelisa Slater, p.c.)

B.19.1.6 Restrictive (non-temporal)

B.19.1.6.1 ‘Thus far only’

- CranePersohn2021.
- This reading is only available in combination with the perfective aspect and non-inchoative verbs.
- As examples like (B.258, B.259) show, this use does not require a scale.
- CranePersohn2021 suggest that this use goes back to aspectual coercion, originating with predicates that form part of a natural sequence of events.

- (B.258) *Ndi-sa-ty-e imengo.*
SUBJ.1SG-still-eat-PFV NCL9.mango

‘(So far) I’ve only eaten mango (e.g. out of more food that is on offer).’

‘So far the kids have played [well] (but let’s not get our hopes too high).’
(CranePersohn2021)

- (B.260) *Ndi-s-akh-e le ndlu.*
SUBJ.1SG-still-build-PFV PROX.NCL9 NCL9.house

‘I have for now/only built this house. (but might built at least one more).’
(CranePersohn2021)

Appendix C: Australia

C.1 Gooniyandi (gni, goon1238)

Introductory remarks A note on the structure of the Gooniyandi verb phrase: in broad strokes, verbal predicates in Gooniyandi typically consist of an uninflected element belonging to the open class of lexical (co)verbs, followed by an inflected element from the small and closed class of “classifier” verbs; see McGregor1990 for more information. Note that slashes within Gooniyandi examples indicate the boundaries of intonational units, as marked by McGregor1990.

C.1.1 =nyali

C.1.1.1 General information

- Wordhood: bound morpheme; an enclitic that can attach to various parts of speech.
- Syntax: typically attaches to its associate (but see below on host restrictions). The marker never attaches to the inflected part of the verb phrase.

C.1.1.2 As a ‘still’ expression

- McGregor1990; additional discussion in SchultzeBerndt2002.
- Specialization: =nyali is primarily a multifaceted restrictive marker. There are few contextualized examples of =nyali as STILL in McGregor1990’s (McGregor1990) grammar. Cases like (C.1–C.4), however, give quite a solid indication that this item conforms to my definition. Further, albeit indirect, evidence, comes from the robust STILL–restrictive polysemy (see Section 3.4.2) and the semantic parallels between the two functions.
- Pragmaticity: the available data do not allow for any conclusions.
- Polarity sensitivity: inner negation yields NOT YET.
- Further note: the host of =nyali as STILL is never a verbal constituent. Often *wamba* ‘later, after that point’ (essentially a marker of persistence; see McGregor1990) serves as the host. In (C.2) the marker is cliticized to a nominal predicate. In (C.4) =nyali has scope over a secondary predicate.

C Australia

 things-COM=still sleep he_lies
 'He sleeps still dressed.' (McGregor1990)

C.1.1.3 Broadly adverbial temporal-aspectual functions

C.1.1.3.1 Always

- McGregor1990; additional discussion is found in SchultzeBerndt2002.
- This function is primarily found with =nyali operating on a secondary predicate, as in (C.5, C.6). Sometimes, albeit rarely, =nyali as 'always' takes *ngambiddi* 'again' as its host, together "indicating daily iterative occurrences of processes such as shaving" (McGregor1990); see (C.7).

- (C.5) *Mangaddi gilbawayingi marlami=nyali barnbidi.*
 NEG he_was_finding_it without=still he_returned
 'He would never find (anything); he'd always return empty handed.'
 (McGregor1990)
- (C.6) *Jimandi=nyali bariwindi mangaddi dagooddawani.*
 good=still he_climbed NEG he_fell_in
 'He climbed well all the way; he didn't fall.' (McGregor1990)
- (C.7) *Ngambiddi=nyali thiddajga.*
 again=still he_defecates
 'He defecates daily.' (McGregor1990)

C.1 Gooniyandi (*gni, goon1238*)

C.1.1.3.2 Iterative and restitutive

- McGregor1990; additional discussion in SchultzeBerndt2002.
- Iterative (C.8–C.9) and restitutive uses (C.11) are available. Examples (C.12, C.13) illustrate responsive uses, which are notionally closely related to the restitutive ones.
- In iterative function, =nyali typically attaches to the lexical (i.e. uninflected) verb, thus preceding the classifying verb, as in (C.8).
- Iterative =nyali is also found in a collocation with *ngambiddi* ‘again, next time’ (C.9, C.10). While the data do not allow for any conclusions, (C.10) suggests that we might be dealing with continued iteration (‘yet again’) and/or list continuation (‘yet another’). SchultzeBerndt2002 reports personal communication from William McGregor that this collocation is idiomatic and might be undergoing lexicalization.
- In its restitutive function =ngali often cliticizes to the constituent denoting the former state or location, as in (C.11).

(C.8) *Jamoondoo milanggiddinyayi mila=nyali yawinggiddinyayi.*
 other_day I_saw_you_two see=still I_will_extend_you_two
 ‘I saw you two the other day, and I’ll see you again later.’
 (McGregor1990)

(C.9) *Nganyi nyagginboowoo ngambiddi=nyali.*

'He's still looking at me [or: only looking at me], not at him.'
(McGregor1990; also see SchultzeBerndt2002)

(C.16) *Mangaddi yoodgoowali ngirnda marla-ya=**nyali***
NEG I_was_putting_it_down this hand-LOC=still
goorijgila
I_hold_it
'It haven't put it down; it's right here in my hand / still in my hand.'
(McGregor1990)

(C.17) *Moongaya=**nyali** gjiloondi.*
morning=still I_got_up
'I got up early in the morning.' (McGregor1990)

C.1.1.5 Additive and related functions

C.1.1.5.1 Additive

- McGregor1990; additional discussion in SchultzeBerndt2002

C.2 *Gurindji* (*gue, guri1247*)

- Some of the examples grouped here, including (C.20), are discussed by McGregor1990 under the heading of iteration, as these involve the addition of an identical act, but with switched participants.
- =nyali is also repeatedly attested in conjunction with *yaanya* ‘other’ (C.21).

(C.18) *Moongayayoo bala=nyali ya-wili*
 morning call=still SBJV-I_will_catch_it
 ‘Tomorrow I’ll send a letter also.’ (McGregor1990)

(C.19) Context: dogs sleep in holes.
Thiddoo gooddgoo-ya=nyali bagiri.
 kangaroo hole-LOC=still he_lives
 ‘Kangaroos live in holes too.’ (McGregor1990)

(C.20) *Birdi dijga yaanya birdi dij=nyali-a.*
 leg he_breaks_it other leg break=still-he_extends_to_it
 ‘He breaks one leg (of a frog), then the other [as well].’
 (McGregor1990)

(C.21) *Yaanya gamba-ngarna=nyali giwili.*
 other water-dweller=still water_goanna
 ‘Another water creature is the water goanna.’ (McGregor1990)

C.2 *Gurindji* (*gue, guri1247*)

Introductory remarks I am indebted to Felicity Meakins for making the Gurindji dictionary (MeakinsEtAl2013) available to me. Similar to the other languages of northern Australia (e.g. Bowern2014), verbal predicates in Gurindji often consist of an uninflected lexical (co)verb, combined with an inflected element from the small, closed class of inflecting verbs; see MeakinsMcConvell2021 for extensive discussion.

C.2.1 =rni

C.2.1.1 General information

- Form: following consonants an epenthetic syllable *pa/wa* is added, yielding =*parni*=/*warni*. In addition, there is reduplicated =*rnrnri* and a complex form =*rningan*.
- Wordhood: bound morpheme, an enclitic that attaches to various parts of speech, but not to the inflected part of the verbal predicate (but see Appendix C.2.1.4.1–C.2.1.5.1 on =*rningan*).

C Australia

C.2.1.2 As a ‘still’ expression

- McConvell1983 and MeakinsMcConvell2021; additional discussion in vanBaar1991 (vanBaar1991, vanBaar1997) and SchultzeBerndt2002.
- Specialization: =*rni* is primarily a multi-faceted restrictive marker. The discussion by McConvell1983 gives a fairly good indication that it also encodes the function of STILL. Further, albeit indirect, evidence, comes from the robust still-restrictive polysemy (Section 3.4.2) and the semantic parallels between the two functions.
- Pragmaticity: the data allow for no conclusion.
- Polarity sensitivity: inner negation yields NOT YET.
- Further note: in (C.24) =*rni* has scope over a secondary predicate. Ex. (C.25, (C.26) illustrate the use with a dynamic verb in an imperative and jussive, respectively. McConvell1983 points out that (C.26) could be read as also invoking the restrictive use of =*rni* (Appendix C.2.1.6.1).

- (C.22) *Lawara=rni marlumarlu=rni*
 nothing=still crippled=still
 ‘No (improvement) yet, (he is) still crippled.’ (McConvell1983)
- (C.23) *Jakiliny tampang=parni karri-nyana.*
 moon dead=still be-PRS
 ‘The moon is still dead (i.e. it is new moon).’ (McConvell1983)
- (C.24) *Ngu=rna=rla kurrurij-ja jalngak waninya rarraj-ja=rni.*
 AUX=SUBJ.1.EXCL=3.OBL truck-LOC mount fall.PST run-LOC=still
 ‘I got on the truck while it was still moving.’
 (MeakinsMcConvell2021)
- (C.25) Context: the addressee is climbing up a tree.
Partaj ya-nta kankula=rni!
 climb go-IMP up=still
 ‘Climb further up!’ [he said].’ (MeakinsMcConvell2021)
- (C.26) Context: after a car breakdown.
Ya-nan-ku=li jamana=rni warrij.
 go-PROG-FUT=SUBJ.1DU.INCL foot=still away
 ‘Let’s keep going (just) on foot.’ (McConvell1983)

C.2.1.3 Uses on the fringes of ‘still’

C.2.1.4 Broadly adverbial temporal-aspectual uses

C.2.1.4.1 Iterative and restitutive =*rningan*

C.2 *Gurindji* (*gue, guri1247*)

- **McConvell1983, MeakinsMcConvell2021** and **MeakinsEtAl2013**; additional discussion in **SchultzeBerndt2002**.
- Form: in this function, as well as the related functions below, we find a complex enclitic =*rningan*; it is unclear what the source of the (*ngan*) part is. As with =*rni*, following consonants.
- Iterative (C.27–C.29) and restitutive (C.30, C.31) uses are attested.
- Iterative =*rningan* can take the inflected verbs as its host, as in (C.27), whereas restitutive =*rningan* always attaches to the uninflected lexical verb.

(C.27) *Karu-ŋku wumara=ma jakarr ma-ni=rningan.*

C.2 *Gurindji (gue, guri1247)*

C.2.1.6 Restrictive (non-temporal)

C.2.1.6.1 (Non-scalar) exclusive

- McConvell1983, MeakinsMcConvell2021 and MeakinsEtAl2013; additional discussion in vanBaar1991 (vanBaar1991, vanBaar1997) and SchultzeBerndt2002.
- As is typical of restrictive markers, this is a cluster of functions. These include the defining ‘only’ use with nominals (C.39) as well as with the main predicate as the associate of the marker (C.40, C.41). It is also used, among other things, to indicate that an act is performed all by oneself (C.42), for emphasis on identity of location (C.43), and for intensification (C.44).
- Restrictive =*rni* can be reduplicated, as in (C.41). The reduplicated form exclusively has the ‘only’ function, thus allowing disambiguation from the competing phasal polarity use.

C.3 Jaminjung-Ngaliwurru (djd, djam1255)

Introductory remarks I am indebted to Eva-Schultze Berndt for discussing Jaminjung-Ngaliwurru data with me, and for providing additional examples. A note on the structure of the Jaminjung-Ngaliwurru verb phrase: simplifying slightly, verbal predicates typically consist of an uninflected element belonging to a large open class of uninflecting "coversbs" plus an inflected member of the small and closed class of verbs proper. See **SchultzeBerndt2000** for more information.

C.3.1 =(C)ung

C.3.1.1 General information

- Wordhood: bound morpheme, an enclitic.
- Syntax: in the case of complex predicates, the uninflected (co)verb, but not the inflected verb can serve as the host.

C.3.1.2 As a 'still' expression

- **SchultzeBerndt2000** (**SchultzeBerndt2000**, **SchultzeBerndt2002**).
- Specialization: =(C)ung is primarily a multifaceted restrictive marker. That phasal polarity STILL is amongst its denotata becomes evident in examples like (C.45–C.48). For instance, in (C.45) the fact that the rock remains covered with water is in contrast with the assumption that, at this particular point in time, this state should no longer hold. Further, albeit indirect, evidence comes from the robustly attested restrictive–STILL polysemy and the semantic overlap between the two functions (see Section 3.4.2).
- Pragmaticity: examples like (C.45, C.46) suggest that =(C)ung is compatible not only with the neutral scenario, but also with the unexpectedly late one.
- Polarity sensitivity: =(C)ung as STILL is not attested in combination with negation (Eva Schultze-Berndt, p.c.).
- Syntax: the host of phasal polarity =(C)ung is relatively free, but subject to the general restriction against inflected verbs.

- (C.45) Context: watching a video of a dreaming site which was partially submitted in water. This would be expected in the wet season, but

C.3 *Jaminjung-Ngaliwurru (djd, djam1255)*

not necessarily at the time of the recording.

C.4 *Kayardild* (*gyd, kaya1319*)C.4 **Kayardild** (*gyd, kaya1319*)

Introductory remarks Most of the Kayardild examples below feature verbs in the “actual” form. This is, in essence, the default inflection for past, present, and immediate future situations and which contrasts with forms that carry more specific temporal-aspectual and modal meanings; see Evans1995 for discussion.

C.4.1 **=(i)da**C.4.1.1 **General information**

- Wordhood: bound morpheme, an enclitic that takes words of various syntactic classes as its host.
- Etymology: < *niida* ‘same’.

C.4.1.2 **As a ‘still’ expression**

- Evans1995 and Round2009; additional discussion in SchultzeBerndt2002.
- Specialization: originally a multifaceted restrictive marker, this item also serves as a STILL expression when attached to the main predicate or a secondary predicate. Its function as a STILL expression becomes evident in examples like (C.54–C.56). For instance, in (C.55), the protagonist continues to be alive, against his assailants’ assumption to the contrary.
- Pragmaticity: the available data do not allow for any conclusions. Evans1995 notes that “persistence may be emphasized” by the verb *wirdi-ja* ‘stay, remain’ as the host of *=(i)da* (also see Evans1995); this could be an indication that the unexpectedly late scenario receives additional marking.
- Polarity sensitivity: inner negation yields NOT YET. However, few examples with negation (including semantically negative items like ‘nothing’) are attested in the data consulted (e.g Round2009).
- Further notes: in (C.56) *=(i)da* marks a secondary predicate. Examples (C.57, C.58) illustrate a jussive and prospective context, respectively.

- (C.54) *Ngada warirr, marndi-i-n=id.*

C.5 *Martuthunira* (vma, mart1255)

Introductory remarks Martuthunira has two candidates for STILL expressions: *waruu(l)* and *parilha*; the latter seems to be related to a verb ‘keep doing, keep trying’. It is only for *waruu(l)* that there is clear evidence of additional functions. Note that several of the examples feature the marker *-rru* ‘now’ (sometimes preceded by an epenthetic element *-wa*). This is a very frequent item in Martuthunira texts and

is used to foreground the item to which it is attached ... [a]t the same time, the clitic serves to define a kind of narrative present, a statement that what has already been said can be now taken as established, and that the narrative will build from this point. (Dench1994).

C.5.1 *waruu(l)*

C.5.1.1 General information

- Form: free variants differ in the presence or absence of final /l/; see Dench1994 for discussion.
- Wordhood: free morpheme.

C Australia

C.5.1.2 As a ‘still’ expression

- Dench1994; additional discussion is found in SchultzeBerndt2002.
- Specialization: the phasal polarity function becomes evident in examples like (C.63–C.65). For instance, in (C.63) the cloth continues to have powder on it, while at the same time it is suggested that at some later point, the powder would no longer be there.
- Pragmaticity: compatible with both scenarios (tentative conclusion). Example (C.64) looks like a good candidate for the unexpectedly late scenario, with the uninterrupted flight of the boomerang continuing to the astonishment of its chasers.
- Polarity sensitivity: combination with negation yields NOT YET.
- Further note: *waruu(l)* also forms part of a derived verb *waruulwa* ‘continue to be unable to do’. Exx. (C.66) illustrates the use in an elliptical imperative.

- (C.63) *Ngunhaa kanya-rnu nhawani-ma-lwayara,*

C.5.1.3 Uses on the fringes of 'still'

C.5.1.3.1 Continued iteration

- Several instances of *waruu(l)* in Dench1994's (Dench1994) grammar feature the sequence *ngartil waruu* 'still again'. In one instance (C.71) the order is reversed.
- The data indicate that this collocation signals continued repetition ('yet again'), perhaps emphasizing the recurrence:
 - Out of a total of eight tokens, in five cases context and/or translation clearly indicate continued repetition of the same type of event; see (C.67, C.68).
 - In (C.69) the sub-events are not completely identical: the act of throwing occurs for a third time, albeit only for the second time with this specific boomerang. Similarly, in (C.70) *ngartil waruul* refers to a series of events (bringing home goods for others), with the roles of the participants switching between the individual occurrences.

³See Dench1994 on the Martuthunira "identification" clitic

C Australia

- Without further context, (C.71) is unclear: I can only assume that the addressee has been dissatisfied more than once before.

C.6 Wardaman (wrr, ward1246)

C.6.1 gayawun

C.6.1.1 General information

- Form: often occurs with the “article suffix” (Merlan1994) *-bi*, an element that is best understood as a non-scalar restrictive (SchultzeBerndt2002).
- Wordhood: free morpheme.
- Etymology: transparently < *gaya* ‘today, now’ plus *-wun/-gun* ‘pertaining to’.

C.6.1.2 As a ‘still’ expression

- Merlan1994.
- Specialization: examples like (C.76–C.78), as well as (C.79) strongly suggest that *gayawun* conforms to my definition. For instance, in (C.78) the subject’s continuous sleep is contrasted with the expected polar opposite (having gotten up). Despite its transparent composition ‘relating to today, now’, *gayawun* is compatible with past tense contexts, as in (C.78), which indicates that its original meaning has become bleached. Further, albeit indirect, evidence comes from its use as NOT YET and related functions (Appendix C.6.1.4.1).
- Pragmaticity: *gayawun* seems to be compatible with both scenarios of STILL.
- Polarity sensitivity: inner negation yields NOT YET.

'Might be the child will be born dead [because of men looking at the mother], I don't know, wait and see.' (Merlan1994)

C.7 Wubuy (*nuy, nung1290*)

Introductory remarks Apart from descriptive materials, I searched Heath1980's (Heath1980) text collection. A note on the Wubuy aspect system: simplifying slightly, in the past and future Wubuy distinguishes between what Heath1984 terms “punctual” and “continuous” aspect (glossed as and PUNCT and CONT in the

C Australia

examples below). This is not an opposition of aspectual operators, but functions on the actional dimension (“lexical aspect”): the punctual aspect naturally combines with achievement and semelfactive predicates, whereas continuous is the aspect of choice for states and processes. The latter, can, however, also be construed in the punctual aspect, thereby converting them into achievements that denote either a near-spontaneous event or the entrance into a state/process. The interested reader is directed to **Heath1984** for further discussion. Lastly, Wubuy has an elaborate noun-class system. We gloss the relevant forms as **NCL** for ‘noun class’, together with a subscript of the labels used in **Heath1984**. That is, **NCL_{ANA}** stands for ‘noun class referred to by the shorthand **ANA**’.

C.7.1 -wugij

C.7.1.1 General information

- Wordhood: a bound morpheme that straddles the boundary between suffix and enclitic and which combines with hosts of various syntactic classes. **Heath1984** terms this type of marker “postposition”.
- Syntax: **-wugij** generally attaches to its focus; with the main predicate as its host, this can be interpreted as a sentence adverb.

C.7.1.2 As a ‘still’ expression

- Heath1982** (**Heath1982**; **Heath1984**); additional discussion in **vanBaar1991** (**vanBaar1991**, **vanBaar1997**) and **SchultzeBerndt2002**.
- Specialization: **-wugij** is primarily a multifaceted restrictive marker. When attached to (parts of) a main predicate or secondary predicate, **STILL** is among one of its functions. This becomes evident in examples like (C.82-C.84). For instance, in (C.82), the woman continues to see the protagonist, a situation that no longer holds soon after. Further, albeit indirect evidence comes from the robustness of the **STILL**-restrictive polysemy and the semantic parallels between these functions (Section 3.4.2).
- Polarity sensitivity: uncommon in negative contexts (**Heath1984**); where attested, this yields **NOT YET**.
- Pragmaticity: judging from **Heath1980**’s (**Heath1980**) text collection, **-wugij** appears to be compatible with both scenarios.
- Further note: There is a strong tendency for **-wugij** as **STILL** to occur with demonstratives, verbs, and predicate nominals as the host constituent, whereas the restrictive function (Appendix C.7.1.4.1) occurs mainly with nominals in non-predicative use (**Heath1984**). Other than suggested by **vanBaar1991** (**vanBaar1991**,

C.7 *Wubuy (nuy, nung1290)*

vanBaar1997), the association between function and syntactic class/function of the host is a probabilistic one rather than an absolute rule. Counterexamples include (C.91). Ex. (C.85) illustrates the use in an imperative (with a dynamic predicate).

- (C.82) Context: the protagonist is performing for a woman.

C.7.1.3 Broadly adverbial temporal-aspectual functions

C.7.1.3.1 (Iterative and) restitutive

- Heath1984.
- Heath1984 only discusses the restitutive use, which is illustrated in (C.87, C.88), and is restricted to the “punctual” aspect. There is only one good candidate for an iterative reading in the data consulted (C.86). This example borders on the restitutive (i.e. ‘threw the spear back at it’), but the discourse context suggests that what is salient is the repeated act of throwing. Like the restitutive uses of *-wugij*, (C.86) features the “punctual” aspect.

- (C.86) Context: a boy has been throwing a spear at a bush.

 (Heath1980)

C.7.1.4 Restrictive (non-temporal)

C.7.1.4.1 (Non-scalar) exclusive

- Heath1982 (Heath1982; Heath1984); additional discussion in vanBaar1991 (vanBaar1991, vanBaar1997) and SchultzeBerndt2002.
- As is common with restrictive markers, this is really a cluster of related functions. These include (but are not limited to) restricting the reference ('just, nothing but') of noun phrases (C.89, C.90) and predicates (C.91), and emphasis on the identity of place or time frame, as in C.92, C.93). The latter two examples could alternatively be interpreted as continuative subsconstituent uses ('while it is still', see Section 2.5.2.2).
- There is a strong tendency for the restrictive function to occur with nominals in non-predicative use (Heath1984).

Appendix D: Eurasia

D.1 English (eng, stan1293)

D.1.1 still

D.1.1.1 General information

- Wordhood: free morpheme.
- Etymology: < Middle English *stille* ‘without motion, without sound’, via ‘always, ever, etc.’

D.1.1.2 As a ‘still’ expression

- *vanderAuwera1991BeyondDuality* (*vanderAuwera1991BeyondDuality*, *vanderAuwera1993*, *vanderAuwera1998*), *vanBaar1997*, *Ippolito2004* (*Ippolito2004*, *Ippolito2007*), *Koenig1977* (*Koenig1977*, *Koenig1991*), *KoenigTraugott1982*, *Krifka2000*, *Lewis2019*, *Michaelis1993* and *Mittwoch1993*, among many others.
- Specialization: both the requirement for an abutting runtime and the incompatibility with inalterable states have been pointed out repeatedly in the literature (e.g. *Beck2020*; *Ippolito2007*; *Michaelis1993*; *Koenig1991*).
- Polarity sensitivity: inner negation yields NOT YET (unexpectedly late scenario).
- Pragmaticity: compatible with both scenarios.

(D.1) *When I first came to London, Piccadilly **still** had its goat.*
(Lucas, *Wanderer in London*, cited in *OED2022*)

(D.2) *The night guards had already arrived, but a few clerks were **still** hanging around...* (Pratchett, *Making money*)

(D.3) *Here is a summary of today’s changes as we move into Phase 3 of the routemap out of lockdown in Scotland. **Please still be cautious** and follow the guidelines to allow us all to progress through the dates and phases.* (found online)¹

D Eurasia

D.1.1.3 Uses on the fringes of ‘still’

D.1.1.3.1 Scalar contexts

- Ippolito2004 (Ippolito2004, Ippolito2007) and Michaelis1993.
- *Still* is encountered with monotone changes along a scale. This encompasses both decreases (D.4, D.5) and limited increases (D.6, D.7). In the latter case, an additional restrictive operator, such as *only* in (D.6) or *no more than* in (D.7), is required. The exception is a ‘no later than’ use of bare *still* (D.8); Ippolito2004 (Ippolito2004, Ippolito2007) reports that this is not acceptable to all speakers.
- Note the compatibility of *still* plus restrictive with the anterior aspect in examples like (D.7). As Michaelis1993 points out, if one assumes that such experiential uses denote a state, then scalar *only* converts the latter into a transient one (with future increases as an open possibility), thereby reconciliating them with the concept of **STILL**.

- (D.4) *We still had a few pounds in our pockets, so we very quickly decided, why not!* (Cassidy, *Indifferently*)
- (D.5) *Milwaukee well into the 1970s still had many homes that were not connected to city waters and sewer lines.* (Guenther, *The orphan that danced at the white house*)
- (D.6) *Harry has still only fed the cat.* (he has not performed greater kindness) (Michaelis1993)
- (D.7) *Heathrow said its own resources are sufficient to cope with about 85% of the traffic seen in 2019, which is roughly in line with current demand. About 1,300 people have been hired in the past six months and the number of security personnel is about the same as it was pre-pandemic. Airline ground handlers, by contrast, still have no more than 70% of pre-Covid resources available, Holland-Kaye said.* (found online)²
- (D.8) A: *Eat? It's still 10 am!*
B: *So what? I deserve a good lunch!*
A: *Lunch is for noon.*
B: *Whatever.* (Online example, cited in Ippolito2007)

D.1.1.4 Broadly adverbial temporal-aspectual functions

D.1.1.4.1 # Prospective ‘Eventually’

- Koenig1991 discusses how *still* does not allow for an ‘eventually’ use.

²<https://www.bloomberg.com/news/articles/2022-07-26/heathrow-says-passenger-cap-to-stay-until-airlines-boost-hiring> (15 March, 2023).

D.1.1.5 Additive and related functions

D.1.1.5.1 Additive

- Koenig1991, Ranger2018 and OED2022.
- This use appears to be restricted to listing environments plus additions of the same kind. Thus, the OED defines it as “[i]n addition; after the apparent ending of a series; yet.” (OED2022).

(D.9) *Some say ... others say ... still others say ...* (Koenig1991)

(D.10) Context: after having discussed two creative periods of the same writer.
Still a third type of fiction appeared in the 1950s with Mrs. Miller's successful stories of Christmas at the homes of famous men. (found online)³

D.1.1.5.2 #Further-to

- Beck2020 explicitly points out that *still* does not have the further-to use.

D.1.1.5.3 Comparisons of inequality

- Ippolito2007 Koenig1991, Lewis2019, Ranger2018 and OED2022.
- This use is rather restricted vis-à-vis scalar additive *even* in the same function. Ranger2018 points out that is is primarily found in an incrementally organized discourse, ex. (D.13) being a prototypical case.
- According to Lewis2019, this function developed out of a now obsolete distributive ‘always, ever’ sense, (D.14) being the earliest attestation.
- Syntax: forms a constituent with its focus; note how it intervenes between the article and its complement in (D.11).

(D.11) *A still greater offer came from the Dean.* (Ippolito2007)

(D.12) *A university novel is a tricky thing; an Oxford novel still trickier.*
(*The Guardian*, cited in Lewis2019)

(D.13) *For example, we would expect to find a very high proportion of cognate words in British and American English but a much lower percentage if we compare English and German and still lower if we compare English and Russian.* (BCN, cited in Ranger2018)

(D.14) Early Modern English, 16th century
spooonefull by spoonefull: bitterer and bitterer still (Lewis2019)

³<https://www.ncpedia.org/biography/miller-helen> (22 May, 2023).

D Eurasia

D.1.1.6 Marginality

- Beck2020, Koenig1977 (Koenig1977, Koenig1991), Ippolito2007, Michaelis1993 and Ranger2018.
- *Still* is compatible with readings of marginality.
- Syntax: other than phasal polarity *still*, its marginality cousin cannot occur in clause-final position.

(D.15) *I can still beat Paul. Peter is too good for me.* (Koenig1977)

(D.16) Context: commenting on a murder sentence.

In a very real sense, they [culprits] got what they deserved even though friends of the victims might argue they still got off lightly. (found online)⁴

(D.17) *I think South East Asia still counts as Asia.*

(*The Guardian*, cited in Lewis2019.)

D.1.1.7 Broadly modal and interactional functions

D.1.1.7.1 Concessive apodoses

- Bell2010, Ippolito2007, KoenigTraugott1982, Lewis2019, Michaelis1993, OED2022 and Ranger2018, among others.
- It has repeatedly been pointed out that, broadly speaking, concessive *still* underlines continued discourse cohesiveness (vis-à-vis concessive markers like *yet* or *nevertheless*).
- According to KoenigTraugott1982 and OED2022 the concessive function arose several centuries later than the phasal polarity function.
- Syntax: unlike phasal polarity *still*, concessive *still* can occupy the clause-initial position (D.20), where it is prosodically detached; Ranger2018 terms this “conclusive *still*”.

(D.18) *We told Bill not to come, but he still showed up.* (Michaelis1993).

(D.19) *Even though he studied all night, Larry still failed the test.*
(Michaelis1993).

(D.20) *... It is always the dregs of the population who show their patriotism by this sort of behaviour. Still, it is refreshing to see someone taking some sort of action.* (Lewis2019)

⁴<https://lcnme.com/opinion/letters/a-palatable-sadness/> (14 February, 2023).

D.2 French (fra, stan1290)

D.1.1.7.2 Concessive-evaluative *but still*

- Lewis2019 and Ranger2018.
- Form: in the collocation *but still*.
- Syntax: at the right periphery.
- In this use, *but still* serves as a comment on an unfavourable situation just expressed, signalling that its effect can be disregarded.

(D.21) *I don't know what they've done to it to make it spread but still.*
(BNC, cited in Lewis2019)

D.1.1.7.3 Concessive interjection

- Lewis2019 and Ranger2018.
- Form: as a stand-alone fragment/holophrase.
- Through this use, the speaker expresses their evaluation of a previously mentioned unfavourable situation as less serious than it might appear at first glance.
- As Lewis2019 shows, this use is a recent development and is rooted in the truncation of a specific of a discourse pattern involving concessive *still* (Appendix D.1.1.7.1) in initial position. In this pattern, illustrated in (D.20) above,

an undesirable, negatively-evaluated event is conceded and a less adverse mitigating event is then put forward, often containing an explicit speaker stance. Initial-position concessive *still* constructions become correlated with positive affect on the part of the speaker. (Lewis2019)

- (D.22) A: *D'ya think she'll go back to work Kevin?*
B: *No .. I don't think she will to be honest with you.*
A: <sigh>
B: *Still.*
A: *I don't blame her.* (BNC KBC, cited in Lewis2019)
- (D.23) A: *What a shame they've missed their walk together.*
B: *Yes ... still you just going back now are you?*
(BNC, cited in Lewis2019)

D.2 French (fra, stan1290)

Introductory remarks I am indebted to Maj-Britt Hansen for discussing French data with me, and to Guillaume Jacques for providing additional examples.

D Eurasia

D.2.1 encore

D.2.1.1 General information

- Wordhood: free morpheme.
- Etymology: from a Latin adverbial ‘until now, thus far’.

D.2.1.2 As a ‘still’ expression

- *vanderAuwera1991BeyondDuality* (*vanderAuwera1991BeyondDuality*, *vanderAuwera1991Borillo1984*, *Fuchs1988* (*Fuchs1988*, *Fuchs1993*), *MosegaardHansen2002* (*MosegaardHansen2008*), *HoepelmanRohrer1980*, *Koenig1977*, *Martin1980*, *Muller1975* (*Muller1975*, *Muller1991*), *Nef1981* and *VictorriFuchs1992* (*VictorriFuchs1992*, *VictorriFuchs1996*), among others).
- Specialization: the abundant descriptions, especially *vanderAuwera1998*, *Muller1975* (*Muller1975*, *Muller1991*) and *MosegaardHansen2008*, are in line with my definition. *MosegaardHansen2002* (*MosegaardHansen2002*, *MosegaardHansen2008*), *HoepelmanRohrer1980*, *Martin1980* and *Muller1975* (*Muller1975*, *Muller1991*) and point out the incompatibility with inalterable states. It is also repeatedly stated that *encore* much more strongly suggests a future discontinuation (cf. ex. D.24) than *toujours* (*Fuchs1988*; *MosegaardHansen2008*; *Muller1991*; among others).
- Pragmaticity: compatible with both scenarios; however, for the unexpectedly late scenario, *toujours* is typically used.
- Polarity sensitivity: inner negation yields NOT YET.

- (D.24) Context: from a French translation of *Snow White*. Snow White has grown up and is turning into a rival to the queen’s beauty. When the queen asks her mirror who the most beautiful mirror who the fairest of all women is, it replies:

Reine, tu es encore la plus belle.
queen 2SG COP.2SG still ART.DEF:SG.F most beautiful.F
'My queen, you are [still] as yet the fairest of them all.'

(*MosegaardHansen2008*, glosses added)

 (Martin1980, glosses added)

D.2.1.3 Uses related to other phasal concepts

D.2.1.3.1 Interrogative 'yet'

- vanderAuwerla1998, MosegaardHansen2008, Martin1980, Muller1991 and Vaelikangas1982.
- MosegaardHansen2008 points out that in Old French, *encore* as interrogative 'yet' is found in direct questions (D.29). As she indicates, this is a relict of the item's etymological meaning 'thus far.'
- In the present-day language, this use is marginal and is limited to indirect questions, as in (D.27, D.28). Ex. (D.30) illustrates NOT YET plus negative raising.

- (D.27) Context: speaking of a house that is only heated intermittently.
Je me demande s'il fait encore assez chaud

D.2.1.5 Broadly adverbial temporal-aspectual adverbial functions

D.2.1.5.1 Iterative

- Borillo1984, Fuchs1988 (Fuchs1988, Fuchs1993), MosegaardHansen2002 (MosegaardHansen2002, MosegaardHansen2008), HoepelmanRohrer1980, Martin1980, Muller1975 (Muller1975, Muller1991), Nef1981, TovenaDonazzan2008 and VictorriFuchs1992 (VictorriFuchs1992, VictorriFuchs1996), among others.
- There are no restrictions regarding aspectual operators and/or actional classes; MosegaardHansen2008, however, points out, that with atelic predicates (plus those aspectual inflections that are compatible with STILL) a phasal polarity reading is preferred, unless context suggests otherwise.
- Iterative *encore* is also attested in the absence of an overt predicative (D.37).
- MosegaardHansen2008 shows that the iterative function is attested from the earliest attestations on, albeit infrequently and rarely unambiguously. As she discusses, a case like (D.38) constitutes a likely bridging context from STILL to iteration: this example can be interpreted as either depicting a persistent series of situations, or as evoking an (expected) repetition.

- (D.35) *Marie a encore déclamé le poème.*

D.2.1.5.3 Prospective ‘eventually’

- MosegaardHansen2008, HoepelmanRohrer1980, Koenig1991 and Vaelikangas1982.
- MosegaardHansen2008 points out that this use is attested from relatively early on, roughly one century after the first clear-cut cases of *encore* as a phasal polarity marker (D.43). Ambiguous instances involving modals are attested even earlier (D.44).
- Vaelikangas1982 reports that (D.42) was not accepted by his language assistants, so there might be some variation.

D.2.1.6 Temporal connectives and frame setters

D.2.1.6.1 Time-scalar additive ('as late as')

- Borillo1984, Fuchs1993, MosegaardHansen2008, Nef1981 and VictorriFuchs1992 (VictorriFuchs1992, VictorriFuchs1996).
- Time-scalar additive *encore* invariably relates the focus to earlier alternatives on a scale of time proper ('as late as').
- As MosegaardHansen2008 points out, in cases where the adverbial denotes a point in time and the viewpoint is imperfective, such as in (D.45), the time-scalar additive use and the phasal polarity function often overlap.

D Eurasia

- The earliest attestation of time-scalar additive *encore* shows up approx. 150 years later than phasal polarity *encore*.
- Ex. (D.48) illustrates ‘as late as’ with a perfective viewpoint
- Syntax: *encore* plus temporal expression can form a single constituent (see Fuchs1993 for extensive discussion). Apart from bare ADV *encore* / *encore* ADV, this function is found intervening between presentative *voilà* and its argument (D.47).

- (D.45) *Encore en 2003 / En 2003 encore, Vincent aurait voté*

D.2.1.7 Marginality

- Deloor2012, MosegaardHansen2002 (MosegaardHansen2002, MosegaardHansen2008), Koenig1977, Muller1991, Nef1981 and VictorriFuchs1992 (VictorriFuchs1992, VictorriFuchs1996).
- This includes derogatory uses in comparisons like (D.51). MosegaardHansen2008 (D.49, D.50) as evoking a concessive nuance, namely that things are better than they might appear. In line with this observation, she observes that marginality *encore* is (near-)exclusively found with predicates that are evaluated positively.
- MosegaardHansen2008 and Muller1991 point out that the marginality use is incompatible with prototypical members of a category (#*Un moineau, c'est encore un oiseau* 'A sparrow is still a bird') and geographically central members of a territory (#*Paris, c'est encore la France* 'Paris is still France').
- MosegaardHansen2008 notes that isolated (elliptical) *encore* cannot have a marginality reading.

- (D.49) A: *Je suis bien embêté. Ma tante a légué la plus grande partie de sa fortune à un refuge animalier, et je n'aurai que 10.000 euros...*

D.2.1.8 Additive and related functions

D.2.1.8.1 Additive

- Dictionnaire, Borillo1984, MosegaardHansen2002 (MosegaardHansen2002; MosegaardHansen2008), Noelke1983 and VictorriFuchs1992 (VictorriFuchs1992, VictorriFuchs1996), among others.
- This includes the collocations *non seulement ... mais (encore)* 'not only ... but also' and the disjunctive connective *ou encore*, which marks the last element in a series of non-exclusive alternatives (D.55).

D.2 French (fra, stan1290)

- In diachronic terms, **MosegaardHansen2008** observes that *encore* as additive ‘in addition’ shows up from very early on, even before iterative uses. The first attestation is given in (D.57). As **MosegaardHansen2008** discusses,

it is likely to be motivated directly by the cumulative element of meaning that inheres in phasal *encore*, such that –in spite of the telicity of the verb *ocire* –[it] may be loosely understood as meaning that the Saracen ... remains in a ‘killing-mode’.

Encore as an additive with alternatives of the same kind ‘another’, shows up considerably later, ex. (D.58) featuring a likely bridging context. Another bridge may be found in examples ambiguous between ‘another’ and an iterative reading (D.59).

- As repeatedly observed in the literature, there is a strong association between additive *encore* and an incrementally unfolding discourse. However, as **MosegaardHansen2008** highlights, this does not equal a sequential ordering of events. Thus *puis* ‘then’ in (D.54) can be understood in reference to the order of mentioning.
- Syntax: when additivity pertains to another entity/quantity of the same type, *encore* is usually a syntactic sister to the focus.

D.2.1.8.2 Comparisons of inequality

D.2 French (fra, stan1290)

- Dicctionnaire, Borillo1984, MosegaardHansen2002 (MosegaardHansen2002, MosegaardHansen2008), Muller1991, Price2013 and VictorriFuchs1992 (VictorriFuchs1992, VictorriFuchs1996).
- Comparisons of inequality in French are expressed via *plus* ‘more’ (except for certain suppletive comparative forms), and the standard of comparison, if overtly mentioned, is introduced by *que* ‘than’. Addition of *encore* yields ‘even more’.
- *Encore* modifies not only comparisons *sensu stricto*, but also combines with degree achievements (D.62) and other verbs that express a comparison of degrees, such as *preferer* ‘prefer’ in (D.63).
- MosegaardHansen2008 points out several differences between *encore* in thus use vis-à-vis *toujours* in the same context. First, *encore*, but not *toujours*, suggests that the degree held by the comparee is far on the upper end of the relevant scale. Secondly, *encore* can be used to compare the same entity across two points in time, as in (D.61), whereas *toujours* implies that an increase in degree has been observed at least once before.
- Syntax: forms a constituent with the degree expression. For instance, in (D.60) it occurs not in its usual post-auxiliary position, but immediately precedes *mieux* ‘better’.

(D.60) *Le premier roman de Duschnock a eu beaucoup de succès. Le deuxième s'est vendu encore mieux.*

D.2.1.9 Restrictive (non)-temporal

D.2.1.9.1 Scalar restrictive 'if at least': *encore si/si encore*

- Dicctionnaire, Deloor2012 and VictorriFuchs1992 (VictorriFuchs1992, VictorriFuchs1996).
- Form: in the collocations *encore si* and *si encore* introducing a counterfactual protasis.
- VictorriFuchs1996 point out that this use can be paraphrased with *encore* in its marginality use (Appendix D.2.1.7) in the apodosis, e.g. (D.64) as (D.68). In line with this observation, they note that *encore* and *si* are sometimes separated (D.66).
- The apodosis is often ellided, as in (D.67)

D.2.1.10 Broadly modal and interactional functions

D.2.1.10.1 Follow-up questions

- MosegaardHansen2002 (MosegaardHansen2002, MosegaardHansen2008), Noelke1983 and Vaelikangas1982.
- In this function, which is an extension of the iterative use, *encore* operates on the speech-act level by highlighting that a similar question has been asked before and it signals that ideally it would not be necessary to ask again. This can yield an attenuating reading, as in (D.69). Frequently, however, this use conveys annoyance, as in (D.70).
- Syntax: in questions, dislocated to the right.

- (D.69) *Quel est votre nom, encore?*
 which COP POSS.2PL:SG name, still
 'What was your name, again?' (MosegaardHansen2002, glosses added)
- (D.70) A: *Seigneur Aristote, peut-on savoir ce qui vous met si fort en colère?*
 'My Lord Aristote, may one know what makes you so angry?'

D Eurasia

B: *Un sujet le plus juste au monde.*
 'A subject that is as reasonable as can be.'

A: *Et quoi, encore?*
 and what still
 'And what IS that?' (Molière, *Le mariage forcé*, cited in
 MosegaardHansen2008, glosses added)

D.2.1.10.2 Concessive protases: *encore que*

- Dicctionnaire, MosegaardHansen2002 (MosegaardHansen2002, MosegaardHansen2008), Morel1996, and VictorriFuchs1992 (VictorriFuchs1992, VictorriFuchs1996).
- Form: in collocation with the subordinator *que*. The clause it introduces may take either the indicative or the subjunctive mood, depending on the givenness of the situation. Typically, the *encore que* protasis follows the apodosis. While it can also precede, Morel1996 and MosegaardHansen2008 point out that this is rare in contemporary French and has an archaic feel to it.
- These (postposed) *encore que* concessives are rectificational and work on the speech-act level: the speaker indicates that another assertion may not have been justified, because it could be invalidated by the condition introduced by *encore que*.
- In prosodic terms, *encore que* tends to be set off, both from the preceding clause, and from the clause it governs.
- MosegaardHansen2002 (MosegaardHansen2002, MosegaardHansen2008) traces this collocation back to the 16th century.

(D.71) *Max aura une très bonne note, encore que son prof ne l'aime guère.*

D.2.1.10.3 Concessive apodoses (i): *encore* plus “clitic inversion”

- Dictionnaire and **MosegaardHansen2002** (**MosegaardHansen2002**, **MosegaardHansen2008**, **MosegaardHansen2016**).
- Form/syntax: in clause-initial position, with subject clitics surfacing in an “inverted” (diachronically older, but preserved in formal registers and with certain conjunctival adverbials) order. In the vast majority of cases, the verb is *falloir* ‘be necessary’, and *encore faut-il* ‘nonetheless it is necessary’ (D.73) comes close to a frozen collocation (**MosegaardHansen2002**, **MosegaardHansen2008**).
- In terms of its pragmatic contribution, **MosegaardHansen2008** describes this structure as

an essentially additive marker, which indicates that the preceding discourse has not exhausted the topic, and that there are thus still things to be said before the first sub-maxim of Quantity (“Say as much as is required”) can be considered to have been observed.

- (D.73) “*Une enquête menée par une psychologue auprès de ces familles montre que les enfants ont tout à y gagner*” , précise-t-il.

D.2.1.10.5 Concessive interjections: *encore que, et encore*

- Dictionnaire, Deloor2012, MosegaardHansen2008 and VictorriFuchs1996.
- These are holophrastic uses of the concessive collocations *encore que* (Appendix D.2.1.10.2; ex. D.77) and *et encore* (Appendix D.2.1.10.4; ex. D.78). Like their “full-fledged” counterparts, they serve the pragmatic functions of indicating that the speaker might not have been justified in making the preceding statement (*encore que*) and of countering possible inferences (*et encore*).
- Without doubt, this is (partially) motivated by the fact that the *encore que* and *et encore* occur in clause-initial position and tend to set off in prosodic terms.

(D.77) A: *Le bush, le désert australien, tu aimes?*

D.2.2 toujours

D.2.2.1 General information

- Wordhood: independent grammatical word.
- Etymology: < ‘every day’

D.2 French (fra, stan1290)

D.2.2.2 As a (borderline) STILL EXPRESSION

- Dicctionnaire, vanderAuwera1998, Fuchs1988, MosegaardHansen2002 (MosegaardHansen2002, MosegaardHansen2008), Muller1975 (Muller1975, Muller1991) and Vaelikangas1982, among many others.
- Specialization: while some authors (e.g. vanderAuwera1998) treat *toujours* as a full-fledged STILL expression that is dedicated to the unexpectedly late scenarios, others (e.g. MosegaardHansen2008; Fuchs1988) argue that it does not evoke a subsequent discontinuation scenario. I thus treat *toujours* as a borderline case of a STILL expression.
- Polarity sensitivity: inner negation yields (a notion close to) NOT YET.
- Pragmaticity: if taken to be a STILL expression, *toujours* would be specialized for the unexpectedly late scenario.
- Further note: MosegaardHansen2008 points out that *toujours* as a marker of persistence is first attested from the 13th century on. It is likely that her first attestation, given in (D.81), still involves a frequentative notion 'at each attempt...':

D.2.2.6 Additive and related uses

D.2.2.6.1 Comparisons of inequality

- MosegaardHansen2008.
- Concerning the structure of comparative constructions in French, see Appendix D.2.1.8.2. Addition of *toujours* yields ‘even more’. This includes the use with degree verbs, as in (D.90).
- MosegaardHansen2008 points out that, unlike *encore* (Appendix D.2.1.8.2), *toujours* cannot be used in comparisons of inequality that lack a temporal development.
- According to MosegaardHansen2008 unambiguous instances of *toujours* in comparisons of inequality are attested about four centuries after the development of the persistive function. She points to examples like (D.91) as possible bridging contexts.
- Syntax: forms a constituent with the degree phrase; for instance, in (D.89) it occurs between the preposition *avec* ‘with’ and its complement.

(D.89) *Elle me regardait avec toujours plus d'-inquiétude.*

D.2.2.7 Broadly modal and interactional uses

D.2.2.7.1 Concessive apodoses: *toujour est-il que*

- Fuchs1988, MosegaardHansen2008 and Morel1996.
- Form: in the fixed expression *toujours est-il que* ‘still COP.3SG 3SG.M SUBORD’ ‘still it’s the case that’. That this phrase is petrified in the present-day language becomes evident in the fact that the predicate in the clause it governs can only surface in the present indicative and can neither be negated, nor can the clause form an interrogative.
- This fixed expression can either mark a return from a digression, as in (D.92), or a weak form of concession in which the speaker remits to only stating the facts, without taking a stance; see (D.93).

- (D.92) *Il est possible que Jean réussisse brillamment à son examen.*

D Eurasia

D.2.2.7.2 Speech-act ‘in any case’

- **MosegaardHansen2008**.
- In this function, *toujours* has an ‘in any case’ reading similar to the one discussed in Appendix D.2.2.5, but functioning on the speech-act level.
- According to **MosegaardHansen2008**, this use is first attested around five centuries after the persistive function. She points out that it “probably arose as a type of afterthought, whereby the speaker could comment on the status of her own speech act as valid independently of the contents of previous discourse.”
- Syntax and prosody: always right-detached.

- (D.94) *Raboliot reconnut Sarcelotte à son parler; il fut heureux d'entendre, après longtemps, son nasillement cordial et gai. – Il y a une pièce que je t'attends, dit Sarcelotte. On peut causer? Rien qu' à l' accent du camarade, Raboliot devina tout de suite. Un tressaillement le parcourut, le chauffa de la nuque aux talons. Il demanda, un peu anxieux:*
‘Raboliot recognized Sarcelotte by the way he talked; he was happy to hear his hearty and cheerful nasal twang after so long “I’ve been waiting for you for quite a while”, said Sarcelotte. “Can we talk?” Just by the tone of his friend’s voice, Raboliot guessed it immediately. He shuddered, became hot from head to toe. A bit anxiously, he asked,’

D.3 German (deu, stan1295)

D.3.1 noch

D.3.1.1 General information

- Wordhood: free morpheme.
- Etymology: < Proto-Indo-European **nū-kwe* ‘now-also’.
- Further note: not to be confused with disjunctive *noch* ‘nor’, which has a different etymology.

D.3.1.2 As a ‘still’ expression

- **Abraham1977** (*Abraham1977, Abraham1980*), **vanderAuwera1991BeyondDuality** (*vanderAuwera1991BeyondDuality, vanderAuwera1993, vanderAuwera1998*),

D.3 German (deu, stan1295)

Beck2016 (Beck2016, Beck2019 Beck2020), Doherty1973, Helbig1994, HoepelmanRohrer1981 and Loebner1989, among many others.

- Specialization: several descriptions, such as those by Abraham1977, Beck2016 (Beck2016, Beck2019, Beck2020), Doherty1973 and Klein2018, explicitly address the two components of my definition.
- Polarity sensitivity: inner negation yields NOT YET.
- Pragmaticity: usually augmented by *immer* > *immer noch/noch immer* for the unexpectedly late scenario.
- Syntax: only phasal polarity *noch* can (on its own) occur in the forefield of the sentence. There it strongly suggests an imminent change (D.97).
- Further note: can be used as an elliptical single-word utterance. Like *noch* in forefield position, this is only available for the phasal polarity function and emphasises the possibility of an imminent discontinuation (D.98). Ex (D.99) illustrates the use in an imperative.

D.3.1.3 Uses on the fringes of 'still'

D.3.1.3.1 Scalar contexts

- vanderAuwera1991BeyondDuality (vanderAuwera1991BeyondDuality, vanderAuwera1991Beck2020, DWDS, Duden, KoenigEtAl1993 Loebner1989 (Loebner1989, Loebner1999), MetrichFaucher2009, Shetter1966 and Vaelikangas1982).
- The question of whether *noch* in scalar contexts is to be separated from its phasal polarity function has sparked intense discussion in the literature, especially vanderAuwera1991BeyondDuality (vanderAuwera1991BeyondDuality, vanderAuwera1993) vs. Loebner1989 (Loebner1989, Loebner1999). A crucial element to this debate is that, with narrow focus on a scalar change, *noch* can only have a reading of a decrease (D.100, D.101). It does not allow for a restrictive 'still only, no more than' reading (be it on its own or in combination with an 'only' marker) which is conveyed by a separate lexical item *erst* 'no more than', lit. 'first, erstwhile'. However, this restriction applies only to "bare" *noch*. Its augmented, emphatic (unexpectedly late) variants *immer noch/noch immer* are amply attested with scope over a restrictive marker in increase contexts; see (D.102, D.103).
- The fixed expression *noch ... hin sein* 'still be ... off' is sometimes encountered with the scalar predicate left implied, as in (D.102).
- The collocation (complex particle) *nur noch* 'only still' conveys the idea of 'as little as ... left', as in (D.105). Similarly *kaum noch* 'hardly still' conveys a high degree of reduction of intensity or frequency (D.106).
- Syntax: scalar *noch* can form a single constituent with the focus. Note, for instance, *noch* and *wenige Meter* 'a few meters' together occupying the initial position of a V2 clause in (D.101)

⁹<https://www.finanzfrage.net/g/frage/bargeld-ungueltig-zum-umtausch-nach-schweden-verschicken> (30 March, 2023).

D.3.1.3.2 ‘Thus far always/every(one)’

- KoenigEtAl1993 and MetrichFaucher2009.
- Form: in collocation with a focus that includes or consists of a universal quantifier (incl. *immer* ‘always’) and a predicate in the analytical anterior or the past tense.
- This collocation expresses a generic rule that has been true until utterance time (or another evaluation time) ‘thus far always, thus far everyone’.
- The meaning of this collocation can be explained through coercion of a generic or experiential state into an alterable one, which, in turn, is facilitated by focus on the universal quantifier. In terms of usage, it most likely goes back to

¹²<https://netzpolitik.org/2021/kontaktverfolgung-in-den-semesterferien/> (08 March, 2023).

D.3 German (deu, stan1295)

analogy with ‘not ever (yet)’ statements, in which *noch* forms part of the expression for NOT YET (D.110), as well as with the collocation *schon immer* ‘since always’, lit. ‘already always’). The latter, in turn, builds on the ALREADY expression *schon* in scalar contexts.

- Syntax: forms a constituent with its focus, either preceding or following it.

D.3.1.4 Broadly adverbial temporal-aspectual functions

D.3.1.4.1 Iterative (and restitutive) via increment

- Duden, DWDS, KoenigEtAl1993, MetrichFaucher2009, Nederstigt2003, Umbach2012, Sauerland2009 and Shetter1966.
- Form: in collocation with the event quantifier *mal* ‘time(s)’; stylistic variants with and without the indefinite article. Additionally, there is a form *nochmals*, featuring the adverbial derivation *-s* (D.114, D.115). Lastly, this collocation also underlies the compound adjective *noch-mal-ig* ‘still-time-ADJ’ ‘repeated’.
- Aside from iteration (D.112–D.114), this use also has been described as having restitutive readings in examples like (D.115, D.116). My own judgement suggests that these and similar examples evoke a transitory restitution of a state. This is particularly salient in (D.116), which could be continued *bevor sie ihn dann tranken* ‘before eventually drinking it’. Similarly, (D.115) could be continued *bevor sie dann losfuhr* ‘before she set off’. This suggests that the restitutive readings simultaneously evoke the “further-to” use of *noch* Appendix D.3.1.7.2), in which case (*ein*)*mal* serves not as an event quantifier but as ‘for a moment, just briefly’.

- (D.112) *Lass uns noch mal klingel-n.*
let 1PL.ACC still time ring-INF
'Let's ring the bell again.'
(Duden, glosses added)

D.3.1.4.2 Prospective ‘eventually’

- Abraham1977, (Abraham1977, Abraham1980, vanderAuwera1993, DWDS, Doherty1973, Duden, Helbig1994, HoepelmanRohrer1981, Koenig1977 (Koenig1977, Koenig1991), KoenigEtAl1993, Loebner1989, MetrichFaucher2009, Shetter1966 and Vaelikangas1982; also see Vandeweghe1984 on the Dutch cognate *nog*)
- This reading is forced when *noch* is combined with emphatic *schon* (‘no doubt’, lit. ‘already’) and adverbials like *schließlich* ‘eventually’ or *eines Tages* ‘one day’.
- This reading is available with telic predicates (D.117, D.118) and atelic predicates (D.119).
- As Shetter1966 points out, in combination with modals (D.120) and the copula-plus-infinitive constructions (D.121) there is often ambiguity between a persistent possibility/necessity and prospective ‘eventually’.
- Ex. (D.122) illustrates the combination with a negated predicate.

D.3.1.5 Temporal connectives and frame setters

D.3.1.5.1 Persistent time frame

- DWDS, Beck2016 (Beck2016, Beck2019, Beck2020), Duden, Helbig1994, Koenig1977, KoenigEtAl1993, Loebner1989, MetrichFaucher2009, Shetter1966 and Vaelikangas1982
- As Loebner1989 points out, this use can be paraphrased as 'it is still ... when the situation occurs', and is restricted to time specifications that include an established or salient topic time. The latter can be mediated by place-to-time metonymy (D.126).
- This use often gives the impression of relative earliness. Accordingly, the *Duden* dictionary (Duden) describes it as "... den Umständen nach früh [early for the circumstances given]". A similar description is given by Helbig1994. As Beck2020 shows, this meaning component is defeasible. This is illustrated in (D.128).
- This use is also frequent in combination with expressions of precedence, as in (D.127). This can be explained by the fact that *noch* in this function generally evokes an idea of precedence, e.g. 'before the end of the negotiations' in (D.123), 'before the end of the day' in (D.124), or 'before death' in (D.125). As Shetter1966 points out, in this case *bevor/vor/ehe* is stressed, which clearly differentiates *noch vor Ostern* 'before Easter' in (D.127) from *noch vor hundert Jahren* 'as recently as a hundred years ago' in (D.130).
- Syntax: forms a constituent with the temporal expression, either preceding or following it; note, for instance, their co-occurrence in the forefield position of a V2 clause in (D.128).

(D.123) Context: a 1989 article newspaper headline and a subsequent paraphrase.

D.3.1.5.2 Time-scalar additive ('as late as')

- vanderAuwera1993, Beck2016 (Beck2016, Beck2019, Beck2020), DWDS, Duden, HoepelmanRohrer1981, Klein2018, Koenig1977 (Koenig1977, Koenig1979, Koenig1991), KoenigEtAl1993, MetrichFaucher2009 and Shetter1966.
- In this function, *noch* consistently relates the focus to lower alternatives on a scale of time proper ('as late as'). Times may be mediated by metonymy (D.132, D.133). Shetter1966 and Koenig1979 point out that with reference to the past and present, this can normally give rise to a reading of recency. As Koenig1979 points out, with future reference the opposite occurs, as in (D.134).

¹⁷<https://www.verdi.de/service/fragen-antworten/++co++3f41ec44-a247-11e0-42ae-00093d114afd> (26 April, 2022).

D Eurasia

- Similar to **Mosegaard Hansen 2008** on French *encore* (Appendix D.2.1.6.1), **Shetter 1966** observes a functional overlap between this use and **STILL** when the adverbial in question denotes a point in time. However, as **Beck 2020** points out, even with an imperfective vantage point, time-scalar additive *noch* does not require that the situation held before; see (D.131). What is more, time-scalar additive *noch* is perfectly compatible with a perfective viewpoint (D.129).
 - Syntax: can form constituent with its focus. Note, for instance, them occupying the forefield of V2 clauses together in (D.129–D.134).

 decision.' (Koenig1979)

D.3.1.5.3 *Noch* and the source of persistent states

- Mustajoki1988 and Shetter1966.
- There is a recurrent usage pattern that consists of *noch* in combination with an expression indicating the source of some state, as in (D.135–D.137). As observed by Shetter1966, *noch* can be said to serve a dual function here. On the one hand, it signals the persistence of the state in question, while at the same time it associates with the temporal predication about its source ('from while ... still ...'). Together this yields a reading strikingly similar to the 'as far removed as' type of time-scalar additive (Section 2.5.2.3).
- Occasionally, in this pattern *noch* is attested as a syntactic sister to the adpositional phrase, as in (D.137). This type of adverbial modification on the phrase level is, however, not restricted to *noch*, nor to the larger set of phasal polarity expressions (see ZifonunEtAl1997).

- (D.135) *Ich habe eine natürliche Scheu vor Polizisten und Staabsoffizieren.*
 'I have a natural shyness of policemen and staff officers.'

 O. lie.3SG just still in Lower_Saxony
 'Osnabrück is still Lower Saxony (i.e. it is a marginal case of being in the Lower Saxony territory)' (Umbach2012, glosses added)

D.3.1.7 Additive and related functions

D.3.1.7.1 Additive

- Beck2016 (Beck2016, Beck2020), DWDS, Doherty1973, Duden, Eckardt2006, Helbig1994, HoepelmanRohrer1981, Klein2018, Koenig1977 (Koenig1977, Koenig1991), KoenigEtAl1993, MetrichFaucher2009, Nederstigt2003, Umbach2009 (Umbach2009, Umbach2012) and Shetter1966.
- Stressed *noch* indicates addition of an entity of the same kind (D.143).
- It has been repeatedly pointed out (Eckardt2006; Grubic2018; Koenig1991; Nederstigt2003; Umbach2012) that additive *noch* is associated with incremental discourse (sequential events, shifts in topic situations, and the like) vis-à-vis the parallelisms invoked by additive *auch*, and that the two items are consequently not always freely exchangeable. However, they can co-occur (*auch noch*); see (D.146). What is more, *noch* does not mark temporal sequentiality, as highlighted by Umbach2012. For instance, *dann* 'then' in (D.144) can either refer to the order of consumption or the order of mentioning.
- In narrative discourse, the incremental pattern often goes together with the last in a series of events. For instance, in (D.147) *noch* anticipates the subsequent closure of the relevant section of the novel. This brings such instances markedly close to the further-to use (Appendix D.3.1.7.2).
- Nederstigt2003 and Shetter1966 point out that examples like (D.145) are ambiguous between a phasal polarity and additive interpretation.

D.3.1.7.2 Further-to

- Beck2019, Duden, Klein2018, KoenigEtAl1993, Nederstigt2003, Shetter1966, Umbach2012 and Vaelikangas1982; also see Vandeweghe1984 on the Dutch cognate *nog*.
- Further-to readings of *noch* differ from purely additive ones in that they allow for an easy accommodation in out-of-the-blue utterances. However, many authors do not make this distinction.
- This reading can be enforced through items like *doch*, a discourse marker that indicates a revision of previous information or assumptions (see RojasEsponda and references therein), as in (D.151).

D.3.1.7.3 Scalar additive

- DWDS, Koenig1991 and PersohnSchonNoch.
- As I discuss in PersohnSchonNoch, *noch* as a scalar additive works on a scalar model of sufficiency. It requires a high focus value, i.e. it constitutes a BEYOND operator in GastvanderAuwera2011's (GastvanderAuwera2011) typology. However, this value has to be rung on a negatively defined scale, such as the degrees of *incredulity* in (D.154).
- The denotation of the associated constituent is often undesirable (D.153, D.154).
- Syntax: forms a constituent with its focus.

(D.152) Context: there are no more innocent things.

D.3.1.7.4 Comparisons of inequality

- DWDS, Duden, Helbig1994, Klein2018, Koenig1977 (Koenig1977, Koenig1991), KoenigEtAl1993, MetrichFaucher2009, Umbach2009 (Umbach2009, Umbach2012) and Shetter1966.
- *Noch* adds the scalar additive notion of 'even' to comparisons of inequality.
- Umbach2009 points out that stress may either fall on *noch* or on the property-denoting predicate, thus linking *noch* in comparisons to its additive function (Appendix D.3.1.7.1); a similar observation is found in MetrichFaucher2009.
- This use extends to predicates with the meaning of 'surpass' (D.157, D.158) and degree achievements derived from comparative adjectives (D.159).
- Syntax: forms a constituent with its focus.

(D.155) *Der Betätigung-s-bereich für Physiotherapeut-en*

D.3.1.8 Broadly modal and interactional functions

D.3.1.8.1 Universal concessive conditionals: *noch so*

- DWDS, Duden, HaspelmathKoenig1998, Helbig1994, KoenigEtAl1993, MetrichFaucher2009 and Shetter1966.
- Form: in collocation with *so* ‘so, thus, that much.’
- In this function *noch* is stressed, which links it to the additive use with increments of the same kind (Appendix D.3.1.7.1). A link to additivity has also been proposed by HaspelmathKoenig1998, MetrichFaucher2009 and Shetter1966. The second item of the collocation, *so* has among its functions that of signalling a high, potentially infinite degree of some property (e.g. DWDS). That is, the universal quantification effect can be understood as going back to lq with any additional degree conceivable’. In diachronic terms, according to DWDS, this collocation started out as *noch einmal so* ‘by an additional same degree’.

D Eurasia

in Shetter1966, glosses added)

D.3.1.8.2 ‘Remind me again’ questions: noch/noch (ein)mal

- DWDS, Iwasaki1977, KoenigEtAl1993, MetrichFaucher2009 and Sauerland2009
- Form: both in the iterative-via-addition (Appendix D.3.1.4.1) collocation *noch (ein)mal* (D.166) and as plain *noch* (D.165). The latter is particularly common in monological question.
- For plain *noch*, Iwasaki1977 discusses how this use shows traces of phasal polarity in that it signals the speaker’s belief that they should still be able to recall the information in question, although they no longer do.

(D.165) Context: A waiter has forgotten the orders of each person.

Was hat **noch-mal** jeder bestell-t?
what have.3SG still-time everyone order-PTCP
'Remind me again, what did each of you order?' (Sauerland2009)

(D.166) ...dann pflegte der Onkel das Lied von den heimatlosen Matrosen durchs
Haus zu schmettern. Er hatte es einst auf seinen Seereisen gelernt.

'... the uncle then used to belt out the song of the homeless seafarer. He
had learned it a long time ago during his sea voyages'

'[Asking himself:] How did the second verse go?' (von der Vring, *Spur
im Hafen*, cited in Iwasaki1977, glosses added)

D.3.1.8.3 Lamenting exclamations

- Duden and MetrichFaucher2009.
- Form: in exclamations with (declarative) V2 order and a contrastive (i.e. fo-cussed) topic.
- In this use, *noch* adds emphasis and emotive notions such as melancholy or re-gret about the perceived loss of some quality. Duden points out, this use also invites agreement on side of the hearer. As observed by MetrichFaucher2009, the phasal polarity origins of this use are clearly observable in some cases, e.g. in (D.167), whereas a shift towards emotive functions dominates in others, such as in (D.168, D.169). However, even such instances latently evoke the margina- lity use of *noch* (e.g. a last outpost of reliability of quality in ex. D.168).

(D.167) Das war-en **noch** Zeit-en!

 'See, that's (still) real quality!'
 (MetrichFaucher2009, glosses added)

D.3.1.8.4 Booster: *noch (ein)mal, nochmals*

- DWDS, Duden and MetrichFaucher2009.
- The iterative collocation *noch (ein)mal* and its variant *nochmals* (Appendix D.3.1.4.1) are used as boosters in directive speech acts, exclamations and curses.
- A bridging context can be found in cases like (D.172), where the notion of repetition is transferred to the speech-act level, thereby reinforcing the command.

D.4 Hebrew (Modern) (heb, hebr1245)

Introductory remarks I am indebted to Jael Greenberg and Itamar Francez for long discussions of Hebrew data and for providing numerous examples, and to Jens G. Fischer for helping with glosses and transliteration.

D.4.1 *fadayin*

D.4.1.1 General information

- Form: variously transcribed as *fadayin*, *'adayin*, *adayin*; עֲדַיִן/עֲדֵיִן in Hebrew script.
- Wordhood: free morpheme.
- Etymology: likely < Aramaic *zedayin* ‘then, thereupon’

D.4.1.2 As a ‘still’ expression

- **Tobin1985** and **TsirkinSadan2019**.
- Specialization: the descriptions by **Tobin1985** and **TsirkinSadan2019** meet my definition.
- Polarity sensitivity: inner negation yields NOT YET.
- Pragmaticity: the data allow for no conclusions.
- Syntax: typically preceding the predicate.

- (D.173) *Izevel nahag-a ke'ilu hi fadayin paħad-a.*
I. act.PST-3SG.F as_if 3SG.F still afraid.PST-3SG.F
'Jezebel acted as if she were still afraid.'
(Glinert1989, glosses added)

D Eurasia

D.4.1.4 Broadly adverbial temporal-aspectual functions

D.4.1.4.1 # 'eventually', prospective

- Koenig1991 discusses that *od* (D.4.2.4.1), but not *fadayin* has the prospective 'eventually' function.

(D.180) Context: You have to catch a flight.

Te-maher! #Ata fadayin te-axer.
2SG.M-hurry_up.FUT 2SG.M still 2SG.M-be_late.FUT
intended: 'Hurry up, you'll end up late.' (Yael Greenberg, p.c.)

(D.181) Context: uttering a threat.

Ata fadayin ti-r'e ma yi-qre le-xa.
2SG.M still 2SG.M-see.FUT what 3SG.M-happen.FUT to-2SG.M
intended: 'You'll see yet what you get out of it.' (Yael Greenberg, p.c.)

D.4.1.5 Marginality

- TsirkinSadan2019.

(D.182) A: I am annoyed because my rich aunt has left the better part of her fortune to an animal shelter, and only 10.000€ of inheritance go to me.

B: *10.000 Euros fadayin sxum yafe.*
10.000 Euros still sum(M) good.M
'10.000 Euro is still a good sum.' (Yael Greenberg, p.c.)

(D.183) Context: talking about tennis skills.

Et Paul ani fadayin yaxol le-natseah.
ACC P. 1SG still can.SG.M to-beat
'Paul I can still beat (but other players might be too good for me).'
(Yael Greenberg, p.c.)

(D.184) *Ha'im ha-rama ha-nemux-a be-yoter*

ART.DEF-standardization ART.DEF-European for-safety?
'Is the lowest level allowed still within the European standard for safety?' (Knesset protocol, cited in TsirkinSadan2019)

D.4 Hebrew (Modern) (heb, hebr1245)

(D.185) Context: Viewed from Tel Aviv.

Heifa hi ɻadayin be-Yisrael, aval Tsur hi kvar be-Levanon.

H. 3SG.F still at-Israel but Tyros 3SG.F already at-Lebanon
'Haifa is still in Israel, but Tyros is already in Lebanon.'

(Yael Greenberg, p.c.)

D.4.1.6 Broadly modal and interactional functions

D.4.1.6.1 Concessive apodoses

- **TsirkinSadan2019.**
- Note the perfective viewpoint in (D.188), which would be incompatible with the notion of STILL, as well as the negation within the scope of *ɻadayin*.
- Syntax and prosody: can occur in clause-initial position, as in (D.186), together with comma-intonation.

(D.186) *Laqaħ-ta šir ve-tirgam-ta – beſetsem*
take.PST-2SG.M poem and-translate.PST-2SG.M in_fact

le-alternativa.
 to-alternative
 '(Tzipi) Livni's name helped the Labor Party to present itself in the
 public opinion as an alternative. It still did not turn it into one.' (Yedi ot
Ahoronot, cited in TsirkinSadan2019)

D.4.1.6.2 Concessive interjection

- *sadayin* can be used in isolation, as a concessive interjection.
- The fact that *sadayin* as a concessive conjunction typically occurs initial position and is prosodically separated from the rest of the clause (D.4.1.6.1) indicates a development parallel to that of English *still* (D.1.1.7.3).

- (D.189) A: *Rina lo nehmada elay.*
 'Rina is not nice to me.'
 B: *Aval hi omeret lex a šalom kol boqer.*
 'But she grets you "Hello" every morning.'
 A: **sadayin...**
 'Still...' (Yael Greenberg, p.c.)

- (D.190) A: *Anaḥnu holxim le-āher la-hofera!*
 'We are going to be late to the show.'
 B: *Lo batuah. Šaxšav ha-ramzor hofex le-yaroq.*
 'That's not certain. The traffic light is turning green now.'
 A: **sadayin...**
 still
 'Still...' (Yael Greenberg, p.c.)

D.4.2 ſod

D.4.2.1 General information

- Form: also transcribed as *od*, 'od; וָעַד in Hebrew script.
- Wordhood: free morpheme. Usually invariable, but in formal registers it can take subject suffixes in the affirmative present tense, as in (D.192).
- Etymology: attested in essentially the same functions in Biblical Hebrew. Cognates in other Semitic varieties have iterative and restitutive functions, as well as meanings pertaining to circular motion and being accustomed (BrownEtAl).

D.4 Hebrew (Modern) (heb, hebr1245)

D.4.2.2 As a ‘still’ expression

- Glinert1976 (Glinert1976, Glinert1989), Greenberg2012, Schwarzwald2001, Thomas2018, Tobin1985 and TsirkinSadan2019.
- Specialization: the various descriptions, when taking together, indicate that this marker is comparable to English *still* or German *noch*.
- Polarity sensitivity: inner negation yields NOT YET, outer negation yields NO LONGER.
- Pragmaticity: the data allow for no conclusions.
- Syntax: fixed, preceding the predicate.

(D.191) *Be-šeš va-ḥetsi Dani fod yašan.*
 at-six and-half Danny still sleep.PST.3SG.M
 ‘At half past six Danny was still asleep.’ (Greenberg2012)

(D.192) *Sara fod-ena zoxer-et.*
 S. still-3SG.F rember-3SG.F
 ‘Sara still remembers.’ (Glinert1989, glosse added)

D.4.2.3 Uses on the fringes of ‘still’

D.4.2.3.1 Scalar contexts

- *fod* is attested in scalar contexts, encompassing both decreases (D.193, D.194) and limited increases (D.195–D.197). Note the lack of need for an ‘only’ marker in (D.196, D.197).

(D.193) Context: from a mountain biking guide.
Im kvar ktsat laḥuts lanu ve rotsim limšox la-rexev az mumlats limšox sim ha-simun švilim ha-yaroq ve-ha-mitpatel...

B: *Lo, hi fod bat 12.*

NEG 3SG.F still of_age(F) 12

‘No, she’s (still) only 15.’ (Itamar Francez, p.c.)

D.4.2.4 Broadly adverbial temporal-aspectual functions

D.4.2.4.1 Prospective ‘eventually’

- FrancezOd, Koenig1991 and Tobin1985.
- As FrancezOd points out, in this function, *fod* can modify a negated predicate without yielding NOT YET, as in (D.200).
- FrancezOd observes that this use is already found in Biblical Hebrew, as in (D.201).
- Syntax: in pre-predicate position.

(D.198) *Al tafsiq le-hitamen! B-a-sof fod*
 PROH 2SG.M.stop.FUT to-practice.INF at-ART.DEF-end still
te-natseah ot-i.
 2SG.M-beat.FUT ACC-1SG

priority(F) upper-F to-coverage.cs ART.DEF-trial

‘The very next day after Eichmann was captured, [the newspaper] *This World* decided to give top priority to covering the trial.’

(found online, glosses added)³⁵

(D.208) Context: a student with the ardent desire to become a doctor did not get accepted into medical school at the first try. He applied again, and good the good news that this time he was accepted for admission in Berlin got to him while he was travelling. (see ex. D.351)

***sod** lemoħorat hu fazar le-Berlin.*

still next_day 3SG.M leave.PST.3SG.M to-B.

The very next day, he set off for Berlin.’ (Itamar Francez, p.c.)

D.4.2.5.2 Time-scalar additive ‘as far removed as as’

- *sod* has a time-scalar additive use, in which it relates the focus to lower alternatives on a scale of temporal distance (‘as far removed as as’).
- Unlike markers such as Serbian-Croatian-Bosnian *još* (D.11.1.5.2), *sod* does not have an additional reading in which it operates on a time scale proper, relating the focus to earlier alternatives (‘as late as’); see esp. (D.209).
- That we are not dealing with a reading of ‘as early as’ becomes clearest in examples like (D.213, D.214), where developments in time are at stake and the ALREADY expression *kvar* in the meaning of ‘as early as’ is felicitous, but *sod* is not.

³⁴<https://talifinkelshtein.co.il/about/> (02 March, 2023).

(D.220) Context: Talking about political view.

? *Paul hu fod matun, lefumat Mark, še-hu qitsoni.*

P. 3SG.M still moderate.M but M. REL-3SG.M radical.M

‘Paul is still moderate, but Mark is radical.’ (Yael Greenberg, p.c.)

D.4.2.7 Additive and related functions

D.4.2.7.1 Additive

- **Glinert1976** (Glinert1976; Glinert1989), **Greenberg2012**, **Thomas2018** and **Tobin1985**.
- When addition involves more of the same type, *fod* is NP-internal (D.222, D.223), and can even stand in for a quantified indefinite NP ‘more’ (D.224). The syntactic rules governing the position (preposed or postposed) of *fod* as a phrasal adjunct are complex; see **Glinert1976**. Relatedly, *fod* in post-predicative position can mark that an event develops further ‘Verb some more’ (D.225).
- Postponed *fod* can also mark an additional, particularly strong argument, typically with concessive overtones (D.226).

D.4 Hebrew (Modern) (heb, hebr1245)

- (D.221) Context: I recently arrived in Israel. I report a conversation I had with a local.

Ve-hu fod amar še-ani medaber ſivrit ṭov

D.4.2.7.2 # Further-to

D Eurasia

- *sod* does not have “further-to” readings (Yael Greenberg, p.c.)

D.4.2.7.3 Comparisons of inequality

- Glinert1976 (Glinert1976, Glinert1989) and MiashkurGreenberg.
- Note that comparisons of inequality in Modern Hebrew are formed via *yoter* ‘more’ / *pahot* ‘less’. The standard of comparison, if present, is introduced by *mi* or *me’asher* ‘from’ (Glinert1989). *sod* contributes scalar additive ‘even’ to the comparison.
- Syntax: precedes and forms a constituent with *yoter*; note their moving through the clause together in (D.228).

(D.227) *Bil sod yoter gavoah mi-Jon.*
Bill still more tall from-John
'Bill is even taller than John.' (MiashkurGreenberg)

'It appals me still more.' (Glinert1989, glosses added)

D.4.2.7.4 Conjunctional adverb

- Glinert1989.
- Syntax: clause-initially.
- In this function, *sod* can occur alone, as in (D.231), a use that Glinert1989 describes as belonging to a formal register. It also occurs in the collocation *ma od* ‘what still’, i.e. what is more’ (Appendix D.4.2.7.5).

(D.231) *sod moser katav-enu ki...*
still report.3SG.M reporter-POSS.1PL COMP
'Our reporter further reports that...' (Glinert1989, glosses added)

D.5 Hills Karbi (mjw, karb1241)

D.4.2.7.5 Conjunctional adverbial: *ma od* ‘what is more’

- Glinert1989.
- Form: in the collocation *ma od* ‘what is more’, lit. ‘what still’.
- This collocation is clearly based on *fod* in general additive function (Appendix D.4.2.7.1), i.e. it is entirely parallel to English *what is more*.
- Syntax: clause-initially.

(D.232) *Hay-ta te’una, ma fod še-ha-nehag-im*
 COP.PST-3SG.F accident(F) what still SUBORD-ART.DEF-driver-PL.M
šavt-u.
 strike.PST-3PL
 ‘There was an accident, and what’s more, the drivers were striking.’
 (Glinert1989, glosses added)

D.4.2.8 Broadly modal and interactional uses

D.4.2.8.1 Exclamation *ve-fod ex!* ‘And how!'

- Glinert1976 (Glinert1976, Glinert1989).
- Form: in the fixed exclamation *Ve-fod ex!* ‘and-still how ‘and how’.
- This is most likely based on additive *fod* (Appendix D.4.2.7.1) and is strikingly similar to Serbian-Croatian-Bosnian *još kako, još koliko*, both ‘and how’, lit. ‘still how, still how much’ (Appendix D.11.1.8.1).

D.5 Hills Karbi (mjw, karb1241)

Introductory remarks Apart from descriptive materials, I searched KonnerthTisso2018’s (KonnerthTisso2018) text collection. My understanding of Hills Karbi has furthermore profited from discussions with Linda Konnerth.

D.5.1 -lāng

D.5.1.1 General information

- Form: mid-toned *-lāng* when following irrealis *-ji*.
- Wordhood: bound morpheme (verb suffix).

D.5.1.2 As a ‘still’ expression

- Gruessner1978, Konnerth2014 and Taro2010.

D Eurasia

- Specialization: attestations like (D.233–D.235) give evidence that this marker conforms to my definition. For instance, in (D.233) *-làng* evokes an alternative scenario in which the father’s children are no longer small, and he could therefore leave them home alone.
- Pragmaticity: the data allow for no conclusions.
- Polarity sensitivity: inner negation yields NOT YET.

(D.233) Context: The mother of two children has died. The father is worried that he cannot go work in the field and leave them home alone.

E ne-oso-màr=tā bī-hek~hāk-làng.
 DM 1.EXCL-child-PL=also be_small-small~PL-still
 ‘O, my children are still so small.’ (KonnerthTisso2018)

 should
 ‘Wenn ich nicht gekommen wäre, würdest du noch weiter schlafen. [If I hadn’t come here, you’d still be asleep]’ (Gruessner1978, glosses added)

D.5.1.3 Broadly adverbial temporal-aspectual functions

D.5.1.3.1 # Prospective ‘eventually’

- *-làng* does not have the prospective ‘eventually’ use (Linna Konnerth, p.c.)

D.5.1.4 Additive and related functions

D.5.1.4.1 Additive

- Konnerth2014
- This function is attested with *-làng* alone, as in (D.236), as well as in combination with additive *=tā*, where it gives emphasis to the notion of inclusion (D.237). Note how the additive function in (D.237) also becomes clear from the fact that despite negation *-làng* is not interpreted as NOT YET. Also note the

D.5 Hills Karbi (mjw, karb1241)

two occurrences of *-làng* in this example, in line with a common pattern in the usage of *=tā* (see Konnerth2014 on the latter).

- To express addition of an entity of the same type ('another'), *-làng* is used in combination with a numeral (D.238) and –optionally– *nón* 'now' (D.239) and/or iterative *-thū* (D.240).

(D.236) Context: a father whose wife has died is desperate.

 REFL/RECP-ask-go-still
 'We still need to ask our mother and father.'
 (KonnerthTisso2018)

D.6 Japhug (jya, japh1234)

Introductory remarks I am indebted to Guillaumes Jacques for discussing Japhug data with me and for eliciting additional data.

D.6.1 *pxjk^hu*

D.6.1.0.1 General information

- Wordhood: independent grammatical word.
- Syntax: relatively fixed (pre-verbal position, may be preceded or followed by arguments).

D.6.1.0.2 As a still expression

- Jacques2016 (Jacques2016, Jacques2021).
- Specialization: the discussion by Jacques2016 (Jacques2016, Jacques2021), together with examples like (D.245, D.246) give evidence that this marker conforms to my definition. For instance, in (D.245) *pxjk^hu* not only signals the continuation of a prior state, but also alludes to its future discontinuation. Further, albeit indirect, evidence comes from its use as NOT YET without negation (Appendix D.6.1.1.1).
- Pragmaticity: ex. (D.246) suggests that *pxjk^hu* is not only compatible with the neutral scenario, but also the unexpectedly late one.
- Polarity sensitivity: inner negation yields NOT YET.

- (D.245) *C^ha-a ci my-c^ha-a my-xsi, pxjk^hu xtcī-a cti.*

⁴⁰The Japhug “tropative” is a transitivizing device, with a meaning along the lines of ‘find/consider to be ...’, see Jacques2021.

D Eurasia

D.7 Ket (ket, ket1243)

Introductory remarks I am indebted to Andrey Nefedov, Stefan Georg, and Heinrich Werner for discussing Ket data with me and for helping with glosses.

D.7.1 hāj

D.7.1.1 General information

- Form: often reduced to *āj* or *hī*; there is also a variant *hās(ja)*.
- Wordhood: independent grammatical word.
- Syntax: judging from the available data, *hāj* generally precedes its focus, which in the phasal polarity function is the main predicate.

D.7.1.2 As a ‘still’ expression

- **Donner1955, Georg2007, KotorovaNefedov2015, Vajda2004, and Werner1997 (Werner1997, Werner2002);** additional discussion throughout **vanBaar1997**.
- Specialization: **vanBaar1997** identifies this marker as one that is in line with my definition.
- Pragmaticity: compatible with both scenarios (**vanBaar1997**).
- Polarity sensitivity: inner negation yields NOT YET.

(D.255) *Ít-iŋ hī ad-a-den-qaka áàŋ ūl*

‘Erula was smart and didn’t eat much of the meat. But Tuta was stupid.
He was greedy and would always eat it all up.’
(Vajda2004)

D.7.1.5 Broadly modal and interactional uses

D.7.1.5.1 Discourse marker in questions

- Belimov1976 and Werner1997.

D Eurasia

- This function is restricted to WH-questions. **Belimov1976** describes this (and other markers) as supplying an emotive character to interrogatives. Similarly, **Werner1997** translates it into German as *denn*, a marker commonly described as highlighting a follow-up question (e.g. **Wegener2001**). This is in line with the one contextualized example in the data (D.272) being a follow-up question after an unsatisfactory initial response.
- In all examples precede the predicate as with, among other things, the iterative use (Appendix D.7.1.3.1). An extension of the latter function to the speech act level would be in line with what has been described for French *encore* (Appendix D.2.1.10).

- (D.272) A: *Bil'ansän' di·mbes'in? Di l'gat u škɔladiŋal' di·mbes'in?*
 ‘Wer ist gekommen? Ob es Kinder sind, die aus der Schule gekommen sind? [Who has come? Will it be children, coming from school?]’
- B: *Bəŋ.*
 ‘Nein [No].’
- A: *Anet haj d-i-m-bes?*
 who still SUBJ.3-here-PST-move
 ‘Wer ist denn gekommen? [Who is it then, who just came?]’
- A: *Ka't hi·y di·mbes'.*
 ‘Ein alter Mann ist gekommen [An old man came]’
 (**Werner1997**, glosses added)
- (D.273) *Ba:m dativij: “Ba:t haj birɔ?”*
 old_woman she_asked old_man still where
 ‘старуха спрашивает: а где же старый?’ [The old woman asked: “But where's the old man?”]’ (**Belimov1976**; **Werner1997**, glosses added)

D.8 Lezgian (lezg1247, lez)

Introductory remarks Lezgian has two (sets of) STILL expressions: the first group is constituted by *ama* ‘still:LOC.COP’ and the verb suffix *-C(a)ma*, which goes back to periphrastic constructions involving *ama*. In the data consulted, there are no indications of additional functions for *ama* and *-C(a)ma*. Both forms ultimately go back to *mad*, which forms part of the expression of NO LONGER, and has a range of additional functions, including iterative and additive ones. In the data consulted, *mad* is not attested as an affirmative phasal polarity expression. Lastly, there is *hele(-lig)*. The latter is primarily an ALREADY expression in the present-day language, and only serves as an exponent of STILL in combination with *-Cma*.

D.8 *Lezgian (lezg1247, lez)*D.8.1 *hele(lig)*

D.8.1.1 General information

- Form: transcribed as тъеле in Cyrillic. There is a free variant with the Turkic suffix *-lig*.
- Wordhood: free morpheme.
- Etymology: ultimately from Arabic *hāl*, in all likelihood mediated via Turkic.
- Further note: as discussed below, this item only marginally serves to mark STILL in the present-day language; it is primarily an ALREADY expression (the latter function, however, seems not to be attested for the long form *hele(lig)*). As discussed by *vanderAuwera1993* (*vanderAuwera1993*, *vanderAuwera1998*) it is safe to assume that the concept of STILL was once the primary denotatum of *hele(lig)*; see Section 2.3.2 for a general discussion of the diachronic chain between STILL, NOT YET > ALREADY.

D.8.1.2 As a ‘still’ expression

- *Haspelmath1991* (*Haspelmath1991*, *Haspelmath1993*) and *TalibovGadziev1966*; further discussion in *vanderAuwera1993* (*vanderAuwera1993*, *vanderAuwera1998*) and *vanBaar1997*.
- Specialization: that this marker once functioned as an expression of STILL is only indirectly retrievable, namely from its extension into ALREADY via (NOT YET >) interrogative ‘yet’ (Appendix D.8.1.3.1), and by comparison with cognates across neighbouring languages.
- Pragmaticity: *Haspelmath1991* (*Haspelmath1991*, *Haspelmath1993*) describes *hele(lig)* as giving emphasis to *-Cma*; this might indicate that this combination serves to indicate the unexpectedly late scenario.
- Polarity sensitivity: inner negation yields NOT YET; the vast majority of examples involve bare *hele*, without *-lig*.
- Further note: as noted above, this expression does not (anymore) serve as STILL in its own right.

D.8.1.3 Uses related to other phasal polarity concepts

D.8.1.3.1 Interrogative ‘yet’ (and ALREADY)

- *Haspelmath1991*; further discussion in *vanderAuwera1993* (*vanderAuwera1993*, *vanderAuwera1998*) and *vanBaar1997*.
- Form: in this function, the suffix *-lig* appears to not occur.
- This function is found with indirect (D.274) and direct (D.275) questions.

D Eurasia

- Ex. (D.276) illustrates *hele* as an ALREADY expression.

(D.274) *Zun JusufDerbentd-aj hele q^hfe-nwa-j-da-l*
 1SG.ABS J. Derbentl-out_of still leave-ANT-PTCP-NMLZ-ON
šaklu že-zwa.
 doubting COP-IPFV
 'I doubt whether Jusuf has left Derbent yet.' (Haspelmath1991)

(D.275) *JusufDerbentd-aj hele q^hfe-na-ni?*
 J. Derbent-out_of still leave-AOR-Q
 'Has Jusuf left Derbent yet?' (Haspelmath1991)

(D.276) *JusufDerbentd-aj hele q^hfe-na.*

 'Jusuf has already left Derbent.' (Haspelmath1993)

D.8.1.4 Temporal connectives and frame setters

D.8.1.4.1 Persistent time frame

- Haspelmath1991.
- There is only one clear example in the data.

(D.277) *Hele zun akwa-daldi, am q^hfe-na.*
 still 1SG.ABS see-CVB:before 3SG.ABS leave-AOR
 'Even before she saw me, she left. / Noch ehe sie mich sah, ging sie weg.'
 (Haspelmath1991)

D.8.1.4.2 Time-scalar ('as early/late as')

- Haspelmath1991 (Haspelmath1991, Haspelmath1993).
- *Hele* functions as a time-scalar additive marker that operates on a scale of time proper and is compatible both with earlier alternatives 'as late as' (D.278) and later ones (D.279-D.281). That is, it is understood as underspecified for a relative rank on the time scale.
- In all likelihood, the availability of the 'as early as' use is at least partially due to the fact that this item has developed from a STILL expression into an ALREADY expression. At the same time, scalar inferences from the persistent time frame use (Appendix D.8.1.4.1) might also have played a role; thus compare (D.277) above to (D.281).
- Syntax: Haspelmath1991 points out that *hele* in this use behaves like a typical Lezgian focus particle, occurring together with the focus in (D.280), where it stands in opposition to *anžax/tek* 'only'.

D.9 Mandarin Chinese (cmn, mand1245)

- (D.278) *Hele c'erid lahaj asir.d-a fkir-zawa-j* *xi, ...*

 master satirist as show-AOR-PST
 'Even before the October Revolution (happened) Sulejman St'al had
 shown himself as a master satirist. / Schon bevor die Oktoberrevolution
 geschah, hatte Sulejman St'al sich als Meistersatiriker gezeigt.'
 (Haspelmath1991)

D.9 Mandarin Chinese (cmn, mand1245)

Introductory remarks I am indebted to Zhuang Chen for long discussion of Mandarin data with me, and for providing additional examples. Further thanks go to Dan Ke for helping standardize tone annotations. Note that several functions of *hái* involve the combination with copula *shì*. This type of “compounds” involving *shì* (originally introducing an embedded predicate) occurs with several adverbials in Mandarin; see Wiedenhof2015.-

D.9.1 *hái*

D.9.1.1 General information

- Form: 还 in Chinese characters.
- Wordhood: independent grammatical word.
- Syntax: fixed position, immediately preceding the predicate.
- Etymology: < *huan* ‘go/come back’.

D Eurasia

D.9.1.2 As a ‘still’ expression

- **Alleton1972, Chu1998, Donazzan2008, JingSchmidtGries2009, LiThompson1981, Liu2000, Lu2019, Paris1988, Yang2017, Yeh1998, and ZhangLing2016**, among many others.
- Form: may combine with copula *shì*, yielding *háishi*, as in (D.284).
- Specialization: the numerous descriptions, when taken together, clearly show that this marker conforms to my definition; **Donazzan2008** and **Yeh1998** explicitly discuss the incompatibility of *hái* with inalterable states.
- Pragmaticity: compatible with both scenarios. According to **Paris1988**, the unexpectedly late scenario is marked by sentence-final particle *ne*. **Chu1998** and **Liu2000**, on the other hand, state that it is made salient by stress on *hái*.
- Polarity sensitivity: inner negation yields NOT YET.

(D.282) *Qùnián fēijī chūshì zài qǐfēi de bàn ge zhōngtóu*
 last_year airplane have_accident at take_off ASSOC half CLF hour
yǐnèi hái yǒu diànhuà, yǐhòu jiù méi liánluò le.
 within still EXIST telephone after then NEG contact SFP
 ‘In last year’s plane accident, for half a hour after takeoff there was still telephone contact, then (the changed situation was that) there was no more contact.’ (**LiThompson1981**)

(D.283) *Nǐ dōu èrshí háo jǐ de rén le, zěnme hái zài chī fùmǔ?*
 2SG all twenty several ASSOC person PFV how still PROG eat parents
 ‘You are over twenty now. How can you still live off your parents?’
 (**Li2016**)

(D.284) *Nǐ hái-shi zhēn de tài xiǎo le.*
 2SG still-COP real ASSOC too young SFP
 ‘You are really much too young still.’
 (**Wiedenhof2015**, glosses added)

D.9.1.3 Uses on the fringes of ‘still’

D.9.1.3.1 Scalar contexts

- **Alleton1972, Lai1999, Wiedenhof2015**.
- *Hái* is compatible with contexts of decreases over time (D.285, D.286). On the other hand, *hái* appears to be odd in contexts of increase functions, where another item, *cái* is used instead (D.287, D.288). The latter is a restrictive ‘only’ marker which, though not inherently scalar in all of its uses (see **Hole2004** for discussion), is strongly associated with scalar contexts (e.g. **Lai1999**).

D.9 Mandarin Chinese (cmn, mand1245)

- (D.285) *Nǐ hái shèng duōshǎo qián?*
2SG still remain how_much money
'How much money is left with you?' (Shi2016)
- (D.286) *Xiànzài hái yǒu duōshao rén, hái yǒu liǎng sān wàn zài lǐmian?*
now still EXIST how_much person still EXIST pair three 10,000 in inside
'How many people are there still, some twenty or thirty thousand are still in prison?' (Wiedenhof2015)
- (D.287) Context: we are supposed to be sent a total of 5 books each.
A: I've received four.
B: I've received four, too.
C: *Wǒ cài shōu-dào sān běn.*
1SG only receive-arrive three CLF
'I've only received three so far.' (Zhuang Chen, p.c.)
- (D.288) *Zhè gè sài-jì, wǒmén duì cài wán le yì chǎng bǐsài.*
PROX CLF match-season 1PL team only play PFV one CLF match
'So far, our team has only played one game this season.'
(Zhuang Chen, p.c.)

D.9.1.4 Uses related to other phasal polarity concepts

D.9.1.4.1 # Interrogative 'yet'

- *Hái* does not have uses as interrogative yet, neither in direct, nor in indirect questions (Zhuang Chen, p.c.).

D.9.1.5 Broadly adverbial temporal-aspectual functions

D.9.1.5.1 Iterative

- Alleton1972, Donazzan2008, JingSchmidtGries2009, Liu2000, Paris1988, Yeh1998 and Zhang2017.
- This function is restricted to future time reference. As a correlate, it often cooccurs with modals such as *yao* 'want' or *hui* 'will', as in (D.289, D.290).

- (D.289) *Míngtiān hái huì xiàyǔ ma?*
Tomorrow still will rain Q
'Will it rain again tomorrow?' (HuangShi2016)

D Eurasia

- (D.290) *Lǎowáng zuótān qù yóuyǒng, jīntiān hái yào qù.*
Laowang yesterday go swim today still want go
'Laowang went swimming yesterday, and he will go again today.'
(Liu2000)

- (D.291) *Míngtiān hái chī miàotiáo, wǒ kě shòubùliǎo le.*
tomorrow still eat noodles 1SG but stand SFP
'If (we) eat noodles again tomorrow, I won't stand it.'
(Ma2000, cited in JingSchmidtGries2009)

D.9.1.6 Marginality

- Alleton1972, BiqHuang2016, Donazzan2008, JingSchmidtGries2009, LiThompson1981, Lu2019, Yang2017, Yeh1998, Zhang2017 and ZhangLing2016.
- This includes derogatory comparisons like (D.295).
- Readings of marginality are often accompanied by *suan* 'consider', i.e. 'can still be considered to be', as in (D.294).
- Several authors point out that marginal readings of *hái* are incompatible with situations that are usually evaluated negatively: *hai gan-jing* 'still clean', but *#hai zang* 'still dirty' (Yeh1998; Lu2019, and references therein).
- According to Yeh1998, the marginality use shows up eight centuries later than *hái* as STILL.
- As pointed out by Paris1988, marginality readings also appear to be responsible for *hái* in "make-do" contexts such as (D.296). Similarly, the marginality use is likely to motivate the optional employment of *hái* in the collocation *yǔqì ... bù rú* 'rather than A ... would (still) be better B', which signals that B is the less bad of the two options, as in (D.297).

- (D.292) A: *Nǐ huì bù huì pà lái bù jí?*
'Are you afraid that we won't be there on time?'
B: *Huì a.*
'Yeah, I am.'
...
A: *Huh. Méi guānxī la. Wǒ júede dào nà biān, yīnggāi hái hǎo*

basketball

‘It is [still] better to play basketball than to wander aimlessly on the street.’ (HuangShi2016)

D.9.1.7 Additive and related functions

D.9.1.7.1 Additive

- Alleton1972, BiqHuang2016, Chen2018, Chu1998, Donazzan2008, HuangShi2016, LiThompson1981, Liu2000, Lu2019, Paris1988, RossShengMa2014, Yeh1998 and ZhangLing2016, among others.
- The focus is the predicate, excluding the subject. That is, additive *hái* cannot be used in contexts of the type ‘A Verb-ed and B, too, Verb-ed’.
- ZhangLing2016 point out that *hái* as an additive marker is associated with an incremental build-up of discourse, similar to German *noch* (Appendix D.3.1.7.1). Relatedly, JingSchmidtGries2009, based on Ma2000, point out that additive *hái* requires the relevant situations to fall within the same time span: additive

D Eurasia

hái is infelicitous in contexts like ‘last year s/he did this and this year s/he additionally did that’, unless there is a single overarching time span (e.g. ‘in recent years years s/he has been busy...’).

- A scalar additive reading (‘even’) only arises with longer enumerations, i.e. it is a contextual inference (D.301)
- In additive function, *hái* often co-occurs with existential *yǒu*, yielding *hái yǒu* (D.300). This is, in fact a common collocation; according to Lu2019 it accounts for more than twenty percent of all tokens of *hái* in the Academia Sinica Balanced Corpus of Modern Mandarin.
- According to Yeh1998, this function developed shortly after the iterative one (Appendix D.9.1.5.1) and about a century before *hái* as a phasal polarity expression.

(D.298) *Tā chūle jiāshū, hái zuò yánjiū.*

3SG apart_from teach still do research

go London Bali still EXIST Rome

‘We are going to London, Bali, and Rome as well.’ (Wiedenhof2015, glosses added)

(D.301) *Zhāngsān dǎsǎo le fāngzi, zuò le dàngāo hái yùn le zhuōbù.*

Z. sweep PFV house do PFV cake still iron PFV tablecloth

‘Zhangsan a balayé la pièce, a fait un gâteau et aussi/même repassé la nappe. [Zhangsan swept the room, baked a cake and also/even ironed the tablecloth]’ (Donazzan2008)

D.9.1.7.2 Comparisons of inequality

- Alleton1972, Chen2018, Donazzan2008, JingSchmidtGries2009, Liu2000, Lu2019, Paris1988, ParisShi2016, Wiedenhof2015, Yang2017, Yeh1998, Zhang2017, and ZhangLing2016.
- Form: in this function *hái* does not combine with copula *shì* (see below on a different collocation, *hái yào*). While examples of *háishì* in comparatives are

D.9 Mandarin Chinese (cmn, mand1245)

found (e.g. **BiqHuang2016**; **Wiedenhof2015**), in these cases *háishì* does not contribute to the comparative construction, but provides a counter-expectational and/or concessive reading (Zhuang Chen, p.c.).

- *Hái* in comparisons of inequality occurs in two contexts:
 - In comparisons of inequality with an overt standard (D.302–D.303). Note that Mandarin Chinese makes use an exceed-comparative (**Stassen2013**) featuring the comparative marker *bǐ*. *Hái* surfaces in the clause featuring the predicate that is compared, that is, following the standard of comparison and ads the notion of ‘even’.
 - In the absence of an overtly expressed standard of comparison introduced by *bǐ*, *hái* combines with *yào* ‘will’ to give a reading of ‘even more’ (D.304).
 - There are several examples of *hái* of the type in (D.305) that are discussed under the heading of comparisons, but which are best interpreted as involving a combination of the marginality reading of *hái* (D.9.1.6) in combination with an implied comparison. This interpretation is supported by the fact that these cases are compatible with expressions for a low degrees such as *yídiǎn* ‘a little’ but not with *hěn duō* / *dé duō* ‘very much’ (see **Liu2000**).

- (D.302) *Yīngbàng bǐ méijīn hái dà ma.*
 pound than dollar still big SFP
 Pounds have an even higher value than dollars.’ (**Lu2019**)

 check_in before should pay deposit still EXIST NEG able carry pet
 ‘You need to pay the deposit before using the room. Also, you’re not allowed to have pets here.’ (found online, glosses added)⁴²

D.9.1.7.4 Disjunctive constituent coordination

- Donazzan2008, HuangShi2016, Lu2019, Wiedenhof2015 and ZhanBai2016.
- Form: normally occurs combination with copula *shì*, hence *háishi*. Only in very informal speech does *hái* alone serve this function (Wiedenhof2015); see (D.311).
- This function typically occurs in interrogatives (including indirect questions). However, it is also attested within alternative concessive conditionals (D.310).
- Lu2019 proposes that this function goes back to a pattern $[(shi) p\ hái] [shi q]$, with additive *hái* linking two propositions, copula *shì* serving as a subordinator (‘it is the case that *q*’) and the disjunctive reading (‘or’) arising as a contextual inference. This pattern then underwent structural reanalysis to $[p\ háishi\ q]$. Building on Lu2019’s proposal, it can be assumed that the structural reanalysis was accompanied by a conventionalization of the disjunctive function.

(D.308) Context: from an interview on a radio show. A listener has called in and asked the artists whether further productions from her are to be expected.
Nǐ shì zhǐ wútáijù, hái-shì zhǐ chàngpiān?

 'Même si'il en parlait avec moi, jes ne le croirais quand même pas

D Eurasia

beaucomp [Even if he talked to me about it, I still wouldn't believe him much].’ (Paris1988)

D.9.1.8.2 Counter-expectation

- Alleton1972, BiqHuang2016, Liu2000 and Yeh1998.
- In this function *hái* “indicate[s] the speaker’s incredulousness ... there is a gap between the situation described in the clause and the assumption or expectation held by him or other people.” (BiqHuang2016). Its meaning thus strongly points towards *hái* in concessive apodoses (Appendix D.9.1.8.1) as the source of this use.
- All examples in the data consulted feature “bare” *hái* without *shì*. Alleton1972 describes this use as usually being presented with the intonation of a (rhetorical) question and that it can be paraphrased faithfully by using *nándào* ‘by any chance, isn’t it possible that?’.
- Many examples feature additional evaluative material: *zhēn* ‘really’ in (D.315, D.316,D.317), *chū wǒ yǐliào* ‘beyond my expectation’ in (D.316). Similarly, sentence-final *a* in (D.317) has been described as often conveying a notion of surprise (HuangShi2016)

- (D.315) *Zhēn* *ké* *yóu* *qián*, *hái* *bù* *zǎo* *jiāo* *le?*
 really indeed EXIST money still NEG early hand_over PFV
 ‘Si vraiment nous avions de l’argent, comment n’aurions- nous pas payé
 plus tot? [If we really had the money, don’t you think we’d had paid
 earlier?]’ (Alleton1972, glosses added)

- (D.316) *Wǒ* *lǎogōng* *de* *hóngshāo* *yú* *hái* *zhēn* *chū* *wǒ*
 1SG husband ASSOC braise_in_soy_sauce fish still really beyond 1SG
yǐliào *zhīwài* *de* *hǎo*.
 expectation out_of ASSOC good
 ‘To my surprise, the braised fish cooked by my husband was
 exceptionally good!’ (BiqHuang2016)

- (D.317) Context: A is speaking about his diet when living in the Netherlands.

- A: ... *xiànzài* *wǒ* *feicháng* *xǐhuān* *chī* *qìsi*.
 ‘... now I am extremly fond of cheese.’
- B: *Nà* *nǐ* *hái* *xíguàn* *de* *zhēn* *kuài* *a!*
 that 2SG still habit ASSOC really real SFP:surprise
 ‘Well, in that case, you did get used to it really fast!’
 (Wiedenhof2015)⁴³

⁴³Initial *na* contributes a notion along the lines if ‘in that case, if that is so ...’ (Wiedenhof2015)

D.10 Northern Qiang (cng, nort2722)

D.10 Northern Qiang (cng, nort2722)

Introductory remarks In addition to the autochthonous Northern Qiang STILL expression *tce-*, the texts in LaPollaHuang2003 feature several tokens of *χaisə* ‘still is’ < Mandarin Chinese *háishì*. Judging from a remark in LaPollaHuang2003, this item primarily serves as a filler. I have thus not included it in my sample.

D.10.1 *tce-*

D.10.1.1 General information

- Form: the vowel segment is subject to regressive vowel harmony.
- Wordhood: bound morpheme (a prefix that normally occurs on the verb, although in certain contexts it can attach to adjectives).

D.10.1.2 As a ‘still’ expression

- LaPollaHuang2003 and Huang2005.
- Specialization: examples like (D.318–D.320) give a fairly good indication that this marker conforms to my definition.
- Pragmaticity: appears to be compatible with both scenarios (tentative conclusion). (D.318, D.319) are prime candidates the unexpectedly late scenario.
- Polarity sensitivity: inner negation yields NOT YET. With negated nominalization, this serve to construe temporal clauses of precedence (LaPollaHuang2003).

Dz ɳɳɳɳɳ

(D.318) Context: an orang utan wants to eat an orphaned boy.

 'S/he who likes to sleep late is still sleeping.'
 (LaPollaHuang2003)

D.10.1.3 Broadly adverbial temporal-aspectual functions**D.10.1.3.1 Iterative via increment**

- LaPollaHuang2003.
- There appear to be two different expressions, *a-s* and *a-thən*, both glossed as 'one-time' by LaPollaHuang2003, that yield this function in combination with *tce-*.

- (D.321) Context: trying on shoes.
Tse-si xsusu-pazguə-χau-ja-pan, ?ū a-s i-tci-tsi-n.
 this-pair thirty-COM-nine-size-COM-half 2SG one-time DIR-still-see-2SG

 INTENS-DEF:one-time-LNK DIR-drink stone_slab DIR-turn_over-LNK
 'They could still only lift it [stone slab] a little. The two drank mouthful of water again and they turned over the stone slab.'
 (LaPollaHuang2003)

D.10.1.3.2 First(?)

- LaPollaHuang2003.
- In this function, *tce-* occurs with the copula *ŋuə* and a nominalized verb, which is a collocation denoting obligation (see LaPollaHuang2003).

D.10 Northern Qiang (cng, nort2722)

- LaPollaHuang2003 state that without the STILL expression, “the form would express an action that had been agreed upon or set beforehand”. Based on the available examples, it is hard to interpret the function of this construction. Possibly, it indicates what remains to be done prior to some other action, thus straddling the boundary between precedence (Section 2.4.5.1) and a “further-to” use (Section 3.3.3). Both are attested in the wider vicinity (Appendices D.6.1.2.1, D.5.1.4.2).
- Example (D.325) shows that this reading is also available under negation.

(D.323) *Qa kə-s tca-ŋuə.*
 1SG go-NMLZ still-COP
 ‘I (still) must go.’ (LaPollaHuang2003)

(D.324) *The: ləyz zdə-s tca-ŋuə.*

 3SG book read/study-NMLZ NEG-still-COP
 ‘I (still) don’t need to study.’ (LaPollaHuang2003)

D.10.1.4 Marginality

- LaPollaHuang2003.
- Judging from the few available examples, this gives a reading along the lines of ‘relatively’, as is also often found with Mandarin Chinese *hái* (D.9.1.6).
- Note that marginality survives under negation, as in (D.328).

(D.326) *Tca-wa.*
 still-big
 ‘Relatively big.’ (LaPollaHuang2003)

(D.327) *Tca-basta.*
 still-slow/late
 ‘Relatively slow/late.’ (LaPollaHuang2003)

(D.328) *Ma-tca-χtsa.*
 NEG-still-small
 ‘Not so small.’ (LaPollaHuang2003)

D.10.1.5 Additive and related functions

D.10.1.5.1 Additive

D Eurasia

- Huang2005 and LaPollaHuang2003.
- This use encompasses a ‘do some more’ reading in the prospective aspect inflection (D.333).

(D.329) *bzə-pies a-fə^r ha-tci-ŋuə*

'Don't go now (lit. Wait a while longer).' (LaPollaHuang2003)

(D.333) *Qa tca-na:*
1SG still-sleep.PROSP
'I'm still going to sleep (I want to sleep some more).'
(LaPollaHuang2003)

D.10.1.5.2 Comparisons of inequality

- LaPollaHuang2003.
- Comparisons of inequality in Northern Qiang follow a pattern [NP_{comparatee} NP_{standard}-s PRED]. Addition of *tce-* yields a great difference in degree ‘much more’. It seems that an ‘even more’ reading is a contextual inference in contexts like (D.335), where the standard is explicitly described as having the property in question.
- As with Mandarin Chinese *hái* (Appendix D.9.1.7.2), there is also a reading of a relative degree of comparisons, which likely involves the marginality use (Appendix D.10.1.4) plus comparison, i.e. ‘compared to ... still counts as’.

(D.334) *Qa the:-s tce-fia.*
1SG 3SG-than still-white:1SG
'I am lighter (in color) than him (a lot lighter).'
(LaPollaHuang2003)

- (D.335) *Pəs məpa wa, təp-ni təs-s tca-məpa: lu.*
 today cold very tomorrow-ADV this-than still-cold.PROSP will
 'Today is very cold; tomorrow is going to be even colder than this.'
 (LaPollaHuang2003)

D.10.1.6 Broadly modal and interactional uses

D.10.1.6.1 Almost

- LaPollaHuang2003.
- This function obtains in a combination of two clauses, the first of which contains a construction *a-zə tca-ŋua-sə* 'one-CLF still-COP-LNK.CF'.
- This use signal that an event or state nearly came about. As pointed out by LaPollaHuang2003, in this construction the clause linker *-sə* contributes a counterfactual meaning, whereas *tce-* in all likelihood serves as an additive ('had it been a little more'). That is, we find the same function as in (D.331, D.332) above.
- Only one example is found in LaPollaHuang2003's (LaPollaHuang2003) grammar.

- (D.336) *a-zə tca-ŋua:-sə, qa i-pə-l ma-lə-jya.*
 one-CLF still-COP.PROSP-LNK 1SG DIR-arrive-come NEG-able-ASP:1SG
 'I almost couldn't return.' (LaPollaHuang2003)

D.11 Serbian-Croatian-Bosnian (hbs, sout 1528)

Introductory remarks I am indebted to Jurica Polančec, Marijana Kresic Vukosav, and Stefan Savić for discussing Serbian-Croatian-Bosnian data with me and for providing many additional examples.

D.11.1 *još*

D.11.1.1 General information

- Form: *još* in Cyrillic script.
- Wordhood: independent grammatical word, invariable.
- Etymology: < Proto-Slavic *ěsče 'still, yet' with the initial segment going back to *i 'and' (Derksen2008).

D Eurasia

D.11.1.2 As a ‘still’ expression

- Alexander2006, Buchholz1991, KontrastiveGrammatik, Hammond2005, Prajnkovic2018, Tekavcic1989 and HJP.
- Specialization: identified as a marker that is in line with my definition by vanderAuwera1998.
- Polarity sensitivity: inner negation yields NOT YET.
- Pragmaticity: augmented by *uvek/uvijek* ‘always’ for the unexpectedly late scenario.

(D.337) *Još si mlad-a.*
still COP.2SG young-NOM.SG.F

‘Du bist noch jung. [You are still young]’ (Buchholz1991, glosses added)

(D.338) *Ujutro još mogu raditi ali uveče*

nikako.

by_no_means

‘Am Morgen kann ich noch arbeiten, aber am Abend überhaupt nicht.
[In the morning I’m still capable of working work, but in early evening,
not at all]’ (KontrastiveGrammatik, glosses added)

D.11.1.3 Uses on the fringes of ‘still’

D.11.1.3.1 Scalar contexts

- Prajnkovic2018.
- *Još* itself is only used for decreases, whereas for limited increases (‘still only’) scalar restrictive *tek* is used (D.341). However, its emphatic (unexpectedly late) counterpart *još uv(ij)ek* can combine with a restrictive marker to signal ‘still only’ (D.343).
- Also note the complex focus particle *samo još* ‘only still’ for ‘only as little as ... left’ in (D.340).
- Syntax: can form a single constituent with the focus. As shown in (D.339) they move through the clause together and can appear before second position clitics.

(D.339) Context: I had ten books and I’ve given away some of them.
Osta-lo mi (ih) je još pet knjiga. /

'... so that you won't end up ill.' (Stefan Savić, p.c.)

D.11.1.5 Temporal connectives and frame setters

D.11.1.5.1 Persistent time frame

- **Buchholz1991.**

- In this function, *još* associates with a temporal frame adverbial (D.351–D.353) or a related expression (D.354), giving a reading of 'while (it is) still ...'.
- Syntax: forms a constituent with the expression it associates with; note how *još danas* in (D.353) precedes the second-position future auxiliary.

- (D.351) Context: a student with the ardent desire to become a doctor did not get accepted into medical school at the first try. He applied again, and good the good news that this time he was accepted for admission in Berlin got to him while he was travelling.

Još sledećeg dana je oputovao za Berlin

victim(F) COP.3SG die.PTCP-SG.F still at face.LOC.SG place.GEN.SG
'The victim died right at the scene of the accident.' (Stefan Savič, p.c.)

D.11.1.5.2 Time-scalar ('as late as/as far removed as')

- Buchholz1991, HJP and Prajnkovic2018.
- Time-scalar additive *još* is attested both with a scale of time proper 'as late as' (D.355, D.356) and with one of temporal distance 'as far removed as' (D.358–D.361). The common denominator lies in the fact that the alternatives are consistently lower values (earlier times/less removed times). The two functions overlap in future contexts like (D.357).
- The data suggest that readings of 'as far removed as, as early as' arise in the same contexts described by Mustajoki1988 for the Russian cognate *eščë*. These are, in broad strokes:
 - With specifications of a point in time (D.357).
 - With reference to steps in a process, stages in life, etc. (D.358, D.359).
 - With specifications 'even before' (D.360).
 - With designations for people and personal names, typically deceased or otherwise inaccessible (D.361).
- That the 'as far removed as' reading is not one of earliness ('as early as') becomes visible by a direct comparison with the ALREADY expression *več* in examples like (D.363) and, even more prominently, in (D.364), where a comparatively minor forward leap on the temporal axis is at stake and *još* is infelicitous.
- Syntax: forms a constituent with its associated expression.

- (D.355) *Još 1967, su se na Novom Zelandu pabovi*

 'You still got off cheaply.' (Prajkovic2018, glosses added)

D.11.1.6.1 Marginality, 'within limits': *još-još*

- HJP.
- Form: in the reduplicated form *jošjoš*, typically together with the neuter anaphoric demonstrative *to* as the subject.
- This use signals

... da se dopušta kao mogućnost, da se na što može pristati ili da je pod nekim okolnostima prihvatljivo (slijedi ili se podrazumijeva nešto drugačije ili suprotno) [...what is permissible, can be agreed to, or is acceptable in a given circumstance (following or implying something else or to the contrary)] (HJP)

- This use was not known to all native-speaker linguistics consulted by me, and might be a regionalism. The same use is, however, described for the cognate form *ešte-ešte* in Slovak (SSSJ; KSS4).

- (D.369) *Platiti tolike novce, to još~još (ali pay.PFV.INF so_much.GEN.SG.F money(F).ACC.SG DEM.N still~still but za lošu stvar nikada).*
 for bad.ACC.SG.F thing(F).ACC.SG never
 'To spend so much money, well ok (but [I'd] never [spend it] on [such] a bad thing).' (HJP, glosses added)

D.11.1.7 Additive and related functions

D.11.1.7.1 Additive

- Buchholz1991, KontrastiveGrammatik, Prajkovic2018, Tekavcic1989 and HJP.
- When an increment of the same type is added, *još* itself can "stand in" for an indefinite quantifier 'more' (D.373).
- Additive *još* may co-occur with other additive markers, such as *i* in (D.371).

D.11 Serbian-Croatian-Bosnian (hbs, sout 1528)

- In the pattern illustrated in (D.374), the additive use can yield intersubjective and concessive overtones.
- Syntax: can form a constituent with its focus.

(D.370) *Pored toga što piše pjesme, čime se još bavi?*
 besides write.IPFV.3SG poem.ACC.PL what REFL still

 ‘This novel is even more interesting for him than the previous one.’
 (Prajkovic2018, glosses added)

D.11.1.8 Broadly modal and interactional uses

D.11.1.8.1 Exclamation *još kako, još koliko* ‘And how’

- JDahl1988, Prajkovic2018, and HJP.
- Form: this function obtains in collocation with *kako* ‘how’ (D.378, D.379) and *kaliko* ‘how much’.
- This collocation is used in conversational dialogue. It has an affirmative, reinforcing and anaphoric function ‘and how (much)’ that is a straightforward extension of the additive use of *još* (Appendix D.11.1.7.1) in collaboration with the cumulative component of STILL; note the variant forms *i te kako, i te kaliko* ‘and also how (much)’.

(D.378) A: *Jesi li dobro naspava-o?*
 COP.2SG Q well sleep.PFV.PTCP-SG.M
 ‘Did you sleep well?’
 B: *Još kako.*
 still how
 ‘And how I did!’ (Prajkovic2018, glosses added)

 'I warned them.'
- B: *Još kaliko.*
 still how_much
 'Very much so.' (HJP, glosses added)

D.12 Southern Yukaghir (yux, sout2750)

Introductory remarks Apart from descriptive materials I searched YukaghirTexts's (YukaghirTexts) text collection and the Southern Yukaghir online documentation (NikolaevaMayer2004). I adapted examples from the latter to the practical orthography used in Maslova2003.

D.12.1 *ajī* / *āj*

D.12.1.1 General information

- Form: two variants, *ajī* and *āj*. Both forms can serve as phasal polarity expressions, but differ slightly in their additional functions.
- Wordhood: independent grammatical word.

D.12.1.2 As a 'still' expression

- *Maslova2003*.
- Form: both as *ajī* and *āj*.
- Specialization: textual attestations like (D.381–D.383) give evidence that this marker conforms to my definition. For instance, in (D.381) *ajī* not only indicates the persistence of a prior state in which there were few Russians and Yakut on Yukaghir land, but it also evokes a contrast with the time of speech, where the situation has changed.

D Eurasia

- Pragmaticity: compatible with both scenarios (tentative conclusion). Example (D.383) is a prime candidate for the unexpectedly late scenario. It is yet unclear, if additional marking, such as the intensifier in (D.383), is compulsory for indicating the unexpectedly late scenario.
- Polarity sensitivity: inner negation yields NOT YET.
- Syntax: preverbal position.

- (D.381) Context: The Yukaghirs and Even understood each other and would exchange goods.

Luči-pe jaqa-pe tij lebie-ge aji ča-pe-de parā-ge...
 Russian-PL Yakut-PL this earth-LOC still be_few-PL-POSS:ATTR time-LOC

D.12.1.3 Broadly adverbial temporal-aspectual functions

D.12.1.3.1 Iterative and restitutive

- *Maslova2003*.
- Form: in this function, the marker invariably occurs as *āj*.
- Both iterative (D.384, D.385) and restitutive uses (D.387, D.388) are attested.
- An example like (D.386) can be read as either iterative or additive.
- Syntax: preverbal position.

⁵⁴See Maslova2003 on the Southern Yukaghirs "transformative" *-ŋōt*.

D.12.1.4 Additive and related uses

D.12.1.4.1 Additive

- Maslova2003.
- Form and syntax: dependent on the focus of the expression.
 - The variant *āj* marks additive ‘too, also’ (D.389-D.391). It normally occurs in the preverbal position, but, under certain conditions, it may follow an NP that constitutes its focus, without preceding the verb. It may be used

D Eurasia

across two adjacent clauses in a pattern reminiscent of bisyndetic coordination (D.391); also see (D.386) above.

- The variant *ajī* occurs with transitive predicates, the P-argument being the focus and the alternative denotations belonging to the same type, i.e. ‘another, more’ (D.392, D.393). It is a phrasal adjunct to the constituent containing the focus.

(D.389) Context: people have gone gathering berries.

Met emd'e juk-ō-j, lebejdī-le āj šaqal'e-š-nu-m.

1SG sibling small-STAT-3 berries-ACC still gather-CAUS-IPFV-TR.3

(D.393) *Ajī lebejdī-k šaqal'e-šu-l.*
 still berries-PRED gather-CAUS-1PL
 ‘(Then) we gathered more berries.’ (Maslova2003)

D.12.1.4.2 Comparisons of inequality

- Maslova2003.
- Form: both *āj* and *ajī* occur in this function.
- Southern Yukaghirk uses a from-comparative (Stassen2013), in which the standard of comparison –if it is explicitly given– is marked with the ablative case, as in D.394. There is no overt marking of comparison on the predicate (Maslova2003). The use of *āj/ajī* adds the scalar additive notion of ‘even’.
- Syntax: appears to be a syntactic sister to the focus.

D.13 Spanish (spa, stan1288)

(D.394) *Tudel mit-ket ăj̄ omos' modo-j.*

3SG 1PL-ABL still well sit-INTR.3SG

‘He lives even better than we do.’ (Maslova2003)

(D.395) Context: the narrator and his companions have heard that the moon is full of candies and are eager to get there. After hearing another story about the nice things to had found there, their desire has increased further.

Mit ajī c'om-ō-keete er'dē-ili c'ugo-n, tamun kind'e-ge jaqa-ili monu-t.

say-SS.IPFV

‘We wanted even more to go quickly to the moon.’ (NikolaevaMayer2004)

(D.396) Context: in order to prepare Perch for a dangerous trip, other fish have provided him with an iron coat. That has proven not enough amour.

Aj̄i omos' adi ă-gi nado.

still well strongly make-poss.3 necessary

‘It is necessary to strengthen him even more!’ (Maslova2003)

D.13 Spanish (spa, stan1288)

Introductory remarks Apart from descriptive materials, I consulted the *Corpus del Español del Siglo XXI* (CORPES XXI) (<https://www.rae.es/banco-de-datos/corpes-xxi>). I am furthermore indebted to Kristian Roncero for discussing Spanish data with me.

D.13.1 aún

D.13.1.1 General information

- Form: usually written as *aun* when unstressed.
- Wordhood: independent grammatical word, invariable; some authors (e.g. Trujillo1990) treat the unstressed form as a proclitic.
- Etymology: from a Latin phrase ‘until today’.

D.13.1.2 As a ‘still’ expression

- vanderAuwera1998, Garrido1993, OlivaresSorpena2001, RAEGramatica (RAEGramatica, RAEDictionary) and Trujillo1990, among others.

D Eurasia

- Specialization: identified as a marker that is in line with my definition by *vanderAuwera1998*; the description by *RAEGramatica* directly addresses both meaning components.
- Polarity sensitivity: inner negation yields NOT YET.
- Pragmaticity: compatible with both scenarios.
- Further note: *aún* is attested as an elliptical one-word answer (D.399).

(D.397) *Aquí empieza la verdader-a historia d-el Ojo. En here begin.3SG ART.DEF:SG.F true-F story(F) of-El Ojo in aquel tiempo aún viv-ía en París y su-s foto-s DIST.SG.M time(M) still live-PST.IPFV.3SG in Paris and POSS.3-PL foto-PL iba-n a ilustr-ar un texto de go.PST.IPFV-3PL to illustrate-INF ART.INDEF:SG.M text(M) of un conoc-id-o escritor francés que se ART.INDEF:SG.M know-PTCP-M writer(M) french SUBORD REFL.3 hab-ía especializ-ado en el sub-mundo de have-PST.IPFV.3SG specialize-PTCP en ART.DEF.SG.M under-world(M) of la prostitución.*

D.13.1.3 Uses on the fringes of 'still'

D.13.1.3.1 Scalar contexts

- *Aún* is compatible with scalar contexts, both involving decreases (D.400, D.401) and limited increases (D.402, D.403). To disambiguate between the two directions of change, additional expressions can be used, such as *quedar* 'remain' in (D.401), or *sólo* 'only' in (D.402). Note, however, the absence of an 'only' marker in (D.403, D.404).
- In this use, *aún* also combines with time expressions, yielding 'no later than', as in (D.404).

(D.400) *En América Latin-a -inclu-id-a Venezuela- **aún** exist-e*

D.13.1.5 Temporal connectives and frame setters

D.13.1.5.1 Time-scalar additive ('as late as, as early as')

- **Trujillo1990**,
- In this function, *aún* combines with a time frame adverbial and operates on a scale of time proper. More commonly, the alternatives are lower times ('as late as'), as in (D.407, D.408). But there is also the occasional case in which the alternatives rank higher ('as early as'), such as in (D.409).
- This function could be subsumed under the more general scalar additive function of *aún* (Appendix D.13.1.7.2), which allows for both lower and higher alternatives. The 'as late as' use, however, finds additional motivation in the development described in Section 2.5.2.3.
- Syntax: can form a single constituent with its focus.

(D.407) Context: from a text about the origins of jewellery. The preceding sentences discusses talismans in pre-history.

D.13.1.7.2 Scalar additive

- Elvira2005, FuentesRodriguez2018, Garrido1993, GastvanderAuwera2011, Cid1999, RAEGramatica (RAEGramatica; RAEDictionary) and Trujillo1990.
- Form: negated via *ni* ‘neither, nor’ (D.419).
- As GastvanderAuwera2011 show, *aun* serves as a “universal” scalar additive, i.e. both particularly high focus values (D.416) and particularly low ones (D.418, D.419) can be vested with a high degree of pragmatic strength.
- According to Trujillo1990, this use goes back to the conventionalization of an erstwhile scalar inference in examples like (D.419).
- Syntax: can form a constituent with its focus.

(D.416) *¿Quién es éste, que mand-a aun a*

D.13.1.7.3 Scalar additive ‘so much as’: *aunque sea*

- GastvanderAuwera2011 and RAEGramatica.
- Form: in the collocation *aun-que sea* ‘still-SUBORD COP.SBJV.3SG’, i.e. lit. ‘even if it were’.
- In GastvanderAuwera2011’s (GastvanderAuwera2011) terminology, this is a BENEATH operator (‘so much as’) that is restricted to non-negative contexts.
- As GastvanderAuwera2011 point out, this collocation probably goes back to a parenthetical scalar concessive conditional involving *aunque* plus subjunctive mood (Appendix D.13.1.8.3) and the elision of the first occurrence of the focus; that is, ex. (D.420) goes back to *Si dices algo, aunque sea una palabra...* ‘if you say something, even if it’s just one word...’ RAEGramatica point out that in European Spanish *aunque sea* is often used in a postposed, prosodically set-off manner, as in (D.421). This supports GastvanderAuwera2011’s interpretation.

(D.420) *Si dices aun-que sea una palabra, v-as*

D.13.1.7.4 Comparisons of inequality

- FuentesRodriguez2018, Cid1999 and RAEGramatica (RAEGramatica, RAEDictionary).
- Note that comparisons of inequality in Spanish are formed via *más* ‘more’ / *menos* ‘less’ (with the exception of some adjectives that have suppletive comparative forms). The standard of comparison, if overtly mentioned, is introduced by subordinator *que* (RAEGramatica)
- *Aún* in comparisons of inequality yields the scalar additive notion ‘even more’. This extends to the modification of degree achievements (D.425).
- Syntax: forms a constituent with its focus.

(D.423) *Me dol-ía su belleza. Era aún más guap-a de lo que la hab-ía imagin-ado.*

D.13.1.7.5 Conjunctional adverbial: *más aún/aún más* 'what is more'

- DPDE and FuentesRodriguez2018.
- Form: in collocation with *más* 'more'.
- This is a straightforward extension of the use in comparatives (D.13.1.7.4) to the textual domain and parallel to *todavía más/todavía más* in the same function (D.13.2.8.3).
- Syntax: clause-initial position.

(D.426) *En La Habana hay también gente pobre. Más aún, en ART:DEF:SG.F H. EXIST also people poor more still hay esclavo-s.*

D.13.1.8 Broadly modal and interactional uses

D.13.1.8.1 Concessive protases (i): *aun* + gerund

- FernandezLagunilla1999, PerezSaldanyaVincent2014, RAEGramatica and Trujillo1990.
- Form: in combination with gerunds.
- This collocation serves to introduce the protasis of ordinary concessives (D.428, D.429), as well as of scalar concessive conditionals (D.430, D.431).
- As pointed out by RAEGramatica, this use is motivated by *aún* as a scalar additive (Appendix D.13.1.7.2) as well as by the fact that gerunds in peripheral position of the clause by themselves often allow for a concessive reading (cf. RAEGramatica).

(D.428) *Lo que más impresion-a de esas página-s es que, aun trat-ándo-se de una declaración de amor, la palabra amor no aparec-e nunca.*

D.13.1.8.2 Concessive protases (ii): *aun cuando*

- Elvira2005, FlamencoGarcia1999, RAEGramatica (RAEGramatica, RAEDictionary) and Trujillo1990.
- Form: in combination with a subordinate clause introduced by *cuando* ‘when’ (a collocation that can also retain a strictly temporal meaning).
- This construction governs the same systematic alternations in mood as *aunque* (Appendix D.13.1.8.3). Thus, the subjunctive mood can result in protasis of a scalar concessive conditional, as in (D.434, D.435). According to RAEGramatica, this is the more frequent case.
- This use belongs to a high/formal register.
- This use is transparently derived from *aún* as a scalar additive (Appendix D.13.1.7.2), i.e. ‘even when/if’.
- According to Elvira2005, this construction started out as marking scalar concessive conditionals.

D.13.1.8.3 Concessive protases (iii): *aunque*

- Cid1999, Elvira2005, FlamencoGarcia1999, PerezSaldanyaVincent2014, RAEGramatica (RAEGramatica; RAEDictionary) and Trujillo1990.

D.13 Spanish (spa, stan1288)

- Form: in collocation with the subordinator *que* > *aunque*.
- With indicative verbs, the *aunque* clause serves as the protasis of an ordinary concessive construction (D.436–D.438). With verbs in the subjunctive mood, two interpretations are possible. First, the clause can serve as the protasis of a scalar concessive conditional, as in (D.440–D.441) and the first interpretation of (D.439). Alternatively, the clause can be interpreted as the protasis of an ordinary concessive, with the proposition contained in it constituting given information that is commented upon; this is the second interpretation of (D.439).
- As pointed out repeatedly in the literature, this function can be traced back to *aún* as a scalar additive (Appendix D.13.1.7.2), with *que* introducing a clausal complement. As Elvira2005 and PerezSaldanyaVincent2014 show, its function in scalar concessive conditionals is older than its non-conditional counterpart.

D.13.1.8.4 Concessive protases (iv): *aun si*

- Elvira2005 and RAEGramatica.
- Form: in collocation with *si* ‘if’.
- This is another transparent use involving the scalar additive function of *aún* (Appendix D.13.1.7.2), i.e. ‘even if’. Judging from the description, this collocation always introduces scalar concessive conditionals; the latter are, according to Elvira2005, also what is found in the earliest attestations. Consequently, past tense predicates (which also feature in counterfactual conditionals) take the subjunctive mood, as in (D.443). Present tense predicates, however, surface in the indicative mood, due to collocational restrictions of *si* ‘if’ (D.443).

would be arbitrary to draw analogies between his life and his works based on a mere biographical coincidence.' (CORPES XXI, glosses added)

D.13.1.8.5 Universal concessive conditional protases: *aunque más*

• RAEDictionary.

- Form: in collocation with the subordinator *que* and *más* 'more, most'.
- This use is clearly derived from *aunque* governing the protases of concessives and concessive conditionals (Appendix D.13.1.8.3): 'even if it is/were the most ...' > 'no matter how much'. What is at play here is that the conditional relationship is asserted to hold under the most adverse circumstance, thus (all things equal) across the entire set of conceivable circumstances.

(D.444) *Pero aun-que más tend-imos la vista, ni*

protest-ó.

protest-PST.PFV.3SG

‘S/he was the one who had the most space, and yet s/he complained.’
(RAEDictionary, glosses added)

D.13.1.8.7 Concessive apodoses (ii): *aun así*

- DPDE, FuentesRodriguez2018 and RAEGramatica.
- Form: in collocation with *así* ‘so’. DPDE point out the prosodic separation from the rest of the clause, indicated by a comma in (D.449).
- This collocation is clearly motivated by *aún* as a scalar additive (Appendix D.13.1.7.2), transparently yielding ‘even so’.

(D.448) *Los muchacho-s se mir-aron entre ellos,*

still so mumble-PST.PFV.3SG
“Even so”, she mumbled.’ (CORPES XXI, glosses added)

D.13.2 *todavía*

D.13.2.1 General information

- Wordhood: independent grammatical word, invariable.
- Etymology: from a late Latin phrase ‘all (the) way’, via ‘one way or another’ and ‘always’.

D.13.2.2 As a ‘still’ expression

- vanderAuwera1998, Bosque2016, EderlyCurco2016, Garrido1991 (Garrido1991, Garrido1992, Garrido1993), Morera1999, RAEGramatica and Trujillo1990, among many others.
- Specialization: several descriptions (e.g. Bosque2016; EderlyCurco2016; Garrido1991; RAEGramatica) explicitly address the two components of my definition.
- Polarity sensitivity: inner negation yields NOT YET.
- Pragmaticity: compatible with both scenarios.
- Further note: *todavía* can be used as an elliptical utterance (D.454).

D.13.2.4 Uses on the fringes of ‘still’

D.13.2.4.1 Scalar contexts

- **Garrido1992** (Garrido1992, Garrido1993).
- *Todavía* is compatible with scalar contexts, both in the form of decreases (D.457, D.458) and increases (D.459–D.461). To disambiguate, *todavía* can be combined with expressions like *quedar* ‘be left’ or *sólo* ‘only’, as in (D.458, D.459). Note, however, that a restrictive marker is not categorically necessary in contexts of a limited increase, as evidenced by examples like (D.460, D.461).

- (D.457) *La Armada ten-ía 337 vehículo-s y se*

 Irún is still in Spain and Hendaya is in France already.’
 (Garrido1991, glosses added)

D.13.2.7.1 Marginality, ‘with acceptable limits’

- **Bosque2016 and Deloor2012**

- In this function, illustrated in (D.472, D.473), *todavía* depicts a state-of-affairs as a borderline case of what is socially acceptable. All examples in the literature feature the juxtaposition between a factual, unacceptable state-of-affairs and a hypothetical, marginally acceptable one.
- As pointed out by **Bosque2016** and **Deloor2012**, this is an extension of the marginality function of *todavía* (Appendix D.13.2.7). In all likelihood, this goes back to the elipsis of an evaluative predicate. Cases like (D.474), where a clausal complement separates *todavía* from the predicate, could have facilitated this deletion.

- (D.472) *En el coche, en la mesa, en la*

D.13.2.8 Additive and related functions

D.13.2.8.1 Additive

- **Bosque2016**, **Garrido1993**, **RAEGramatica** and **Trujillo1990**.
- A scalar inference may arise in certain contexts (D.477); in fact, in some American varieties of Spanish *todavía* serves as a scalar additive.
- In narrative contexts, this often involves a last event in a series, particularly with predicates of the ‘manage to, find time to’ kind (D.479).
- **Bosque2016**, **RAEGramatica** point out that examples like (D.478) are ambiguous between a phasal polarity reading and an additive one.

D.13.2.8.2 Comparisons of inequality

- Bosque2016, Cid1999, EderlyCurco2016, Garrido1993, Martinez1996, Morera1999 and RAEGramatica.
- Note that comparisons of inequality in Spanish are formed via *más* ‘more’ / *menos* ‘less’ (with the exception of some adjectives with a suppletive comparative form). The standard of comparison, if overtly mentioned, is introduced by subordinator *que* (RAEGramatica). *Todavía* contributes the notion of ‘even more’.
- Bosque2016 notes the functional overlap between *todavía* as STILL and the comparative usage function in the context of degree achievements (D.483).

D.13.2.9 Restrictive (non-temporal)

D.13.2.9.1 Scalar restrictive *todavía si* ‘if at least’

- Bosque2016, Deloor2012 and RAEDictionary.
- Form: in combination with *si* ‘if’ introducing the protasis of a counterfactual conditional.
- In this function, *todavía* indicates that the condition depicted in the protasis constitutes a minimal requirement. This reading is very close to the ‘within acceptable limits’ (D.13.2.7.1). Like the latter, it can be considered an extension of a construal of marginality (Appendix D.13.2.7).
- Ellipsis of the apodosis is common (D.488).

 glosses added)

D.13.2.10 Broadly modal and interactional uses

D.13.2.10.1 Concessive protases: *todavía que*

- Bosque2016, Cid1999, Morera1999 and RAEGramatica.
- Form: together with a clause introduced by the subordinator *que*.
- In present-day Spanish, this use is restricted to the Americas.
- According to Morera1999 and RAEGramatica, *todavía que* can often be paraphrased as *encima de que p* 'on top of *p*', which suggests an additive component and parallels what is found with *todavía* as a marker of concessive apodoses (Appendix D.13.2.10.2).
- Bosque2016 sees an additional link between this use and the scalar element of the time-scalar additive 'as late as' function (Appendix D.13.2.6.1).

- (D.489) *Mi herman-o es un entrometid-o, bien infantil,*
 POSS.1SG sibling-M COP.3SG ART.INDEF:SG.M nosey-M well childish

D.13.2.10.2 Concessive apodoses

- Bosque2016, Cid1999, Deloor2012, EderlyCurco2016, Garrido1993, Morera1999 and RAEGramatica.
- This concessive function has been described as often involving an additive notion (RAEGramatica), which is particularly salient in cases like (D.491, D.492) and which corresponds to what is found with its protasis marking counterpart *todavía que* (Appendix D.13.2.10.1). As a correlate, EderlyCurco2016 point out that concessive *todavía* is not congruent with concessive *still*, i.e. *#Trataron de ayudarle, pero todavía murió* 'They tried to help him, but he still died.'
- Bosque2016 speculates that the presence of the universal quantifier *toda* provides additional motivation for its use, given its presence in concessive expressions like *con todo* lit. 'with all', *de todas formas*, *de todas maneras* 'anyway'.

- (D.491) *Y todavía tuv-iste el descaro de and still have.PST.PFV-2SG ART.DEF:SG.M impudence(M) of enviar-me una tarjeta en la que send.INF-1SG.OBJ ART.INDEF:SG.F card(F) en ART.DEF:SG.F SUBORD me dec-ías "Compañer-a: Cuba es extraordinari-a" .*

 'I helped him yesterday and nevertheless he complains.'
 (EderlyCurco2016, glosses added)

D.14 Thai (tha, thai1261)

Introductory remarks My understanding of the Thai data has greatly profited from discussion with Chingduang Yurayong, who also provided additional examples, helped with glosses, and aided in standardizing the transliteration. The Thai STILL expression *yan* often co-occurs with the post-predicate auxiliary *yúu*, for simplicity here glossed as CONT 'continuous', as in (D.495). This marker, originally a locative copula, has a general function of signalling that a situation is transient (see Jenny2001). In many of its extended functions, *yan* combines with a morpheme *kɔ*, for present purposes glossed as DM 'discourse marker'. This is a notoriously versatile item which covers many functions broadly related to linkage, such as additive 'also', clause linkage ('so, and then'), or hesitation ('well...'); see IwasakiIngkaphirom2005. In addition, *kɔ* also serves as a main clause marker conveying a notion of relevance or evaluation (IwasakiIngkaphirom2005). For an attempt at unveiling its etymology see Burusphat2004.

D.14.1 *yan*

D.14.1.1 General information

- Form: found in various transliterations (*yan*, *yang*, *ya:ng*, *yung*, and *jan*).
- Wordhood: independent grammatical word, invariable.
- Syntax: fixed position, immediately after the subject and before all elements belonging to the predicate.
- Etymology: originally a locative copula.

D.14.1.2 As a 'still' expression

- vanBaar1997, CampbellShaweevongs1982, HigbieThinsan2002, IwasakiIngkaphirom2005, Jenny2001, Noss1964 and Smyth2002.

D.14 *Thai (tha, thai1261)*

- Specialization: the descriptive materials show that this marker conforms to my definition; see especially **Jenny2001**, who explicitly mentions the incompatibility of *yaŋ* with inalterable states. The expression is also identified by **vanBaar1997** as one that is in line with my definition.
- Pragmaticity: according to **vanBaar1997** *yaŋ* by itself is restricted to the neutral scenario, whereas in the unexpectedly late scenario *yaŋ* is combined by *talɔ̄t* ‘throughout, completely’. This data considered for the present study, however, suggest that *yaŋ* by itself is compatible with both scenarios. For instance, (D.496) looks like a prototypical case of the late scenario, albeit bordering on a concessive reading.
- Polarity sensitivity: inner negation yields NOT YET.
- Further note: according to **Jenny2001**, *yaŋ* is incompatible with imperatives and prohibitives.

(D.494) *Rau yáay maa yùu kruŋth̄ēep tâŋt̄ēe chán yaŋ dèk.*

'No, she's still only fourteen years old.' (Chinduang Yurayong, p.c.)

D.14.1.3 Uses related to other phasal polarity concepts

D.14.1.3.1 Not yet (and interrogative 'yet')

- vanBaar1997, CampbellShaweevongs1982, HigbieThinsan2002, IwasakiNgkaphirom2005, Jenny2001, Noss1964, and Smyth2002.
- *Yai* as NOT YET without negation is attested in the following two contexts, both (originally) characterized by the absence of an overt predicate:

⁶⁷<http://www.thai-language.com/id/246826> (27 February, 2023).

D.14 Thai (tha, thai1261)

- In polar questions that follow a pattern *léew rúuu yan* ‘already or still > ‘already or not yet’ (D.501). This can be understood as an instantiation of a broader ‘or NEG’ pattern of question formation (e.g. Iwasaki¹Ingkaphirom2005; HigbieThinsan2002). This question tag is undergoing erosion: *léew* ‘already’ or *rúuu* ‘or’ can be dropped (D.502, D.503). What is more, omission of both is attested as well, leaving *yan* as interrogative ‘yet’ in direct (D.504) and indirect questions (D.505). Note that Thai does not make use of negative raising with *yan* (Chingduang Yurayong, p.c.); instead *léew* ‘already’ is used in the subordinate clause (D.506).
- As a negative response (D.503).

(D.501) *Thíŋ còtmääay pai tûu praisanii léew rúuu yan?*
 throw letter go box mail already or still
 ‘Did (you) put the letter into the mail-box or not yet?’
 (Koelver1991, glosses added)

⁶⁹<http://www.thai-language.com/id/246231> (10 June, 2021).

D Eurasia

D.14.1.4 Marginality

- *Yay* is compatible with a marginality use.
- As with many functions of *yay*, in this use it tends to be accompanied by *kɔɔ*, as in (D.507, D.509). Example (D.508) shows, this appears not to be compulsory.

(D.507) Context: talking about tennis skills.

Thom chán yay chaná dâi. / Chán yay chaná thom dâi.

Tom 1SG still win can 1SG still win Tom can
'Tom I can still beat / I can still beat Tom (but other players are too good for me).' (Chingduang Yurayong, p.c.)

(D.508) *Mékdonâl thiinân pheeŋ kwâa tèe kɔɔ yay thùuk yùu.*

McDonald's there expensive exceed but DN still cheap CONT

 keep
 ‘There are also individuals in Thai history who are noteworthy ...’
 (found online)⁷¹

D.14.1.5.2 Scalar additive

- **HigbieThinsan2002** and **Noss1964**.
- It appears that addition of *kɔɔ*, as in (D.514) gives a strong emphasis to the scalar reading (Chingdong Yurayong, p.c.)
- Several examples, including (D.512) feature an additional additive marker *dûay*.

- (D.512) *Phòm chûay kháu talɔɔt. baanjhrán yan hâi ɳyn kháu dûay.*
 1SG help 3 all_the_time sometimes still give money 3 also
 ‘I help him all the time. Sometimes I even give him money.’
 (HigbieThinsan2002, glosses added)

 walk DM still NEG manage
 ‘No (thanks). I’m not feeling very well. Not only can’t I eat, but I can’t
 even walk.’ (found online)⁷³

D.14.1.5.3 Comparisons of inequality

- **HigbieThinsan2002** and **Zhang2017**.
- Note that Thai makes use of an exceed-comparative construction (**Stassen2013**), where the marker *kw  a* follows the predicate and precedes the standard of comparison.

⁷¹<http://www.thai-language.com/id/214624> (27 February, 2021).

⁷²<http://www.thai-language.com/id/247337> (11 March, 2021).

⁷³<http://www.thai-language.com/id/230604> (10 June, 2021).

D Eurasia

- Addition of *yan* indicates ‘even more’.
- There appears to be a preference for *yan* to be used with predicates denoting the lower end of a scale (Chingduang Yurayong, p.c.), which is reflected in the examples found in the literature: *cháa* ‘slow’ in (D.515, D.516) and *nǎaw* ‘cold’ in (D.517).

(D.515) *Kháu yan phûut cháa kwàa.*

3 still speak slow exceed

‘He speaks even more slowly (than someone else).’ (Noss1964, glosses added)

(D.516) *Phöm wîŋ cháa léεw (tèε) kháu yan cháa kwàa phöm iik.*

1SG run slow already but 3 still slow exceed 1SG more

‘I run slowly, but he runs even more slowly than I do.’

(HigbieThinsan2002, glosses added)

(D.517) *Thaan tawan?òɔk kɔɔ yan nǎaw kwa..*

way east DM still cold exceed

‘It is still colder on the east side’. (Zhang2017)

D.14.1.6 Broadly modal and interactional functions

D.14.1.6.1 Concessive apodoses

- HigbieThinsan2002, Jenny2001, and Noss1964.
- In this function, *yan* is often preceded by the discourse marker *dûay*, as in (D.519) and –optionally– in (D.520).

(D.518) *Méetèe yâatphiinòŋ khɔŋ kháu kháu yan mài chûay lyy*

(HigbieThinsan2002, glosses added)

⁷⁴<http://www.thai-language.com/id/216252> (01 March, 2021).

D.15 Tundra Nenets (yrk, nene1249)

- (D.520) *Tháñtháñthii fõn tòk tèe rau (kô) yan pai..*
 even_though rain heavy but 1PL DM still go
 'Although it's raining, we're still going' (Smyth2002, glosses added)

D.15 Tundra Nenets (yrk, nene1249)

Introductory remarks Apart from descriptive materials I searched **NikolaevaEtAl2019**'s (**NikolaevaEtAl2019**) online text collection. I am furthermore indebted to Irina Nikolaeva and Tapani Salminen for discussing Tundra Nenets data with me and for helping with glosses.

D.15.1 *təmna*

D.15.1.1 General information

- Form: also transcribed as *tamna* and, in Cyrillic, *мамна*.
- Wordhood: independent grammatical word; mostly invariable, but takes person-number and tense marking in its 'not ready yet' function (Appendix D.15.1.4).
- Etymology: related to the pronominal stem *ta*, which also has a temporal meaning 'then', plus proative *mna*, i.e. 'through then' (Janhunen1977; Salminen1998).

D.15.1.2 As a 'still' expression

- Janhunen1977, Lehtisalo1956, Nikolaeva2014 and Tereshchenko2008.
- Specialization: the descriptions and dictionary entries, when taken together, give a good indication that this item corresponds to English *still*, German *noch* and Russian *есчё*. This also becomes evident in examples like (D.521–D.523). For instance, in (D.521) *təmna* restricts the time frame to one in which the speaker and companions continue to be children, as opposed to being grown up.
- Polarity sensitivity: inner negation yields NOT YET.
- Pragmaticity: the data allow for no conclusions.
- Syntax: in phasal polarity function, *təmna* typically precedes the predicate and object, but follows the subject NP.

- (D.521) Context: from the opening paragraph of an autobiographical account.

Tí pæ[°]rt'a[°] **təmna** n'ada-ŋko-s[°]ti-waq

D.15 Tundra Nenets (*yrk, nene1249*)

D.15.1.4 Uses related to other phasal polarity concepts

D.15.1.4.1 Not (ready) yet

- Lehtisalo1956, Nikolaeva2014 and Tereshchenko2008.
- This function occurs in the absence of a propositional complement and conveys the notion of ‘not ready yet’ (D.526, D.527). In this use, *təmna* can take tense and person-number marking (D.526).
- There is also a collocation *təmna-rka* ‘still-CMPR’ ‘not quite yet’, see (D.528). This is probably best understood as scalar, with comparative *-rka* contributing a notion of ‘a bit’ (see Nikolaeva2014 on this function of the comparative suffix). That is, ‘still a bit’, which is also the translation given by Lehtisalo1956. In structural terms, however, this is the only other case in which *təmna* can serve as a main predicate.

(D.526) *Təmna-d^om-c^o*.

still-1SG-PST

‘I wasn’t ready yet.’ (Nikolaeva2014)

(D.527) *Təmna* *ŋæ-wi^o*.

still COP-EVID

‘He wasn’t ready, apparently.’ (Nikolaeva2014)

(D.528) Context: Lobeku’s mather has revived a dead man.

Lobeku-h n’eb’ a ma: “Təmna-rka. ɿarka tu-h yad’o-xəna

L.-GEN mother say still-CMPR big fire-GEN heat-LOC

 still one place-GEN bull-ACC kill
 ‘He killed another mammoth.’ (Labanauskas 1995: 18, cited in Nikolaeva2014)

D.15.1.6.2 Comparisons of inequality

- Lehtisalo1956 and Tereshchenko2008.

D.16 Udihe (ude, udih1248)

- Tundra Nenets uses a from-comparative in which the standard of comparison is marked in the ablative case. Comparative marking on the predicate itself is highly optional (Nikolaeva2014).
- Addition of *təmna* yields ‘even more’. This is attested with comparisons in the strict sense (D.535). It is also found with “degree achievements” (Dowty1979), as in the combination of motion verb and adverbial in (D.536).

(D.535) *Тамна саваркавна*

still forth go-HAB-EVID

‘It seemed the older brother had been killing and skinning all sorts of wild reindeer, and then moving on even further.’ (Nikolaeva2014)

D.16 Udihe (ude, udih1248)

Introductory remarks Apart from the grammars listed below I consulted NikolaevaEtAl2002’s (NikolaevaEtAl2002, NikolaevaEtAl2003, NikolaevaEtAl2019) text collections. Note that the relevant Udihe marker, *xai(si)*, is a very frequent item in texts, with the exact contribution of many instances remaining unclear. My categorization of those uses not discussed in the descriptive materials is therefore but a first approximation.

D.16.1 *xai(si)*

D.16.1.1 General information

- Form: two freely exchangeable variants, *xai* and *xaisi*.
- Wordhood: free morpheme.
- Etymology: from Mandarin Chinese *hái(-shi)*.

D.16.1.2 As a ‘still’ expression

- NikolaevaTolskaya2001 and Schneider1936.

D Eurasia

- Specialization: textual attestations like (D.537–D.539) give evidence that this expression conforms to my definition. For instance, in (D.537) *xaisi* not only indicates that the dog continued to be young, but it also evokes an alternative scenario in which she is no longer young and would consequently be harnessed.
- Pragmaticity: compatible with both scenarios; (D.539) is a prime candidate for an unexpectedly late continuation.
- Polarity sensitivity: inner negation yields NOT YET.

(D.537) Context: the narrator, together with her family and dog, is preparing to end a hunting trip and go home.

In'ei-we e-u alu, pal'ma, mene beje-zi unjkäla-u,
 dog-ACC NEG-1PL.EXCL harness P. REFL self-INS fetch-1PL.EXCL

D.16 *Udihe (ude, udih1248)*

the third day we came back and asked: “Why are you sleeping?”
 (NikolaevaEtAl2019)

D.16.1.3 Uses on the fringes of ‘still’

D.16.1.3.1 Scalar contexts

- At minimum the tokens in (D.540, D.541) involve scalar contexts in the form of decreases over time.

(D.540) Context: a couple had stored some dried meat, wrapped with birch tree bark.

Uta-digi uti=de xai wac'a esi-gi-e-ni, tunja=as

 (NikolaevaEtAl2019)

(D.541) Context: a girl has found a dog’s head.

In'ei xai omo dili=mei xai inixi.
 dog still one head=only still alive
 ‘Although there was only a head left from the dog, it was nevertheless alive.’ (NikolaevaEtAl2019)

D.16.1.3.2 Sameness

- NikolaevaTolskaya2001.
- This function occurs in combination with distal anaphoric pronouns of the shape (*u*)*t*- and expresses identity of the referent.
- In many textual attestations, the referent of the anaphoric pronoun is a situation, which, in turn, either continues or is repeated with different participants, thereby providing a link to the phasal polarity, additive, and iterative functions of *xai(si)*. For instance, a more literal translation of (D.543) is ‘the way he used to walk, he still walks that way’ and (D.544) could be paraphrased as ‘... that also happened to my wife’.

(D.542) *Ni: lä bazagele lali:nzi budei, zeude ei diga ilama nejini, uti ni:we mene e:tigi mene yenezenei <mene yenezenei>*
 ‘Many people in the taiga die from hunger. If a human doesn’t eat anything for three days, the tiger directs this person to where it has to go.’

D.16.1.4 Broadly adverbial temporal-aspectual adverbial functions

D.16.1.4.1 Iterative and restitutive

- NikolaevaTolskaya2001 and Schneider1936.
- Iterative *xai(si)* often occurs in conjunction with the additive/iterative marker *ñā* and/or the iterative verb suffix *-gi*, as in (D.547).
- According to NikolaevaTolskaya2001, iterative *xai(si)* has "the whole sentence in its scope" and involves "the complete repetition of a situation". There are, however, several instances in which an event is repeated, but with a different object, as in (D.549). In these cases, the line between the iterative use and the additive function (Appendix D.16.1.5.1) becomes blurred.
- Several instances in the data, including (D.550, D.551), involve a restitutive reading. It is noteworthy that the majority of them additionally feature the iterative suffix *-gi*, which by itself can mark restitution; see (D.551).
- According to NikolaevaTolskaya2001, iterative/restitutive *xai(si)* always goes along with a bounded viewpoint. Ex. (D.548) indicates that this is a strong tendency rather than a fixed rule.
- Syntax: mobile, but typically close to the predicate, often preceding it.

D.16 *Udihe (ude, udih1248)*

- (D.545) Context: a hero has been killed once, and nearly died one another occasion. A shaman warns him.

‘This tree is as high as that one.’ (NikolaevaTolskaya2001)

D.16.1.5.2 Comparisons of inequality

- The two attestations in (D.556, D.557) indicate that *xai(si)* can be used in comparisons of inequality. Note that Udihe makes use of a locational comparative structure (Stassen2013): the standard of comparison –if explicitly mentioned– is marked with the ablative case, and there is no overt marking of the comparison on the predicate (NikolaevaTolskaya2001).
- The use of *xai(si)* appears to add the scalar additive notion of ‘even’.

- (D.556) *Ñädiga wa:-la bi nuan-digi xai wa:-la bi-mi.*

run-3SG

‘The Moose ran [even] faster, his antlers and legs stick out.’

(NikolaevaEtAl2019)⁷⁶

D.16.1.5.3 Switch/contrastive topic

- A few tokens of *xai(si)* in texts appear to involve switch topic/contrastive topics. For instance, in (D.558), *xaisi* appears to indicate a switch in topic from the tiger’s role in culture to a description of its physical appearance.
- While this function is not described in NikolaevaTolskaya2001, cross-linguistically this is a common functional extension of markers with additive functions (Forker2016)

- (D.558) Context: about tigers. They are considered to be God’s animal.

Ute bi:, ijakta-na-ni xaisi oño-ni,

Appendix E: North America

E.1 Classical Nahuatl (nci, clas120)

Introductory remarks I am indebted to Michel Launey for discussing Nahuatl data with me and for helping with some difficult glosses. Classical Nahuatl has two **STILL** expressions: *nozan* and *oc*. Only for the latter do I have clear indications of additional functions.

E.1.1 *oc*

E.1.1.1 General information

- Form: also transcribed as *ok*, and as *oqu-* in certain compounds.
- Wordhood: free morpheme, but can cliticize.
- Etymology: Karttunen1992 suggest that this marker is related to the numeral *ōme* ‘two’. vanBaar1997 reports personal communication from Michel Launey that this proposal is implausible for several morphophonological reasons. vanBaar1997 instead suggests a tentative link to the verb *onoc* ‘be lying, be stretched out’.

E.1.1.2 As a **STILL** expression

- Andrews2003, Bierhorst1985, Carochi1645, Karttunen1992 and Launey1986 (Launey1986, LauneyMackay2011); further discussion throughout vanBaar1997.
- Specialization: vanBaar1997 identifies this marker as a **STILL** expression. This is supported by examples such as (E.1–E.3). For instance, in (E.1) *oc* not only involves the continuation of a prior habit, but also strongly suggests a contrast with people’s behaviour at the time of speech.
- Pragmaticity: according to vanBaar1997 this expression is used for the neutral scenario; for the simultaneously counterfactual scenario it is augmented by an item *nohmah*, as in (E.3), or a different **STILL** expression altogether, *nozan*, is used.
- Polarity sensitivity: outer negation yields NO LONGER.
- Further note: ex. (E.4) illustrates the use in an imperative.

Itzcuaūhtzin.

I.

‘And when the sun was about to set, when there was still a little sun, thereupon Itzcuauhztzin cried out.’ (Andrews2003, glosses added)

E.1.1.3.2 Scalar contexts: preceding time span

- Carochi1645 and Launey1986 (Launey1986, LauneyMackay2011); additional discussion in vanBaar1997.
- This is a complex clause pattern that signals a time span before a situation ‘(it is) *t* before *q*’. It surfaces in two types of constructions:
 - A clause pattern **[[in (icuāc) q] [oc p]]** ‘DET (when/then) *q*, still *p*’, i.e. ‘when *p*, it is still a certain amount of time’ (E.6, E.7). In this case, *oc* can be accompanied by the ALREADY expression *ye* to introduce a dual perspective, both from the situation forward to utterance time or another evaluation time (*oc*) and from there backwards (*ye*); see (E.8).
 - A clause pattern **[[oc p] [(in) q]]** ‘still *p*, (DET) *q*’ where the subordinate clause features either the prospective inflection or an imperfective venitive form. That is, ‘it is still a certain amount of time, *q* is going to happen/is approaching’. This is illustrated in (E.9, E.10).
- This function is undoubtedly an extension of a scalar use of *oc*, i.e. ‘(it is still) a certain amount of time (then)’. Note how the inverse perspective (‘[it is] already ... [ago]’) is expressed using the ALREADY expression *ye* Launey1986).

 ‘And here is yet another thing.’ (Langacker1977)

- (E.27) *Oc ōme.*
 still two
 ‘They are another two / they are two more.’ (Andrews2003, glosses added)

E.1.1.6.2 Comparisons of inequality

- Andrews2003, Carochi1645 and Launey1986 (Launey1986, LauneyMackay2011).
- Classical Nahuatl makes use of several comparative strategies (see Stassen2013 for typological discussion of these). These are conjoined comparatives, predom-

E.1 Classical Nahuatl (nci, clas120)

inantly in the form of an affirmative and a negative stament ('X has property, when Y does not'), exceed-type comparatives, and combinations of both.

- *Oc* commonly features in comparative constructions, particularly as part of the collocation *oc achi* 'still a bit, still rather', which is used in conjoined comparatives (E.28). It seems that its contribution here is to mark the comparative degree itself 'an additional/another somewhat (that the standard does not possess)'. This usage extends to other degree marking expressions, such as *cencà* 'much', *tāchcāuh* 'superior thing', *tlapanahuia* 'it exceeds' and, often, combinations of these (E.29). In other words, it this is an instantiation of the additive (Appendix E.1.1.6.1) and/or alterative (Appendix E.1.1.6.3) senses of *oc*.
- It is not entirely clear whether *oc* can also have a 'even more' reading. Though such a translation is attested (E.30), it could be a contextual inference going back to standard of comparison possessing the quality in question.

E.1.1.6.3 'other, different'

- Andrews2003, Bierhorst1985, Karttunen1992 and Launey1986 (Launey1986, LauneyMackay2011).

E North America

- Form: in this function, *oc* combines with a quantifier, usually a form of *cē/cen* ‘one’.
- In this function, *oc* plus its associated constituent refer to other entities of the same type, be it other members within an established set, as in (E.31), or merely a different entity of the same type, as in (E.32, E.33).
- This is clearly related to the additive function of *oc*, as observed before me by Launey1986; also note similar colexification in items like English *another*, Spanish *otro*, etc.
- Examples like (E.34), which involves both additivity and a pre-established set, possibly constitute bridging contexts.

 SBJV-REFL-be_wise-LNK-live
 ‘Pues que eres bien nacido ... viue con cordura. [Since you are noble,
 live wisely]’ (Carochi1645, glosses added)

E.2 Creek (mus, cree1270)

Introductory remarks Apart from descriptive materials I consulted the text collections by Gouge2004 and HaasHill2014. My understanding of Creek data has furthermore greatly profited from discussion with Jack Martin, who also helped with many glosses and elicited additional examples.

E.2.1 (i)monk

E.2.1.1 General information

- Form: this expression comes in two forms. The most frequent is a verb/auxiliary (*i*)*mónk* that nearly always goes together with the durative aspect suffix *-i* on the preceding lexical verb. Much less frequently, a nominalized form *imónka* occurs, typically together with a copula, as in (E.41, E.46) below.
- Wordhood: intermediate (verb/auxiliary).

E.2 Creek (mus, cree1270)

- Etymology: in all likelihood, this item is cognate with the Choctaw expression *moma* ‘still, be all’ (Jack Martin, p.c.). In addition, Creek has an item (*i*)*môñka* with the meaning ‘nature or habit (of smth.), smth. permanent or natural’ (Martin2011; MartinMcKaneMauldin2000). All this suggest that the origins of (*i*)*môñk* lie in denoting the permanence and or extended duration of a state-of-affairs.

E.2.1.2 As a ‘still’ expression

- Martin2011 and MartinMcKaneMauldin2000.
- Specialization: this is a borderline case of a STILL expression. On the one hand, there are examples like (E.40–E.42) that point towards both main components of my definition. For instance, the discourse context of (E.40) suggests that the auxiliary serves a dual purpose of indicating persistence with an earlier tradition, as well as establishing a contrast with the time of speech, where the square ground no longer exists; also see (E.51, E.53) below. On the other hand, there are also instances of it with a more general ‘keep doing, do persistently meaning’ (see Appendix E.2.1.3.3). Given that its origins may lie in a marker of permanence or stability, it is conceivable that (*i*)*monk* is currently developing into a full-fledged phasal polarity expression. This process appears to have been completed with its Cochtaw cognate *moma* (see Broadwell2006; ChochtawDictionary).
- Pragmaticity: compatible with both scenarios. It is not entirely clear if the unexpectedly late scenario requires additional marking. Creek frequently makes use of the copula *om* or of positional verbs to emphasize an assertion (see Martin2011) –it is conceivable that this strategy might also come into play in signalling the unexpectedly late scenario of STILL.
- Polarity sensitivity: inner negation yields NOT YET (or a closely related notion).

- (E.40) Context: from the opening paragraph of an expository text about the last game of stickball at the village square ground.

Kawita im-pa:skó:fa lêyk-i: móyk-o:f,

(HaasHill2014; glossed added)

E.2.1.3.2 Same

- **MartinMcKaneMauldin2000.**
- The meaning is one of permanence over time, i.e. closely related to both STILL and to the likely etymology of (*i*)*monk*. For instance, in (E.45), the dances have not changed over time.
- Addition of diminutive -os is common and seems to strengthen the notion identity, along the lines of ‘just the same’ (Jack Martin, p.c); this is in line with the functions of this suffix (see **Martin2011**)
- A case like (E.46), which pairs persistence with zero anaphora may feature a bridging context. Example (E.47) is similarly close in that it could be read as ‘... and you will persist’.

- (E.45) Context: According to customs they would have fasts and

³The segmentation of -ta-n as a contraction of -t o:m-a:n ‘-ss COP-REF.DS’ is tentative.

E North America

E.2.1.3.3 Keep Verb-ing

- **Martin2011.**
- There are several instances of (i) *monk* in the data that contribute a notion of ‘keep doing, do persistently’. Often, but not always, this involves a notion of iterativity (E.48, E.49).

- (E.48) Context: a hunter has crept towards a doe and her fawns. They haven’t taken notice of him.

Ani-ó ayo:pk-éy-t o:m-éy-ka ani-ó a:y-ay-í:

“Admit you said it”, she kept saying [telling him] ...’

(HaasHill2014, glosses added)

E.2.1.4 Temporal connectives and frame setters

E.2.1.4.1 Simultaneous duration

- **Martin2011** and **MartinMcKaneMauldin2000.**
- Of the relevant tokens in the data that feature affirmative polarity, all are compatible with a reading of ‘while still’, and it might rather be a matter of how prominent the latter is vis-à-vis a reading of purely simultaneous duration.
 - Several instances feature cohesive clauses restating a situation that has been described earlier (E.50). In one instance, it is the inception of the situation that has been introduced before (E.51).
 - In other cases the situation in question can be retrieved from context, in that they all involve advice given to adolescents, as in (E.52).
 - In yet other instances, (i) *monk* appears to narrow down the temporal frame. For instance, in (E.53) it is a hunter’s habit to set out at night, the implicit alternative being that he leaves later.
- In combination with internal negation this yields precedence, i.e. ‘when NOT YET *p*’ > ‘before *p*’, as in the second instance in (E.51). This is a common extension of NOT YET constructions; see Section 2.5.3.3.

E.2 Creek (mus, cree1270)

E.3 *Gitxsan/Nisga'a (git, gitx1241/ncg, nisg1240)***E.3 Gitxsan/Nisga'a (git, gitx1241/ncg, nisg1240)**

Introductory remarks The data includes both Gitxsan (git, gitx1241) and Nisga'a (ncg, nisg1240), the two of which are closely related and mutually intelligible (e.g. Rigsby1986), and the relevant expression, *k'ay*, encompasses the same functions.

E.3.1 *k'ay***E.3.1.1 General information**

- Wordhood: independent grammatical word, invariable.
- Syntax: fixed, in preverbal position.

E.3.1.2 As a 'still' expression

- Aonuki2021, Tarpent1987 and Rigsby1986.
- Specialization: Aonuki2021 addresses the presupposition of a previously ongoing situation, and Tarpent1987's (Tarpent1987) discussion suggests the invocation of an alternative discontinuation scenario.
- Polarity sensitivity: not attested in combination with negation; NOT YET is expressed by a separate item *haw'en*
- Pragmaticity: the data allow for no conclusion.

(E.59) *K'ay hli~hlgutk'ihlkw-t.*
still DUR~child-3

E.4 Kalaallisut (kal, kala1399)

Introductory remarks Apart from descriptive materials, I consulted *BittnerTexts*’s (*BittnerTexts*) online text collection.

E.4 *Kalaallisut (kal, kala1399)*E.4.1 *suli*

E.4.1.1 General information

- Wordhood: free morpheme.
- Syntax: relatively free, although virtually all attestations in the data consulted precede the predicate, either immediately, or with one or more nominal arguments intervening; the only exception is (E.69) below.
- Etymology: from Proto-Eskimo **cu(na)li* ‘still (more)’, where *cu(na)* is an interrogative root ‘do what’ and *li* is probably a third person optative marker.

E.4.1.2 As a ‘still’ expression

- Bergsland1955, Bjornum2012, Fortescue1984 and FortescueEtAl1984; additional discussion throughout vanBaar1997.
- Specialization: vanBaar1997 identifies this marker as one that is in line with my definition; additional, albeit indirect, evidence comes from its use as NOT YET (Appendix E.4.1.3.1).
- Polarity sensitivity: inner negation yields NOT YET. This also serves as a signal of precedence in temporal clauses (‘while NOT YET *p*’ > ‘before *p*’); see the numerous attestations throughout BittnerTexts’s (BittnerTexts) text collection.
- Pragmaticity: according to vanBaar1997, in the unexpectedly late scenario *suli* is augmented by marking the verb with the suffix *-juar* ‘keep doing’ (see Fortescue1984 on the latter).
- Further notes: ex. (E.70) suggests that *suli* is compatible with the anterior aspect *-sima* under a resultative interpretation.

(E.67) *Ilianniartitsisur=mi suli atuarvim-miik-kallar-pa?*

E.4.1.3 Uses related to other phasal polarity concepts

E.4.1.3.1 Not yet

- Fortescue1984; additional discussion is found in vanBaar1997.
- This function is only attested as a negative answer to a polar question.

- (E.71) *Sinippa?* – *Suli (naamik)*.
 sleep-3SG.Q still NEG
 'Is he sleeping? – Not yet.' (Fortescue1984)

E.4.1.4 Broadly adverbial temporal-aspectual functions

E.4.1.4.1 Iterative via increment

- One token in the data consulted (E.72) appears to be a case of an iteration going back to additivity 'still one time' > 'again'.
- It is noteworthy that no clear-cut cases of additive uses are attested in the data, except for comparisons of inequality (Appendix E.4.1.5.1). However, FortescueEtAl1984 lists 'more' as a sense of Proto-Eskimo **cu(na)li*, and such an additive-incremental function is attested, for instance, with Central Alaskan Yupik *cali* (Miyaoka2012). That is, the use in (E.72) might be a reflex of an older function that has become lost/superseded by other markers.

- (E.72) Context: Whitey has been told to take a closer look at a mare and her colt. He has circled them once and not noticed anything.

E.4 Kalaallisut (*kal*, *kala1399*)

“Aju-quti-qar-nir-su-q taku-sinnaa-nngi-la-ra”

prairie were growing even larger.'⁴ (BittnerTexts)

⁴The marker (*j*)*artur* marks a continuous, stepwise increase (Fortescue1984). Also see vanGeenhoven2005, among others, for a more general discussion of such expressions.

E North America

E.5 Kekchí (kek, kekc1242)

E.5.1 *toj*

E.5.1.1 General information

- Wordhood: free morpheme.
- Etymology: its functional range suggest an spatial limitative ‘until’ as the diachronically original meaning.

E.5.1.1.1 As a **STILL** expression

- **VocabularioKechi2004**, **Kockelman2010**, (**Kockelman2010**, **Kockelman2020**) and **SamJuarezEtAl2003**.
- Specialization: **Kockelman2020** explicitly addresses the two components of my definition, showing that *toj* both involves persistence, defeasibly implies a later discontinuation and is incompatible with inalterable states.
- Polarity sensitivity: according to **Kockelman2020** *toj* does not form an part of a negative phasal polarity expression, although it can augment the NOT YET item *maaji'*, in which case it stresses the absence of change and often appears to signal the unexpectedly late scenario. There are, however, a few scattered attestations of *toj* plus negation in **Kockelman2010** (**Kockelman2010**, **Kockelman2020**) and **SamJuarezEtAl2003** that are translated as ‘todavía no’ / ‘still ... not’. All of these feature the negative existential *maak'a*'. This suggests that, this specific environment, *toj* is involved in the expression of NOT YET.
- Pragmaticity: compatible with both scenarios (tentative conclusion). Example (E.77) is a prime candidate for the unexpectedly late scenario.
- Syntax: clause-initial position, can be preceded only by conjunctions and question markers.
- Further note: cannot be used as a one-word answer (**Kockelman2020**).

- (E.75) Context: about a dog waiting at the entrance of a small restaurant.

Ma xkoo? – Maaji' na-xik, toj wan.

 (**SamJuarezEtAl2003**, glosses added)

E.5.1.3 Broadly adverbial temporal-aspectual functions

E.5.1.3.1 Near past

- **VocabularioKechi2004**, **EachusCarlson1980**, **Kockelman2020** and **SamJuarezEtAl2003**.
- In this function *toj* combines with the subordinator *naq*. This collocation is typically reduced to *toja'~tojo'~toje'* and tied to the clause-initial position. The verb in the subordinate clause stands in the perfective aspect inflection.
- This use signals an immediate past, often translated into Spanish using the *acabar de-INF* 'have just V-ed' construction. Note the clearly anterior viewpoint and past-in-the-past semantics in (E.80).
- **Kockelman2020** links this to the temporal restrictive function of *toj* (Appendix E.5.1.4.2) with an anaphoric topic time, i.e. 'it is not until now/then when ...', in a similar fashion to how *toj* as an exponent of STILL likely goes back to its 'until' function (Appendix E.5.1.4.1) plus zero anaphora 'until now/then'. This interpretation would be in line with the occasional token of *toja'* and its variants together with the imperfective present, always with an ingressive meaning (E.82)

E North America

E.5.1.3.2 Event sequencing: *toja'~/tojo'~/toje' naq*

- **VocabularioKechi2004**, **EachusCarlson1980**, **Kockelman2020** and **SamJuarezEtAl2003**.
- Form: in a clause headed by *toja'~/tojo'~/toje' naq*, where the first item is the reduced form of *toj naq* ‘still SUBORD’ that is also found in the immediate past use (Appendix E.5.1.3.1). The seemingly redundant second instance of the subordinator *naq* is likely to be facilitated by *toja'~/tojo'~/toje'* no longer being perceived as compositional, in conjunction with a structural parallelism to a preceding temporal clause introduced by *naq*, as in (E.85).
- This use occurs in sequential contexts, where it depicts an event occurring as right at (or closely after) the time established by a preceding event. Often this brings about notions of a sudden or immediate development, as in (E.84–E.86).
- As **Kockelman2020** discusses, this can be linked to the temporal restrictive function of *toj* (Appendix E.5.1.4.2) together with an anaphorically retrieved topic time, i.e. ‘(not until) then (is when)’.

E.5.1.4 Temporal connectives and frame setters

E.5.1.4.1 Temporal limitative

- VocabularioKechi2004 and Kockelman2020.
- This function obtains with imperatives (E.87), continuous and negated predicates (E.88) and, generally, contexts in which *toj* takes scope over a clause featuring other phasal polarity expressions (E.89). In all other cases featuring affirmative polarity, *toj* is understood as 'not until, when (after)'; see Appendix E.5.1.4.2. Elliptical examples like (E.90) can be read both ways, ultimately resulting in the same interpretation. A similar case holds in (E.93) below.
- Also see Appendix E.5.1.5.1 for the same 'until' reading with spatial complements.

‘(Not) until tomorrow?’
B: *Eq'ela kab'ej.*
‘Early tomorrow’ (Kockelman2020)

E.5.1.4.2 Temporal restrictive

- **VocabularioKechi2004** and **Kockelman2020**.
- This function obtains with affirmative polarity and, usually, a non-continuous viewpoint; other combinations yield limitative ‘until’ (Appendix E.5.1.4.1). In actual discourse, this often bleeds into a purely positional sense ‘when, after’.
- As **Kockelman2020** discusses, there is a noticeable overlap in usage patterns between *toj* as ‘until’ (Appendix E.5.1.4.1) plus negated predicates and the ‘not until’ function, in that both cases often involve some situation that lasts until the time denoted by the complement of *toj*, and a second situation that takes place no earlier than that. Both, the latter, and the positional ‘when’ reading can be observed in (E.93). Thus, Lord B’alamq’e’s discontentment lasts until placing the rat inside the moon and it peeing there, the latter event being the trigger for a change to the better and anaphorically referenced by *o'ka'in* ‘then, thus’. Seen this way, the readings of *toj* as limitative ‘until’ and restrictive/positional ‘not until, when’ only differ in the (inter-)clausal relationships (whether *toj* plus complement are understood as a continuation of the first sentence, or as establishing a new unit), with the temporal and causal relationships remaining stable across the two readings.

E.5.1.5 Additive and related uses

E.5.1.5.1 Spatial limitative ('until')

- **VocabularioKechi2004**, **EachusCarlson1980** and **Kockelman2020**.
- In this function, *toj* takes a phrase denoting a point or region in space, up to which a spatial trajectory extends, as its complement.
- Given the well-known extension from spatial language into the temporal domain, this function may constitute the diachronic source for all other functions of *toj*.

E.5.1.6 Broadly modal and interactional functions

E.5.1.6.1 Concessive apodoses

- Kockelman2020 (Kockelman2010, Kockelman2020).
- This use is described as being rather infrequent.
- That this is not merely a contextual inference of a STILL use becomes clear from the fact that this reading primarily obtains with perfective predicates, as in (E.96). Also note the negation within the scope of *toj* in (E.97).

- (E.96) *M-at-xik, m-at-xik x-in-ye, ab'anan toj*

 (Kockelman2020)

E.5.1.6.2 Exceptive conditionals ('unless')

- Kockelman2010 (Kockelman2010, Kockelman2020).
- As suggested by Kockelman2020, this is best be considered an extension of temporal ‘until’ (Appendix E.5.1.4.1), with a mapping from times to possible worlds: the situation described in the foregrounded clause holds true until (and defeasibly no longer after) the preventing condition is met.

- (E.98) Context: a hummingbird explaining why he does not want to give away its feathers.

E.6 Maricopa (mrc, mari1440)

Introductory remarks Maricopa has two candidates for STILL expressions: *-skiiit* and *-haay*. Only for the latter are there examples of additional functions in the data consulted.

E.6.1 -haay

E.6.1.1 General information

- Wordhood: bound morpheme (verb suffix).

E.6.1.2 As a 'still' expression

- Gordon1986.
- Specialization: examples like (E.99, E.100) give a fairly good indication that this marker conforms to my definition. For instance, (E.99) evokes an alternative scenario in which J.P. is no longer small and can therefore take care of himself.
- Polarity sensitivity: inner negation yields NOT YET, outer negation yields NO LONGER.
- Pragmaticity: the data allow for no conclusions.

(E.99) *J.P.-sh nnooq-haay-m aany-m wi-m ntay-sh*
J.P.-SUBJ small-still-DS DEM-ASSOC do-RL mother-SUBJ

something-ASSOC work.PL-RL
'While I was still asleep, my brothers were working.' (Gordon1986)

E North America

E.6.1.3 Broadly adverbial temporal-aspectual functions

E.6.1.3.1 Near past

- **Gordon1986.**
 - This is often accompanied by a form of *mpis* ‘now’ in the clause’ in the clause, as in (E.101). However, this is by no means compulsory, as shown in (E.102).
 - Of the two examples in **Gordon1986**, one features a Vendlerian accomplishment plus the perfective aspect (E.101). In Maricopa, verbs other than Vendlerian achievements (and, possibly, semelfactives) distinguish between a perfective and imperfective paradigm in the realis mood. With Achievements, such as in the other relevant example (E.102), the realis mood alone signals a bounded viewpoint (cf. **Gordon1986**).
 - For the Quechuan cognate *-xay* **Halpern1946** lists “no sooner than” as one of its meanings. This likely refers to the same function.

- (E.101) 'ayuu '-maa-haay-ksh.
 something 1-eat-still-PFV.1
 'I just ate.' (Gordon1986)

- (E.102) *Mpis-han puu-haay-ksh.*
 now-RL die-still-RL
 ‘He just now died.’ (Gordon1986)

E.6.1.4 Temporal connectives and frame setters

E.6.1.4.1 Simultaneous duration

- Gordon 1986.
 - Form: only in collocation with inessive *-ly*.
 - Negation of the predicate transparently yields precedence ('while not yet *p*, *q*)
> 'before *p*, *q*')

- (E.104) *Nyaa ny-yuu-k ’-uvaahaaay-ly m-kwnyminy-k.*

 2-sit-ss 2-LOC.COP-still-in DEM DEM.ASSOC-IMP-work-RL
 'While you are sitting there, work on this.' (Gordon1986)

E.7 *Osage (osa, osag1243)*E.7.1 *šó*

E.7.1.1 General information

- Wordhood: independent grammatical word, but can take suffixes.
- Syntax: invariably following the predicate and preceding the positional/continuative auxiliaries. The only other two markers occurring in the same slot of the verbal template are habitual *nq* and frequentative *štq*.

E.7.1.2 As a ‘still’ expression

- Quintero1997 (Quintero1997, Quintero2004, QuinteroDictionary).
- Specialization: inclusion of this marker is more tentative than that of most expressions in my sample. It is based on examples like (E.106–E.108), where (E.106) appears to suggest a possible discontinuation scenario.
- Polarity sensitivity: not attested in combination with negation.
- Pragmaticity: the data allow for no conclusions; example (E.106) might be taken as involving an unexpectedly late continuation.

(E.106) *đijihó kše wažáže íe wakóze šó đjkše?*

 ‘Your teeth are still good.’ (QuinteroDictionary, glosses added)

E.7.1.3 Broadly adverbial temporal-aspectual functions

E.7.1.3.1 Always, forever, the entire time: *š(ó)óšówe, š(ó)óðšéðe*

- Quintero1997 (Quintero1997, Quintero2004, QuinteroDictionary).
- Form, syntax: in reduplicated forms *šóóšówe~šóóšówe, šóóðéðe~šóóðéðe*, all of which are based on *šó-ðe* ‘still-PROX’ (see Appendix E.7.1.4.1 on the latter). This composition can be taken as an indication that this use is derived from the marking of simultaneous duration (Appendix E.7.1.4.1) via ‘during that time’ >

E North America

‘during all times’, which is in line with the semantics of reduplication in Osage (cf. [Quintero2004](#)). What is more, other than *šó* as STILL expression the items in question can precede the VP, as in (E.109, E.110), thereby occupying the same position as a temporal clause.

- (E.109) *Šópóšwe naniópa ðaašoé hta apa-i.*
 always pipe 3SG.A.smoke FUT 3CONT-DECL
 ‘He will always smoke.’ ([Quintero2004](#))
- (E.110) *Šóðéðe brée hta mjksé*

hkó-bra.
 1SG.A:PVB-want
 ‘I want this Osage language to go on forever [against all odds].’
 ([QuinteroDictionary](#), glosses added)

E.7.1.4 Temporal connectives and frame setters

E.7.1.4.1 Simultaneous duration

- [Quintero1997](#) ([Quintero1997](#), [Quintero2004](#), [QuinteroDictionary](#)).
- This function can occur together with an overt subordinator that occupies the corresponding clause-final position, as in (E.114). However, judging from the examples throughout [Quintero1997](#) ([Quintero1997](#), [Quintero2004](#)), this is not particularly common; instead, *šó* is usually the only exponent of the clause’s subordinate status.
- Form: there are variants *šóde*~*šówe*~*šóe* < *šó-ðe* ‘still-PROX’; this is shown in (E.113). It is not clear what differentiates this forms from plain *šó* as ‘while’.
- Assuming that STILL (or a closely related notion) is the prior function of *šó*, cases like (E.115) might constitute a bridging context.

 (QuinteroDictionary, glosses added)

E.8 Slave (den, slav1253)

E.8.1 k'ála

E.8.1.1 General information

- Form: there is a free variant *k'ahla*.
- Wordhood: independent grammatical word, invariable.
- Syntax: either in clause-initial position (but following question markers) or preceding the verbal predicate.

E.8.1.2 As a 'still' expression

- SlaveyTopicalDictionary and Rice1978 (Rice1978, Rice1989).
- Specialization: examples like (E.116–E.119) give a good indication that this marker conforms to my definition. For instance, in (E.116) the husband's absence is construed as persistent, while at the same time evoking an alternative scenario in which he has returned (i.e. NO LONGER is absent), and which would have led to a different course of action.
- Pragmaticity: appears to be compatible with both scenarios. Examples like (E.119) suggest that the unexpectedly late scenario can be made explicit by expressions of the 'even now' type.
- Polarity sensitivity: inner negation yields NOT YET.

E North America

E.8.1.3 Uses related to other phasal polarity concepts

E.8.1.3.1 Interrogative 'yet'

- Rice1978.
- This function is attested in indirect (E.120) and direct (E.121, E.122) questions.
- If not constituting relic (an earlier 'up to now' meaning), it is conceivable that this phenomenon was mediated by cases like (E.123). Here *k'ála* is separated linearly from the negative marker, potentially leading to scope ambiguity (it being parsed either as part of the complement clause or as a pre-posed part of the higher clause).
- I assume that *k'ála* as 'ever' in (E.124) can be subsumed here, as well ('as of yet, do you tend to go to Yellowknife/have you gone to Yellowknife?').

E.9 Western Shoshoni (shh, west2622)

E.9 Western Shoshoni (shh, west2622)

Introductory remarks I am indebted to John McLaughlin for helping tease apart examples from CrumDayley1993 and for discussing cognates off *ekisen* across Central Numic with me.

E.9.1 *ekisen*

E.9.1.1 General information

- Form: CrumDayley1993 have three forms that appear to be in free variation: *ekise*~*ekisen*~*ekisem*. McLaughlin2012 transcribes this marker as *ikisin*.
- Wordhood: independent grammatical word, invariable.
- Syntax: in all examples, *ekisen* precedes the predicate, typically following the subject.
- Etymology: < *eki* 'now' plus a suffix *-seN*. Cognates of this marker are found across Numic languages, and are often described as adverbial, emphatic, intensifying, etc; the item's functional range suggests it is best considered a non-scalar restrictive 'just'.

E North America

E.9.1.2 As a ‘still’ expression

- CrumDayley1993 and McLaughlin2012.
- Specialization: exx. (E.125–E.127) give evidence that this marker has specialized as a STILL expression. For instance, in (E.125) *ekise* not only signals the continuation of a mythical scenario in which animals behaved like people, but also evokes a contrast this with the opposite situation at the time of speech.
- Pragmaticity: the available data allow for no conclusion.
- Polarity sensitivity: not attested in combination with negation. NOT YET is expressed via another expression, *kaisen*.

(E.125) Context: the opening of a tale.

Himpaise ekise utihi newe niwene-ku, Itsappe ma'ai Po'naih
long_ago still DEM.DU.ACC person speak.PL-DS coyote and mouse
nawaka nanaahka.
with_each_other lived

‘A long time ago, when animals [still] talked ... Coyote and Mouse lived together.’ (CrumDayley1993)

(E.126) Context: from a text about harvesting pine nuts.

September ma sutee ekisem pukaite. October-ha eke

‘When Charley was still alive, he planted many aspen trees.’
(CrumDayley1993; glosses by McLaughlin2012)

E.9.1.3 Broadly adverbial temporal-aspectual functions

E.9.1.3.1 Near future

- CrumDayley1993 and McLaughlin2012.

E.9 Western Shoshoni (*shh*, west2622)

- This function obtains in combination with the future tense.
- The source for this use lies in the original composition of *eki-sen*, namely ‘now-RESTRICTIVE’, i.e. ‘right now’. This interpretation is supported by the fact that in closely related Panamint (par, pana1305) *üküsü* has this near future function and serves as an emphatic version of *ükü* ‘now’, does not serve as a STILL expression (cf. Dayley1989Dictionary, Dayley1989Grammar).

(E.128) *Sote ekisen pite-pite-to’i.*
DEM.SG still arrive-finish-FUT
'She is arriving soon.'
(CrumDayley1993; glosses by McLaughlin2012)

fringes of STILL

Appendix F: Papunesia

F.1 Acehnese (ace, achi1257)

F.1.1 mantöng

F.1.1.1 General information

- Wordhood: independent grammatical word, invariable.
- Form: also transcribed as *mantong* and *mantòng*.

F.1.1.2 As a ‘still’ expression

- DaudDurie1985, DjajadiningratVol2, Durie1985, and Kreemer1931; additional discussion in vanBaar1991 (vanBaar1991, vanBaar1997).
- Specialization: the entries/translations in the literature, as well as examples like (F.1–F.3), give evidence that *mantöng* meets my definition. Note for instance the prototypical contrast between two phases in (F.1). Further, albeit indirect, evidence for the specialization of this marker comes from the robustly attested restrictive–still polysemy (Section 3.4.2).
- Pragmaticity: seems to be compatible with both scenarios. Ex. (F.2) is a prime candidate for the unexpectedly late scenario.
- Polarity sensitivity: no examples featuring negation in the data. There are several distinct NOT YET expressions and NO LONGER is expressed via NEG *lē* ‘more’.
- Syntax: in phasal polarity function, *mantöng* can either precede or follow the predicate.
- Further note: *mantöng* can serve as an (elliptical) pro-sentence, see (F.3).

(F.1) *Dilèë mantöng lè-lò, djinòë ka teutab akaj.*
earlier still restless now already stationary reason

strong

‘Wat een lang leven heeft die man, hij is al honderd jaar en is nog krachtig. [What a long life that man has, he is a hundred years old already and he is still strong]’ (DjajadiningratVol1, glosses added)

(F.3) *Mantōng teukoe di kantō jōh dròë=neu wòë boenòë?*

still T. at office when self=2 return earlier_today

Mantōng.

still

‘Was de teukoe nog op het kantoor, toen u zooeven naar huis ging?

– (ja hij was er) nog.’ [Was the Teukoe still in his office when you

just left? – (Yes he) still (was)] (DjajadiningratVol2, glosses added)

F.1.1.3 Uses on the fringes of ‘still’

F.1.1.3.1 Scalar contexts

- *Mantōng* is attested in scalar contexts involving a decrease over time.
- That this use relates to **STILL** (rather than to the exclusive function) becomes visible in (F.5), where *mantōng* precedes the predicate.

(F.4) *Le that ceuneurōh mantōng*

many very frying still

‘There is still a large quantity of things to be fried.’ (Asyik1987)

(F.5) *Hana lön-bloe saka sabab mantōng le di rumoh*

NEG 1SG-buy sugar because still many in house

‘I am not buying any sugar because there is still much at home.’

(Asyik1987)

F.1.1.4 Restrictive (non-temporal)

F.1.1.4.1 (Non-scalar) exclusive

- Durie1985, DjajadiningratVol2, Kreemer1931 and Hurgronje1900; additional discussion in vanBaar1991 (vanBaar1991, vanBaar1997).
- As is typical of exclusive marker, this is best considered a cluster of functions. These include restricting the reference of a nominal or noun phrase to a single entity (F.6, F.7) and yielding ‘alone’ in combination with *droe* ‘self’ (F.8).

- vanBaar1991, based on the two relevant tokens in Durie1985, tentatively suggests that the restrictive function only occurs with associates lower than the main predicate, hence the pseudo-cleft construction in (F.6). This is contradicted by examples like (F.9, F.10), where restrictive *mantöng* associates with the predicate.
- Syntax: *mantöng* always follows the focus.

(F.6) *Lôn mantöng nyang=sakêt.*

found it, received it as a gift)] (DjajadiningratVol2, glosses added)

F Papunesia

F.2 Blagar (beu, blag1240)

F.2.1 yedung

F.2.1.1 General information

- Form: also transcribed as (*j*)*edung*, *eduŋ*. Presence vs. absence of the initial segment is a matter of dialect variation.
- Wordhood: independent grammatical word, invariable.
- Syntax: fixed, but dependent on polarity. Preceding the predicate as STILL, following it as NOT YET.

F.2.1.2 As a ‘still’ expression

- Steinhauer1995 (Steinhauer1995, SteinhauerBukalabang) and SteinhauerGomang2016.
- Specialization: examples like (F.11–F.13) give a good indication for the specialization of this marker. Further, albeit indirect, evidence comes from its function as NOT YET (Appendix F.2.1.3.1).
- Pragmaticity: the available data allow for no conclusion.
- Polarity sensitivity: not attested with negation; NOT YET is expressed via *yedung* in post-predicate position (Appendix F.2.1.3.1). In the related neighbouring language Teiwa *yed*, which appears to share the same pattern, the relevant marker is in complementary distribution with the standard negator, but does combine with the prohibitive and inherently negative verbs (judging from examples throughout Klamer2010), i.e. a highly restricted form of inner negation.
- Syntax: precedes the predicate.

- (F.11) *Lokoe lahatala jedung ping veng ani.*
 INTERJ God still OBJ.1PL.INCL about remember
 ‘Thank God, God still remembers us (idiom, said when God’s flag, the rainbow appears).’ (SteinhauerGomang2016, glosses added)

 ‘Those who just now still had their kenari nuts, they play.’
 (SteinhauerBukalabang)

F.3 *Bukiyip (ape, buki1249)*

F.2.1.3 Uses related to other phasal polarity concepts

F.2.1.3.1 Not yet

- Steinhauer1995 (Steinhauer1995, SteinhauerBlagar, SteinhauerBukalabang) and SteinhauerGomang2016.
- This function is attested in two contexts:
 - As a negative reply to a polar question; this is shown in (F.14).
 - When occupying the post-predicate position, as in (F.15, F.16). The same complementary distribution is found in two of the three neighbouring Alor-Pantar languages: with Nedebang *yadda* (Schapper2014Nedebang) and Teiwa *yed*; the latter can also embrace the predicate (judging from the examples throughout Klamer2010). This pattern is closely related to the fact that the post-predicate position is the locus for clausal negation (see SteinhauerBlagar; Klamer2010; Schapper2014Nedebang). In Blagar's third neighbour Reta, *doo* also serves as STILL in the pre-predicate position. NOT YET is expressed via embracing negation, involving a clause-initial negator and *doo* in post-predicate position. The clause-initial negator is, however, often dropped (Willemse2020). In diachronic terms, this most likely constitutes an intermediate stage.
- (y)*edung* as NOT YET also combines with additive =*di*, yielding 'not ever' (F.17).

(F.14) *Ana na nat ʔila? – Jeduj.*

(F.17) *Qana pura por tang hoqa=di jedung.*

SUBJ.3SG P. land on come=also still

'He has never yet come to Pura.' (SteinhauerGomang2016, glosses added)

F.3 *Bukiyip (ape, buki1249)*

Introductory remarks Bukiyip has an extensive gender/noun class system that is indexed on various parts of speech. In the examples, I gloss the corresponding

F Papunesia

markers as NCL 'noun class' plus Arabic numeral, following the numbering employed in ConradWigoga1991.

F.3.1 wotak

F.3.1.1 General information

- Form: Conrad1998 and ConradWigoga1991 have *wotak*, Gerstner1963 has *wota(g)*.
 - Wordhood: independent grammatical word, invariable.
 - Syntax: fixed position, following the subject NP and preceding the predicate.

F.3.1.2 As a ‘still’ expression

- ConradWigoga1991 and Gerstner1963.
 - Specialization: evident in examples like (F.18–F.20). For instance, in (F.18) *wotak* construes the background situation as one in which Joseph and Mary continue to be in Bethlehem and also evokes a perspective towards their future return to Nazareth. Additional, albeit indirect evidence comes from its use as NOT YET without negation (Appendix F.3.1.3.1).
 - Pragmaticity: appears to be compatible with both scenarios.
 - Polarity sensitivity: inner negation yields NOT YET. Outer negation via *kob(w)i* ‘NEG.IRR’ yields NO LONGER.

- (F.18) Context: Luke 2:6. Joseph and Mary have travelled from their home in Nazareth to Bethlehem for a census. They were not planning to stay there.

- (F.19) Context: people have worked away for several years and want to return to the village.

¹Conrad 1998 glosses *p(w)e* as 'remain' here, but mostly as 'be' elsewhere. Conrad Wigoga 1991 and the examples throughout their grammar show that this verb is in fact a locative and existential copula.

F.3 *Bukiyip* (ape, buki1249)

 'And we haven't made peace yet – the trouble is still with us.'
 (ConradWigoga1991)

F.3.1.3 Uses related to other phasal polarity concepts

F.3.1.3.1 Not yet

- Conrad1998 and ConradWigoga1991.
 - This function is attested in the absence of an overt predicate. More specifically,
 - In disjunctive questions following a pattern ‘*p* or still > *p* or not yet’ (F.21). These can be understood as instantiating a more general pattern of question formation ‘*p* or NEG’ (see ConradWigoga1991).
 - As a negative one-word reply to a polar question (F.22).
 - As a pro-sentence, adding to a negative proposition (F.23).
 - There are two other attestations of *wotak* in ConradWigoga1991’s (ConradWigoga1991) grammar that are translated as ‘not yet’, but where the negative appears to be an artefact of translation. The first case is (F.19) above. The second case, involves *anapu wotak malhwasia*, translated as ‘some of us still hadn’t come’ (ConradWigoga1991). Composition and context both suggest that this is literally ‘some of us were still running hither’.

- (F.21) *Núgawikw yopu-kw o wotak?*

F.4 Chamorro (cha, cham1213)

F.4 Chamorro (cha, cham1213)

Introductory remarks Chamorro has two candidates for **STILL** expressions: *trabiha* and *ha'*. Only for the latter there are indications for additional functions. Note that I gloss what **Chung2020** terms the “progressive” aspect form as **CONT** for ‘continuative’, as it is compatible with stative predicates.

F.4.1 ha'

F.4.1.1 General information

- Wordhood: bound morpheme, enclitic (but separated from its host in spelling).
 - Syntax: follows (i.e. hosted by) its focus.

F.4.1.2 As a ‘still’ expression

- **Chung2020.**
 - Specialization: in absence of contextualized data, examples like (F.27–F.29) give a fairly good indication that this marker conforms to my definition. For instance, (F.27) appears to not only evoke the continuation of speakers' being alive, but also contrast it with others who are deceased. Further, albeit indirect, evidence comes from the robustly attested restrictive-STILL polysemy and the semantic parallels between these functions (see Section 3.4.2).
 - Polarity sensitivity: in the data, there is only one example of *ha'* as STILL in combination with negation, yielding NOT YET (Chung2020). NOT YET seems to be more commonly expressed via the inner negation of *trabiha*.
 - Pragmaticity: the data allow for no conclusions.

(F.27) *Hita ni manlåla'la' ha' para ta abiba.*

F.5 Coastal Marind (mrz, hali1245)

F.5.1 Introductory remarks

Apart from descriptive materials, I also consulted the text collections by Olsson2021a (Olsson2021a, Olsson2021b). My understanding of the data has furthermore greatly profited from discussions with Bruno Olsson, who also helped with several glosses.

Note that Roman numerals in the glosses indicate gender, following the conventions in Olsson2017. In addition, Coastal Marind has a complex system of verb orientation marking. In broad strokes, this is a focus/actor marking system reminiscent of the Austronesian type (see Olsson2017). Lastly, several examples feature the “contessive” prefix *ap-*. This is a marker that is common with posture and motion verbs, often “expresses[ing] placement or movement on a surface off the ground” (Olsson2017). It is, however, also lexicalized with other verbs, and its exact contribution is often hard to pin down; see Olsson2017.

F.5.2 *ndom*

F.5.2.1 General information

- Wordhood: free morpheme.
- Syntax: invariably in pre-verbal position.
- Further note: *ndom* requires the “neutral” orientation of the verb. Since this can be considered the unmarked case, I do not indicate it in the glosses.
- Etymology: there is a homophonous adjective *ndom* ‘bad’, but it is unclear whether this is a chance resemblance or not.

F.5.2.2 As a ‘still’ expression

- Olsson2017.
- Specialization: that *ndom* conforms to my definition is evident in examples like (F.40–F.42). For instance, in (F.40), the women continue to be busy fishing, which is contrasted with the discontinuation of that activity at the boy’s next visit.

F.5 Coastal Marind (mrz, hali1245)

- Pragmaticity: seems compatible with both scenarios. Ex. (F.42) features the unexpectedly late scenario.
- Polarity sensitivity: there are no attestations of *ndom* with negation. This is in line with Olsson2017's (Olsson2017) observation that there are no expressions for any other phasal polarity concepts.

- (F.40) Context: A boy in disguise has gone to look at women who are fishing.

F.5.2.4 Additive and related uses

F.5.2.4.1 Additive

- Olsson2017.
- This use predominantly occurs in motion contexts (going along or bringing along), where it bleeds into the comitative domain (F.45, F.46). Note that in these uses, *ndom* is a common one-word answer (F.46).
- Other than suggested by Olsson2017, additive *ndom* is not completely restricted to motion contexts; this is shown in (F.47).

 (Olsson2015, glosses added)

F.5.2.4.2 The collocation *inah ndom*

- There are five attestations of a collocation *inah ndom* 'still two' in Olsson2015's (Olsson2015) corpus that cannot be explained by the phasal polarity or additive functions. Two of these are given in (F.48, F.49).
- The contribution of this collocation is not entirely clear. Three of the attestations, including (F.48), involve information given in an afterthought-like manner.
- Bruno Olsson (p.c.) suggests a conceptual link to additive uses as in (F.45, F.46) above. Under this interpretation, in (F.48) the speaker adds *inah ndom* to stress '[in fact], two of them [not just one]'. Similarly, the addition of *Iwoni ndom* in (F.45) emphasizes '[not just them, in fact], Iwoni also [went]'.

- (F.48) Context: preparing gifts for the children's teachers.

F.6 Iatmul (ian, iatm1242)

Introductory remarks Apart from descriptive materials, I consulted Jandraschek2008's (Jandraschek2008) text collection. My understanding of the data was furthermore greatly aided by discussions with Gerd Jandraschek, who also helped with glosses.

F.6.1 *wata*

F.6.1.1 General information

- Wordhood: independent grammatical word, invariable.
- Syntax: invariably precedes the predicate.

F.6.1.2 As a 'still' expression

- Jandraschek2007 (Jandraschek2007; Jandraschek2012).
- Specialization: textual examples give evidence that *wata* conforms to my definition. For instance, in (F.52) the first instance of *wata* serves to frame the situational background as a continuation of the ongoing fight. At the same time, it anticipates the soon-to-occur end of the battle. Likewise, the second token in (F.52) can be interpreted as evoking an (expectable) alternative scenario in which the grandfather took notice of the ongoing battle and stopped working. Further, albeit indirect, evidence comes from its uses as NOT YET in the absence of negation (Appendix F.6.1.3.1).
- Pragmaticity: appears to be compatible with both scenarios.
- Polarity sensitivity: inner negation yields NOT YET.

- (F.50) Context: recollecting the arrival of the German colonizers. The Iatmul tried to fight them off with spears.

Wata yi-li'-di yi-ka li'-ka yi-ka agiyabak

 'The food is still hot.' (Jandraschek2012)

F.6.1.3 Uses related to other phasal polarity concepts

F.6.1.3.1 Not yet

- Jandraschek2007 (Jandraschek2007; Jandraschek2012).
- In this function *wata* serves as a pro-sentence or interjection.
- This use covers a broad spectrum of nuances: 'not yet', 'wait one moment', 'it doesn't end here', etc. (Jandraschek2012; Gerd Jandraschek, p.c.)

- (F.53) **Wata!**

F Papunesia

F.7 Kalamang (kgv, kara1499)

Introductory remarks Apart from descriptive materials, I consulted Visser2021b's (Visser2021b) corpus. My understanding of the data has furthermore greatly profited from discussion with Eline Visser, who also helped with some tricky glosses.

F.7.1 tok

F.7.1.1 General information

- Wordhood: free morpheme.
- Syntax: fixed position, following the subject NP, preceding object NPs and the predicate. There are a few instances in Visser2021b's (Visser2021b) corpus in which *tok* embraces the subject, as in (F.56) below. In all likelihood, these are false starts (Eline Visser, p.c.).

F.7.1.2 As a 'still' expression

- Visser2020 (Visser2020; VisserKalamangDictionary).
- Specialization: examples like (F.56–F.58) clearly identify *tok* as a STILL expression. For instance, in (F.56) the logging company not only continued to exist at topic time but this state is also contrasted with its discontinuation at the time of speech. Further, albeit indirect evidence comes from *tok*'s use as NOT YET without a negator (Appendix F.7.1.4.1).
- Pragmaticity: appears to be compatible with both scenarios. The vast majority of tokens in Visser2021a (Visser2021a, Visser2021b) belong to the neutral scenario. If (and which) additional marking is used to make the unexpectedly late scenario explicit is an open question.
- Polarity sensitivity: inner negation yields NOT YET.
- Further notes: a token like (F.59) might also be considered an instance of the 'first, for now' use (Appendix F.7.1.5.1). *Tok* can serve as an elliptical pro-sentence; see (F.60).

- (F.56) Context: the narrator and his friends have speared a fish. There used to be a logging company (now defunct) in the village.

Kan waktu ma me <tok-> perusahaan tok metko mambon. Mu sor
INTERJ time 3SG TOP still company still there exist 3PL fish

 'Do you still go to school? — Yes [I still go to school].'
 (Visser2020)

F.7.1.3 Uses on the fringes of 'still'

F.7.1.3.1 Scalar contexts

- Several tokens in the data, including (F.61, F.62) involve scalar contexts, more precisely monotone decreases.
- Note that (F.61) involves *kodak* 'just one' < *kon-tak* 'one-just' and in (F.62) what is left of the giant is marked by the focus clitic =*a*. That is, in both cases the remaining value clearly constitutes the sentence focus.

F Papunesia

- (F.61) Context: several pouches of tobacco have been smoked.

(Visser2021b, glosses added)

F.7.1.4 Uses related to other phasal polarity concepts

F.7.1.4.1 Not yet

- Visser2020 (Visser2020, VisserKalamangDictionary).
- This function occurs in the absence of an overt predicate, namely
 - In polar questions following a pattern ‘already *p* or still > already *p* or not yet’, as in (F.63). This can be understood as a specific instantiation of a broader pattern of question formation ‘*p* or NEG’ (see Visser2020)
 - In replies to questions and statements featuring *se/he* ‘already’, where *tok* is the only possible negative answer. This is illustrated in (F.64, F.65). Note that if the question contains *tok* as STILL, *tok* as a one-word answer is also interpreted as STILL; see (F.59) above.
 - As holophrase. In these cases, *tok* is often reduplicated; see (F.66).
 - In contexts involving contrastive sets; this is illustrated in (F.67). In this use, *tok* is also often reduplicated, as in the second instance in (F.67).

- (F.63) *Se koluk ye tok?*

already find or still

‘Did you find it yet or not?’ (Visser2021b)

- (F.64) *Ka he namgon? – Tok.*

2SG already married(F) still

 REDUPL~still still 1PL.INCL still tear=IRR
 ‘Not yet, we’re still ripping (the pandanus leaves, to prepare the
 material with which we will weave the basket).’ (Visser2021b)

- (F.67) Context: people are taking turns in repairing a roof.

Ma he gerket “naman=a tok?” An tok~tok an=a ming
 3SG already ask who=FOC still 1SG still~REDUPL 1SG=FOC oil
yuonin=in.
 rub=NEG
 ‘He asked “Who hasn’t yet [taken their turn]?” I hadn’t yet, I didn’t
 rub oil.’ (Visser2021b, glosses added)

F.7.1.5 Broadly adverbial temporal-aspectual functions

F.7.1.5.1 First, for now

- Visser2020 (Visser2020, VisserKalamangDictionary).
- In some instances of this function, *tok* combines with other expressions for ‘first’. For instance in (F.70) it is followed by a verb ‘be first, be in front’, and in (F.71) it is preceded by the adverb *perama* ‘first’ (a loan from Malay).

- (F.68) Context: Nyong’s mother has gone landwards.

 'Long beans are even big (compared to the sinkers).' (i.e. even long
 beans still qualify as big when compared to these sinkers)
 (Visser2021b, glosses added)

F.8 Kewa (*kjs/kew, east2516/west2599*)

F.7.1.7 Broadly modal and interactional uses

F.7.1.7.1 Polite commands

- In directive speech acts, *tok* can serve as a hedge (Eline Visser, p.c.), which clearly goes back to its ‘first, for now’ use (Appendix F.7.1.5.1).

- (F.74) *Ma he min ma he mat nawarar ka tok*
 3SG already sleep 3SG already 3SG.OBJ wake_up 3SG still
parar=te.
get_up=NON.FIN
 ‘He slept, [I] woke him up, “You get up! (before you do anything else)”’ (Visser2021a; Eline Visser, p.c.)

F.8 Kewa (*kjs/kew, east2516/west2599*)

Introductory remarks The data encompass East Kewa (*kjs, east2516*) and West Kewa (*kew, west2599*). According to Franklin1968 these are mutually intelligible varieties of one language.

F.8.1 *pa*

F.8.1.1 General information

- Wordhood: unclear. Either a free morpheme or a proclitic.
- Syntax: the data suggest that *pa* precedes the associated constituent.
- Etymology: Kewa also has two verbs *pa* ‘go’, ‘do’ as well as a “completive” aspect marker *pa*, and a disjunctive coordinator *pa* ‘or’. From the available data, it is not clear if i) they are true homophones and ii) they are related to each other.

F.8.1.2 As a ‘still’ expression

- Specialization: *pa* is primarily a restrictive marker (Appendix F.8.1.3.1). Its use as a STILL expression is not explicitly discussed in the literature, although examples with the translation ‘still’ abound. I haven taken cases like (F.75–F.77) as evidence that the phasal polarity concept is among the denotata of *pa*. For instance, in (F.75), the continuation of Kodopea being alive is contrasted with the death (hence, alternative scenario) of other relatives of the speaker. Further, albeit indirect, evidence comes from the cross-linguistically robust restrictive–STILL polysemy and the clear semantic parallels between the two functions (see Section 3.4.2).

F Papunesia

- Pragmaticity: the available data does not allow any definite conclusions. (F.76) suggests that the unexpectedly late scenario can be made explicit by additional material such as *abi pege* ‘even now’.
- Polarity sensitivity: no negated examples of phasal polarity *pa* as still in the data.

- (F.75) Context: about clan history.

Paga Waimi-lopo-re koma-pe. Kodopea-re pa pi-a. Ee,
P. W.-DU-TOP die-IMM.PST:3DU K.-TOP still sit-PRS:3SG Yes,

- (F.77) *Go naaki-ri adu pa na la-aya*

DEM boy-TOP breast still eat stand-PRS:3SG
'That boy is still breast-fed (lit. still eats breast).' (Franklin2007, glosses added)²

F.8.1.3 Restrictive (non-temporal)

F.8.1.3.1 (Non-scalar) exclusive

- Franklin1971 (Franklin1971, Franklin2007) and Yarapea2006.
- This is an umbrella term for a range of conceptually related functions, in all of which *pa*'s focus is the main predicate of the clause. These functions include narrowing down the reference of the predicate ('do nothing but'), as in (F.78, F.79), depicting an act as effortless (F.80), or doing something without reason (F.81). With many attestations, the exact contribution of *pa* is hard to determine.

- (F.78) *Pa pиру aa-lua koe le sa pi*

still stay stand.DUR-FUT:1SG bad thing put sit.PRS:1SG

'(If) I don't say something (lit: just stay) I have put something valueless.' (Yarapea2006)

²Kewa "continuative" aspect describes intermittently recurrent situations; see Yarapea2006.

 'When it takes a sweet potato which is a big one and eats it (without
 much effort), it really becomes a big one.' (Yarapea2006)
- (F.81) *Nipú kíri pa-rupa ta*
 he laugh still-like PROG:3SG
 'He is just laughing (without reason).' (Franklin1971)

F.9 Komnzo (tci, wara1294)

Introductory remarks Apart from descriptive materials, I searched Doehler2020's (Doehler2020) corpus. In addition, my understanding of the data has greatly profited from discussion with Christian Döhler. Note that the STILL expression in this language is identical to the term used to refer to the language itself. This is due to the latter being shortened from *komnzo zokwasi* 'just speech' (Doehler2018).

F.9.1 komnzo

F.9.1.1 General information

- Form: there is also a reduced, enclitic form =nzo (Doehler2018). Only one attestation of this enclitic form translates as 'still' in the Komnzo text corpus (Doehler2020). I therefore do not treat it as a separate STILL expression.
- Wordhood: independent grammatical word.
- Syntax: relatively mobile, but typically in preverbal position.

F.9.1.2 As a 'still' expression

- Doehler2018.
- Specialization: *komnzo* is primarily a multi-faceted restrictive marker. Evidence for the phasal polarity concept of STILL as one of its denotata comes from examples like (F.82–F.84). The signalling of persistence in unison with the evocation of an alternative scenario becomes particularly clear in cases like (F.82,

F Papunesia

F.83). Additional, indirect evidence comes from the robustly attested restrictive–STILL polysemy (Section 3.4.2) and the semantic parallels between the two functions.

- Pragmaticity: judging from the Komnzo text corpus (Doehler2020), *komnzo* is compatible with both scenarios.
- Polarity sensitivity: no attestations with scope over a negator.

(F.82) *Fi z zebnaf o komnzo y-rugr?*
 3.ABS already 3SG:wake_up or still 3SG.M-sleep

 3SG.F:NON.PST:IPFV:be story place EMPH
 'There were the girls staying in Ote. It is still there now. Another place with another story of its own.' (Doehler2020)

F.9.1.3 Uses on the fringes of 'still'

F.9.1.3.1 Scalar contexts

- Some examples in the corpus can be read involving as STILL plus scalar contexts.
- While cases like (F.85) are relatively clear and involve a decrease over time, others are harder to judge. Thus, (F.86) could also be read as *komnzo* contributing contrastive focus ('there are plenty all right').

(F.85) Context: a girl has been attacked and eaten by a crocodile.
Ebar=nzo komnzo zwarärm fäsi=nzo

 there are still plenty”” (Doehler2018)³

F.9.1.4 Restrictive (non-temporal)

F.9.1.4.1 (Non-scalar) exclusive

• Doehler2018.

- As is common with such markers, this is a cluster of uses or functions, with the associated constituent being the predicate. For lower constituents a reduced and enclitic form =*nzo* is used (see Doehler2018). The common denominator is the exclusion of (mostly implicit) alternatives; see (F.87–F.90).
- The restrictive use is by far the most frequent use in the text corpus.

- (F.87) Context: headhunters are raiding a village. A woman is hiding.
Watik, zan wogan-é komnzo zfnagwrnθ.
 then fight man-ERG:NON.SG still 2|PL>3SG.F:PST:DUR:miss
 ‘The headhunters just passed by without taking notice.’

Just like this! Dead silent. Just like this! Dead silent.' (Doehler2020)

F.10 Lewotobi (lwt, lewo1244)

F.10.1 *morə̄*

F.10.1.1 General information

- Wordhood: independent grammatical word, invariable.
- Syntax: fixed position, following the predicate (and negation).
- Etymology: unknown; in closely related Lamaholot, the cognate *muri'* is an additive and iterative marker (NishiyamaKelen2007; Pampus2010).

F.10.1.2 As a 'still' expression

- Nagaya2012.
- Specialization: in absence of textual attestations, examples like (F.91–F.93) give a reasonably solid indication that this marker confines my definition. For instance, in (F.91) *morə̄* not only signals that the speaker continues to be a student, but also hints at the future discontinuation, which is when the question about marital status will become relevant. In (F.92), to all appearances, the addressee's persistent presence is in contrast to the speaker's expectation of the opposite. Note that *morə̄* only serves as STILL with atelic predicates, whereas the combination with telic predicates yields NOT YET (Appendix F.10.1.3.1).
- Pragmaticity: appears to be compatible with both scenarios (tentative conclusion). Ex. (F.92) is a prime candidate for the unexpectedly late scenario.
- Polarity sensitivity: *morə̄* itself serves as NOT YET with telic predicates. There are also a few examples of *morə̄* with scope over negation in Nagaya2012's (Nagaya2012) grammar.

- (F.91) Context: used as an answer to an inquiry about marital status.
Students are not supposed to marry yet.

Go mahasiswa morə̑ di.

1SG student still DM:excuse

‘I am still a student (so I am not married).’ (Nagaya2012)

(F.92) *Ona=e mo pi morə̑ ta?*

‘Wow, hey, are you still here!?’ (Nagaya2012)

(F.93) *Neku go səga pi, ra krȋ̑ morə̑.*

ago 1SG arrive PROX 3PL work still

‘When I arrived here a while ago, they were still working.’

(Nagaya2012)

F.10.1.3 Uses related to other phasal polarity concepts

F.10.1.3.1 Not yet

- Nagaya2012.
- This function occurs with telic predicates (F.94, F.95), as opposed to atelic ones, with which *morə̑* serves as STILL. With predicates that allow for both a telic and an atelic construal, this results in ambiguity (F.96, F.97).

(F.94) *Ale həkə oto morə̑.*

A. stop car still

‘Ale hasn’t stopped the car yet.’ (Nagaya2012)

(F.95) *Go krȋ̑ waha morə̑.*

(F.96) *Go kə̑̑ morə̑.*

1SG eat.1SG still

‘I am still eating / I haven’t eaten yet.’ (Nagaya2012)

(F.97) *Go kwukə̑̑ morə̑.*

1SG drunk still

‘I am still drunk (the speaker has a hangover) / I am not drunk yet (the speaker wants to drink more).’ (Nagaya2012)

F Papunesia

F.11 Ma Manda (skc, sauk1252)

F.11.1 -gût

F.11.1.1 General information

- Wordhood: a bound morpheme that attaches to roots of several syntactic classes. Pennington2016 describes it as a suffix; its low host sensitivity could be taken as an argument to consider it an enclitic.
- Syntax: attaches to its focus. With a predicate as the host, it function as a sentence adverb.

F.11.1.2 As a 'still' expression

- Pennington2016.
- Specialization: *-gût* is primarily a versatile restrictive marker. My assessment that the marker also serves as a specialized STILL expression is based on a combination of the discussion in Pennington2016 and examples like (F.98, F.99). For instance, in (F.98) the ascending slope is construed as continuing, as opposed to the protagonist's initial assumption that the mountain would plateau at cloud level. Further, indirect, evidence comes from the cross-linguistic robustness of restrictive-STILL polysemy and the semantic parallels between the two functions (Section 3.4.2).
- Pragmaticity: seems to be compatible with both scenarios.
- Polarity sensitivity: combination with negation yields NOT YET; *-gût* also forms part of the fixed expression *kogût* 'not yet'.
- Further note: exx. (F.100, F.101) superficially resemble the persistent time frame use (Section 2.5.2.2). However, in structural terms, these are most likely adverbial clauses (see Pennington2016 on non-verbal predication in Ma Manda). Ex. (F.102) illustrates the use in a hortative.

- (F.98) Context: the subject is going up a mountain. He thought that the peak coincided with the clouds and now he is moving beyond that point.

I kame mun kun aatâku-go-k-gût
this.ANAPH ground partial up.DIST remain-REM.PST-SUBJ.3SG-still

F.12 Mateq (xem, kemb1249)

Introductory remarks Mateq has two markers that qualify as candidates for STILL expressions: *mege* and *buyu*. For *mege*, only two tokens are found in Connell2013's (Connell2013) grammar. I therefore did not include it in my sample.

F.12.1 bayu

F.12.1.1 General information

- Wordhood: independent grammatical word, invariable.
- Syntax: fixed position, immediately before the predicate.

F.12.1.2 As a **STILL** expression (plus restrictive notions)

• Connell2013

- Specialization: inclusion is somewhat more tentative than that of most other expressions in the sample. Connell2013 describes *bayu* marker as denoting “a type of imperfective aspect”. Connell applies the same label to *mege* ‘still’ and *degeq* ‘constantly, keep Verb-ing’, which indicates that he uses *imperfective* as a synonym for continuity/persistence. As for the invocation of an alternative scenario, *bayu* not only implies discontinuation, but also a subsequent contingent development. This is particularly salient in (F.109, F.110) and distinguishes *bayu* from *mege*.

- Pragmaticity: the available data allow for no conclusion.
- Polarity sensitivity: inner negation yields NOT YET.

(F.109) *Bayu kurak~kurak tubiq.*
still bubble~REDUPL rice

‘The rice was [still] bubbling (implies an expectation that once the rice has bubbled it will be scooped out and eaten).’

(Connell2013)

(F.110) *Máteq tuet=n, okoq bayu man.*
soon first=ADV 1SG still eat
‘Just a moment, I’m still eating.’ (Connell2013)

(F.111) *Oya babu téq matéqéh bayu oji.*
mother mouse PROX just_before still go_to_forest
‘Mother Mouse was still out in the forest.’ (Connell2013)

F.12.1.3 Uses on the fringes of ‘still’

F.12.1.3.1 Scalar contexts

- Bayu* is compatible with scalar predicates. All attestations in the data feature limited increases. This includes two attestations involving an anterior viewpoint in combination with *sidah* ‘once’ (F.113, F.114). Note that Connell2013 translates (F.112) with the English present perfect, but the Mateq sentence features a nominal predicate.

F Papunesia

- Assuming that my general interpretation of *bayu* as a ‘still only’ expression is correct, these can be subsumed under the latter, more general function.

(F.112) *Bayu aroq=nq panèi nyidoq.*
still beginning=POSS.3 clever speak
'He'd only just begun to speak well (lit. it is still only his beginning ...).' (Connell2013)

(F.113) *Okoq bayu sidah=ng koq mamuh.*
1SG still once=ADV 1SG bathe
'I've only bathed once.' (Connell2013)

(F.114) *Okoq bayu sidah téq.*
1SG only once this
'I've never done this before (lit. I've only done this once, i.e. now).' (Connell2013)

F.13 Maybrat (ayz, maib1239)

Introductory remarks My understanding of the Maybrat data has greatly profited from discussion with Philomena Dol. Maybrat seems to have two STILL expressions: *fares* ‘still’ and *etu* ‘still be.’ Only *fares* is (close to) polyfunctional.

F.13.1 *fares*

F.13.1.1 General information

- Wordhood: free morpheme.
- Syntax: invariably in clause-final position.

F.13.1.2 As a ‘still’ expression

- Dol2007; additional discussion in vanBaar1997.
- Wordhood: free morpheme.
- Specialization: examples like (F.115–F.117), when taken together, give a reasonably good indication that *fares* conforms to my definition. For instance, in (F.115), the process of studying is construed as extending over time, and contrasted with its later discontinuation. *Fares* is also taken to be a genuine STILL expression by vanBaar1997.
- Pragmaticity: the data allow for no conclusion.
- Polarity sensitivity: inner negation yields NOT YET, outer negation NO LONGER.

F.14 *Paiwan (pwn, paiw1248)*

- Further note: *fares* often combines with *etu* ‘still be’, as in (F.117).

- (F.115) *Tuo sia t-ao iawai farkor fares.*
 1SG with 1SG-sibling;ss earlier study still
 ‘I with my brother, formerly we still studied.’ (Dol2007)
- (F.116) *Ku ro m-ait po-iit kiyam fares.*
 child REL 3.U-eat thing-eat.PL ill still
 ‘The child that eats food is still ill.’ (Dol2007)
- (F.117) *Paulince m-haf m-etu fares.*
 P. 3.U-pregnant 3.U-still_be still
 ‘Paulince is still pregnant.’ (Dol2007)

F.13.1.3 Broadly adverbial temporal-aspectual functions

F.13.1.3.1 Near past

- Dol2007.
- This function obtains in the fixed, and common, sequence *tna* ‘new, recently’ plus *fares*. That is, we are dealing with a transparent construction ‘[it is] still recent [that]’. This interpretation is in line with the fact that Maybrat does not make use of an overt copula (see Dol2007). To all appearances, this originally biclausal structure (‘*p*, it is still recent’) has undergone clause union.
- Note that Maybrat has neither grammatical tense nor aspect (see Dahl2011 for discussion). All three examples of *tna fares* in Dol2007’s grammar feature telic predicates (or telic construals) and a bounded viewpoint.

- (F.118) *M-ros tna fares.*
 3.U-stand recently still
 ‘She got up only recently.’ (Dol2007)
- (F.119) *M-ape m-aku tna fares.*
 3.U-give_birth 3.U-small recently still
 ‘She gave birth to small ones only recently.’ (Dol2007)

F.14 *Paiwan (pwn, paiw1248)*

Introductory remarks Apart from descriptive materials, I consulted EarlyWhitehorn2003’s (EarlyWhitehorn2003) text collection. I am furthermore indebted to Wei-chen Huang and Drungdrung a Tjakivusung for discussing Paiwan data with me.

F Papunesia

F.14.1 =anan

F.14.1.1 General information

- Wordhood: bound morpheme (enclitic).
- Syntax: attaches to the predicate.

F.14.1.2 As a ‘still’ expression

- Chang2006, EarlyWhitehorn2003, Egli1990 (Egli1990; Egli2002), Ferrell1982, Huang2012 and Wu2006.
- Specialization: textual examples like (F.120–F.122) give evidence that this item conforms to my definition. For instance, in (F.120) =anan signals that young deer continue to be considered “sprouts” (i.e. not game) for a certain amount of time, while at the same time evoking a prospective view towards the point at which this status is no longer upheld.
- Pragmaticity: judging from the texts in EarlyWhitehorn2003, =anan appears to be compatible with both scenarios; ex. (F.122) is a good candidate for the unexpectedly late scenario.
- Polarity sensitivity: inner negation yields NOT YET.
- Further note: ex. (F.123) illustrates the use in an imperative.

(F.120) Context: about young deer.

F.14.1.4 Broadly adverbial temporal-aspectual functions

F.14.1.4.1 Iterative (and continued iteration) and restitutive

- Chang2006 and Egli2002.
- Iterativity is illustrated in (F.129–F.131), restitution in (F.133, F.134).
- In these functions, =*anan* is repeatedly attested in combination with the additive/iterative marker *uta*. This collocation can indicate a continued iteration. Thus, in (F.131), it marks the third occurrence of the same situation. It can also give emphasis to the iteration or restored state (F.132).

- (F.129) Context: a child's grandmother has told him to go look at what they sawed, but nothing had sprouted yet. She has told him to be patient.

Tsua~tsuay anga a uta pa-gaṭu "sa-u ki-qenetj-i=anan,"

‘May our lives [still] be long, so that we’ll meet the teacher again, so that we can join in [again] working for God, is what we say in prayer to God.’ (EarlyWhitehorn2003)

F.14.1.4.2 First, for now

- Chang2006 and Egli1990.
- This reading might also be involved in the collocation *gatu=anan* ‘wait a bit’.
- For *nahan* in close-by Saisiyat, which has a very similar functional range to Paiwan =*anan* (Appendix F.16) Huang2008 stipulates that the ‘first’-function goes back to the additive usage in a discursive pattern similar to *omnisyndetic coordination* (i.e. both the clause describing an initial event and those describing subsequent events feature the marker in question). No such discourse pattern is, however, attested for Paiwan =*anan* in EarlyWhitehorn2003’s (EarlyWhitehorn2003) collection of one hundred texts. Also note that Huang2008’s (Huang2008) example includes a verb glossed as ‘do first’.

(F.135) Context: from the opening of a narrative. Once upon a time there were some girls and men weeding. They took it in turns to weed.

 ‘When they got to the roof, they [first] paused for instructions about the route. When their leader said: “Let’s go,” they all went below slowly.’

(EarlyWhitehorn2003)

F.14.1.4.3 Announcements

- There are numerous instances of =*anan* in EarlyWhitehorn2003’s (EarlyWhitehorn2003) text collection that involve the subject announcing what they are about to do what (F.138) or that it is another participant’s turn to do something (F.139).
- This cannot always be separated from the ‘first, for now use’ (Appendix F.14.1.4.2) that it is most likely be based on. For instance, ex. (F.140) can be read both as an announcement of the speaker’s plan, as well as a statement of what needs to be done before confronting the enemies.

- (F.138) Context: parents to one of their children.

(F.143) *Kan-u=anan pagatu.*

eat-IMP=still few

'Eat a little more.' (Ferrell1982, glosses added)

F.14.1.5.2 Comparisons of inequality

• Egli1990.

- Comparisons of inequality in Paiwan are formed via the prefix *tja-* 'more' on the predicate, with the standard of comparison –if present– marked for oblique case (see Egli1990; Ferrell1982; Huang2012).
- Addition of *=anan* yields 'even more'.

(F.144) *tja-pu-pitsur=anan*

more-have-strength=still

'Noch stärker.' [even stronger] (Egli1990, glosses added)

(F.145) Context: at a wedding dinner, a man has been eating a lot. His wife was ashamed of him and tied a string around your arm, telling him that he can only eat some more, once she tugs the string.

Nu tsuay anga ini tsidtsid-i. "Aku ini anga su

F Papunesia

a tussle; and so his arm got tugged. He went at the side dishes even more crazily.' (EarlyWhitehorn2003)

F.15 Rapanui (rap, rapa1244)

Introductory remarks My understanding of Rapanui is based mostly on Kieviet2017's (Kieviet2017) grammar, which is corpus-based and also incorporates findings from many preceding descriptions. Several of the examples below feature the "neutral aspect" marker *he*; see Kieviet2017 for a discussion of this item.

F.15.1 nō

F.15.1.1 General information

- Form: also transcribed as *no*.
- Wordhood: independent grammatical word, invariable.
- Syntax: mobile, typically following its associated constituent.

F.15.1.2 As a 'still' expression

- duFeu1996, Fuentes1960 and Kieviet2017.
- Specialization: the descriptions of *nō* clearly identify the concept of STILL as one of its functions; see especially Kieviet2017. Further, albeit indirect, evidence comes from the robustly attested restrictive-STILL polysemy and the semantic parallels between these functions (Section 3.4.2).
- Pragmaticity: compatible with both scenarios (Kieviet2017).
- Polarity sensitivity: not attested as a phasal polarity expression plus negation. This is in line with NOT YET being expressed by negation plus (*h*)ia 'yet' (Kieviet2017), and NO LONGER by negation plus *haka'ou* 'again' (Kieviet2017).
- Further note: Kieviet2017 observes that *nō* often features in texts as a cohesive device, indicating the continuity of a situation described earlier, and which serves as the background for an event; see (F.148).

(F.146) *E mata nō 'ana ho'i te miro era i hore mai era.*

 'Stealing the people's food was what she did all the time.'
 (Kieviet2017)

F Papunesia

F.15.1.4 Restrictive (non-temporal)

F.15.1.4.1 (Non-scalar) exclusive

- duFeu1996, Fuentes1960 and Kieviet2017.
- As with many exclusive markers, this is a cluster of related functions. These include restricting the reference of nominal constituents (F.152) and excluding alternative denotations for the predicate (F.153). Clearly derived is the use of *nō* to mark an act as performed "[w]ithout further ado, without thinking, without taking other considerations into account" (Kieviet2017); see (F.154).
- Restrictive *nō* also forms part of a construction *te* Noun *nō* 'ART Noun only' that invariably stands in sentence-initial position and introduces an exception to an (implicit or explicit) generalization; this is illustrated in (F.155). This construction, in turn, instantiates a pattern, by which

in initial subject NPs, *nō* indicates that the set referred to by the noun phrase has only one entity, viz. the one described in the rest of the sentence. The sentence can be paraphrased as: 'There is only one [NP], and that is [rest of sentence]' (Kieviet2017)

- (F.152) *'I te pō nō te ika nei ana hī.*
at ART night still ART fish PROX IRR fish

F.15 Rapanui (*rap, rapa1244*)

F.15.1.5 Broadly modal and interactional uses

F.15.1.5.1 Concessive protases

- duFeu1996, and Kieviet2017.
- This function obtains in the fixed expression *nōatu*, which could either be segmented as *nō* plus *atu* ‘away’ or be a loan from Tahitian (see Kieviet2017), plus nominalized verb.
- As (F.158) shows, this construction is not restricted to concessives.

(F.156) *Nōatu te pañaha'a, te mahana te mahane e hāpī ena i ira.*
 nevermind ART heavy ART day ART day IPPV teach DEM at *ira*.

ANAPH

boat.' (Kieviet2017)

F.16 Saisiyat (sais1237, xsy)

Introductory remarks My understanding of the Saisiyat data has greatly profited from discussion with Elizabeth Zeitoun and Lalo a tahesh kaybabaw. Saisiyat has two (candidates for) STILL expressions: *haisiya* and *nahan*. Only the latter displays polyfunctionality. Note that forward slashes in examples from Huang2007 (Huang2007, Huang2008) indicate intonation units.

F.16.1 *nahan*

F.16.1.0.1 General information

- Form: also transcribed as *naehan*, *naehaen*.
- Wordhood: independent grammatical word.
- Syntax: relatively mobile, but never occurs to the left of the predicate.

F.16.1.1 As a 'still' expression

- Huang2007 (Huang2007, Huang2008) and ZeitounEtal2015.

directional *atu*; see Kieviet2017.

- Specialization: there are few contextualized attestations of *nahan* as STILL in the references. However, examples like (F.163–F.165) and (F.166) below, when taken together, give a fairly strong indication that this marker conforms to my definition. For instance, in (F.163) *nahan* not only indicates that the child continues to be small, but it also evokes a prospective perspective towards a time when that is no longer the case and the child can be made swim.
- Pragmaticity: the data do not allow for conclusions.
- Polarity sensitivity: there are very few examples of phasal polarity *nahan* together with negation. The available examples (e.g. Huang2008; ZeitounEtal2015) indicate that this combination yields NOT YET. The latter concept is more commonly expressed by a separate item 'i'ini'. NO LONGER is marked by negation plus completive =ila.

(F.163) *Hini korkoring 'ol'ol'an naehan, 'izip pa-p-lalangoy!*
 this child small still NEG.LNK CAUS-DYNAMIC-swim
 'This child is still small, so don't make him swim!'

 'Lǎorén hái zài shùshàng zhai shǔiguò / The old man was still up in the tree to pick fruits.' (Huang2007, Huang2008)

F.16.1.2 Uses on the fringes of 'still'

F.16.1.2.1 Scalar contexts

- At minimum the tokattestationen in (F.166) involves a scalar context, in the form of a decrease over time.

F Papunesia

- (F.166) *Yako pash-raya' ka raromaeh, kita'-en 'akoy naehan. Rima' 1SG.NOM chop-above ACC bamboo see-PAT.FOC many still go pas-'izaeh-en naehan la'oz=ila kin-'oehoep make-again-PAT.FOC still enough=CMPL INTENS=dense*
'I chopped bamboo, but there was still a lot. I went to do it again, and it did not look so dense.' (ZeitounEtal2015)

F.16.1.3 Broadly adverbial temporal-aspectual functions

F.16.1.3.1 Iterative and Restitutive

- Huang2007 (Huang2007, Huang2008) and ZeitounEtal2015.
- According to Huang2007 (Huang2007, Huang2008) this use typically, but not exclusively, obtains with telic predicates and/or in combination with the completive marker =ila.
- Examples (F.167, F.168) illustrate iterative uses.
- Concerning restitutive uses, with most examples in question it is not entirely clear whether they have an iterative and/or restitutive reading. Huang2007 considers (F.169) to be iterative rather than restitutive, on the ground that "there is a felt discontinuous phase between the men's twice of being youth". However, this example features the restoration of an initial state (being young) that has been undone by a process to the opposite (growing old). The clearest case of restitution is found in (F.170).

- (F.167) *Yako ma-ngoip r<om>a'oe: ka 'io' naehan.*
1SG.NOM AGT.FOC-forget drink<AGT.FOC> ACC medicine still

F Papunesia

F.16.1.3.3 First, for now, for a while

- Huang2007 (Huang2007, Huang2008) and ZeitounEtal2015.
- Huang2008 stipulates that a reading of precedence goes back the additive (Appendix F.16.1.5.1) use of *nahan* (Appendix F.16.1.5.1) and a pattern akin to omnisyndetic coordination, as in (F.175). Note that this example also includes a verb 'do first'; furthermore, no such discourse pattern is attested in EarlyWhitehorn2003's (EarlyWhitehorn2003) extensive collections of texts in nearby Paiwan (F.14), where the same coexpression is found.

F.17 Ternate-Tidore (tft/tvo, tern1247/tido1248)

F.16.1.6 Broadly modal and interactional uses

F.16.1.6.1 Polite commands

- **Huang2008.**
- In directive speech acts, *nahan* can serve to contribute politeness.
- This can clearly be traced back to the ‘first, for now’ use (Appendix F.16.1.3.3). Huang2008 suggests that it relies on explicitly depicting the invitation or command as a prelude, thereby acknowledging that the addressee has other things to do.

(F.187) *Si’ael nahaen.*

eat.IMP still

‘Chi gè dongxi (zài zǒu) ba! / Come have a bite (before you leave)!’

(Huang2008)

F.17 Ternate-Tidore (tft/tvo, tern1247/tido1248)

Introductory remarks The data encompass Ternate (tft, tern1247) and Tidore (tvo, tido1248). These two are mutually intelligible and can arguably be considered as two dialects of one language (Voorhoeve1987, Voorhoeve1988). Judging from the data, the relevant expression (*moju*) has a similar, if not even identical, set of functions in the two varieties. Ternate-Tidore’s second STILL expression *masi*, a loan from Malay, is attested with only five tokens in the data consulted. Therefore I did not include it in my sample. Last, but far from least, I am indebted to Miriam van Staden for discussing some of the Ternate-Tidore data with me.

F.17.1 *moju*

F.17.1.1 General information

- Wordhood: free morpheme.
- Syntax: fixed position, following the predicate and its arguments.

F.17.1.2 As a ‘still’ expression

- Hayami2001, PikkertEtal1994 and vanStaden2000.
- Specialization: the descriptions, especially Hayami2001, clearly indicate that this item conforms to my definition. This also becomes evident in examples like (F.188–F.191). For instance, in (F.188), *moju* not only construes the husband’s absence as continuing, but also anticipate his later return.

F Papunesia

- Pragmaticity: the data allow for no conclusion.
- Polarity sensitivity: no attestations of *moju* plus negation in the data. NOT YET is expressed by a dedicated item, *hang*. NO LONGER is marked by *re(w)a*. *Moju* is, however, attested in combination with *hang* 'not yet'.
- Further notes: *moju* is commonly used in questions that follow a 'still or no longer' pattern, where it is also the only possible affirmative reply (F.191). *It-Moju* is furthermore occasionally attested in combination with the Malay loan *masi* 'still'.

(F.188) Context: a man's wife, an angelic creature, is returning to the heavens while her husband is at sea. When he returns, she is gone.

Ge~ge ma-raa Jafar Sadik=tai toma ngolo=tai

'The king said: "Ah, you managed this one [task], but this is not the only one, there is another on. I give you one more".' (vanStaden2000)

F.18 Western Dani (dnw, west2594)

Introductory remarks My understanding of Western Dani has greatly profited from discussion with Peter Barclay.

F.18.1 awo

F.18.1.1 General information

- Wordhood: independent grammatical word, invariable.
- Syntax: fixed, immediately preceding the predicate.

F.18.1.2 As a 'still' expression

- Barclay2008.

F.18 Western Dani (*dnw, west2594*)

- Specialization: that *awo* conforms to my definition is supported by examples like (F.197–F.199). For instance, (F.197) not only involves a seamless continuation of David's looks, but also evokes an alternative scenario, as Goliath expects to be confronted by an opponent of more mature appearance. Further, albeit indirect, evidence comes from *awo*'s uses as NOT YET in the absence of negation (Appendix F.18.1.3.1).
- Pragmaticity: hard to judge; most examples seem to involve the neutral scenario.
- Polarity sensitivity: inner negation (often via the negative “intentive mood”) yields NOT YET. This is also used as a signal of precedence.
- Further note: *awo* often features in cohesive clauses of the type ‘while still V-ing...’, as in (F.198, F.199); also see **Barclay2008**.

(F.197) Context: David faces the Philistine Goliath (1 Samuel 17)

F.18.1.3 Uses related to other phasal polarity concepts

F.18.1.3.1 Not yet

- Barclay2008.
- This function is found in two types of contexts, both lacking an overt predicate.
 - In a clause pattern featuring a nominal subject plus *awo*. This is rare, and only three examples are found in Barclay2008’s (Barclay2008) grammar: one with a plain noun in (F.200) and two with a complex noun phrase in (F.201, F.202). The latter instances both include the affirmative form of the “intentive mood”, a verbal paradigm “often used in contexts where the action has not yet occurred ... and when the course of action to be followed in certain circumstances is outlined” (Barclay2008) and which can be used in the formation of complex noun phrases (Barclay2008). The lack of an overt predicate is visible in the fact that *awo* in all other instances invariably precedes the predicate (i.e. in the case of atransitive predicates such as ‘it is still a river’ we would expect the inverse order *awo yi*). The examples suggest that the noun phrase must be associated with a characteristic periodic development (river > ‘swell’, harvest season > ‘come’, time > ‘come’).
 - As an interjection. This use carries additional pragmatic flavours: ‘wait’, ‘not now, maybe later’ (Peter Barclay, p.c.), as in (F.202).

(F.200) *Yi awo.*

river still

- (F.203) *Nin-ogoba* *awo!*
 POSS.1PL-father still
 ‘Our father, no!’ (Barclay2008)

F.18.1.4 Broadly adverbial temporal-aspectual functions

F.18.1.4.1 Near past

- Barclay2008.
 - This function is found combination with a past tense verb. The two examples in Barclay2008’s (Barclay2008) grammar both feature the intermediate past (F.204, F.205) and a perfective or anterior viewpoint. Judging from Barclay2008, the intermediate past is the least semantically specific of Western Dani’s three degrees of past remoteness in the past. As pointed out by Barclay2008 the immediate past and the near past use of *awo* overlap to some degree. The remote past is probably not compatible with a near past construal due to its “dissociated” (BotneKershner2008) nature. It is not entirely clear whether the intermediate past is inherently perfective; in any case, it stands in paradigmatic opposition to specifically continuous and habitual constructions.
 - The third example (F.206) features a minimally inflected medial clause in a clause chain, which receives its past interpretation from the final clause (cf. Barclay2008). The resulting reading is a near past-in-the-past. Judging from similar medial clauses throughout Barclay2008’s, it appears that the bounded viewpoint is an effect of the telic predicate (cf. the occurrence of *awo* with the atelic nominal predicate *tawe* ‘unmarried’, yielding STILL, one clause earlier).
 - According to Barclay2008. this function is also found with deverbal adjectives, which often have resultative readings (see Barclay2008). The only example I am aware of (F.207) can be interpreted as “plain” STILL with a nominal predicate modified by *ngget* ‘new’, i.e ‘still of the newborn kind’; cf. *nggweendo ngget mendek ogobakkigir-ik* ‘cart new kind made-ADJ’ ‘newly made cart’ (Barclay2008).

⁵ *Aa’nduk*, here glossed as ‘preceding’ is glossed varyingly as ‘first, before, ahead’ throughout Barclay2008’s (Barclay2008) grammar. Judging from the examples, it has a general meaning of precedence.

Appendix G: South America

G.1 Cavineña (cav, cavi1250)

Introductory remarks My understanding of the Cavineña data has profited greatly from discussion with Antoine Guillaume, who also helped with several glosses. Apart from descriptive materials, I consulted the text collections by CampLiccaldi1973 (CampLiccaldi1973, CampLiccaldi1989) and TaboMayo1977 (TaboMayo1977, TaboMayo1978).

G.1.1 =jari

G.1.1.1 General information

- Wordhood: bound morpheme (enclitic).
- Syntax: attaches to verbal predicates, copula complements and secondary predicates.
- Etymology: unknown, but strikingly similar to *jara* ‘lie (INTR)’.

G.1.1.2 As a ‘still’ expression

- CampLiccaldi1989 and Guillaume2008.
- Specialization: the description by Guillaume2008 meets my definition.
- Pragmaticity: compatible with both scenarios (tentative conclusion). Ex. (G.2) is a good candidate for the unexpectedly late scenario. It is unclear if the late scenario requires additional marking, e.g. emphatic *=di* and/or focus *=dyā*.
- Polarity sensitivity: inner negation yields NOT YET. This can be used in temporal clauses to signal precedence (CampLiccaldi1989).
- Further note: ex. (G.4) illustrates the use in a jussive context, which may alternatively be subsumed under the ‘first, for now’ use (Appendix G.1.1.4.1).

(G.1) *Tumepatya=tuna-ja=tu ani-kware=jari ududu ewikani=ju.*

G.1.1.4 Broadly adverbial temporal-aspectual functions**G.1.1.4.1 First, for now, for a while**

- Guillaume2008.
- A ‘for while, for now’ reading obtains in directive speech acts (G.6, G.7) and with future time settings, as in (G.8). It also obtains in performative ‘that’s all’ (G.9).

- (G.6) *Pisu-kwe=jari=shana juye=ekatse! Pa-kanajara ekatse!*
 untie-IMP.SG=still=PITY OX=DU JUSS-rest 3DU
 'Untie the oxen (DU) for a while, the poor animals (who are suffering
 so much pulling the cart)! Let them (DU) rest!' (Guillaume2008)

G.2 *Culina (cul, culi1244)*

- (G.7) *Aama! Radio=ju pa-kwa=jari!*
 NEG.EXIST radio=LOC HORT.SG-go=still
 'No (I can't come right now)! I'm going to the radio (house) for a while! (but don't worry, I'll come back later.)' (Guillaume2008)
- (G.8) *Tasi ju-ya=jari metajudya=ishu.*
 drive_taxi:1SG COP-IPFV=still tomorrow=PURP
 'I will drive my (motorcycle) taxi a little bit for (me to have money) tomorrow.' (Guillaume2008)
- (G.9) *Jadya=kamadya=jari!*
 thus=only=still
 'That's all for now! (but there will be another meeting or story)' (Guillaume2008; Antoine Guillaume, p.c.)

G.2 Culina (cul, culi1244)

Introductory remarks I am indebted to Jim and Cindy Boyer for discussing Culina data with me, and to Stefan Dienst for helping with glosses. Apart from descriptive materials, I searched Boyer1990's (Boyer1990, Boyer2001) and Boyer1999 (Boyer1999)'s text collections. Culina appears to have two STILL expressions: *paha/pahi* (only in the Juruá variety?) and *-kha*. Only for the latter do the data indicate additional functions. Lastly, note that Tiss2004 describes the verb suffixes *-i/-ni* as imperfective, whereas Dienst2014 treats them as declarative markers. In the glosses, I follow Dienst2014's (Dienst2014) analysis.

G.2.1 -kha

G.2.1.1 General information

- Form: also transcribed as *-kka* and *-cca*.
- Wordhood: bound morpheme (verb suffix).

G.2.1.2 As a 'still|rq expression

- Boyer2020, Dienst2014 and Tiss2004.
- Specialization: the descriptions of this marker, especially Tiss2004 show that it conforms to my definition (see Appendix G.2.1.3.1 below for further discussion). This is reflected in examples like (G.10–G.12). For instance, in (G.10) *-kha* (transcribed as *-cca*), to all appearances, not only construes the use of earthen pots and shells as a continuation of a prior habit, but also points to its later

G South America

discontinuation. According to Tiss2004, *-kha* not only marks persistance and evokes a possible discontinuation scenario, but the latter tends to be represented by a follow-up situation “antes de algo novo acontecer, a situação em questão ainda continua por um período limitado” [before something else happens, the situation in question still continues for a limited time] (Tiss2004). This is reminiscent of the ‘still only’ meaning of Mate *bayu* (Appendix F.12.1.2)

- Pragmaticity: the data allow for no conclusions.
- Polarity sensitivity: inner negation yields NOT YET
- Further note: *-kha* can be combined with another STILL expression *paha/pahi*.

- (G.10) Context: the opening of a short expository text about food preparation.

Maittaccadsama madija idi-deni=pa *po-cca-deni*

G.2.1.3 Broadly adverbial temporal-aspectual functions

G.2.1.3.1 First, for now, for a while

- Tiss2004 and MonserratSilva1986.
- As Tiss2004 discusses, without *-kha* (G.14) would be understood as involving a permanent transfer of possession.
- A token like (G.16) is hard to judge: there are no contextual indications that persistence play a role in (G.14) is due to *da* 'give' plus *-kha* marking the transfer in possession as temporary. the use of *iquejenaccade*, nor is there an established past topic time. It thus seems that *-kha* (i.e. <*cca*>) serves to highlight the polarity contrast and mark precedence ('we used to live here back then/for a while then, but no longer do').

- (G.13) Context: after a hunting trip, a father and his child have reached their home estate.

G South America

G.3 Huallaga Huánuco Quechua (qub, hual1241)

G.3.1 -raq

G.3.1.1 General information

- Form: also transcribed as *-raj* and as *-rä* (with the diaeresis signalling vowel length), the latter occurring in contexts that trigger ellision of the coda segment. In addition, there is a free variant *-ran*, usually via assimilation from a preceding suffix ending in /n/ .
- Wordhood: a bound morpheme that can occur on various parts of speech.
- Syntax: *-raq* attaches to its associate; in its function as a phasal polarity marker the host is typically the main predicate.
- Etymology: unclear, but **vanBaar1997** suggests ‘for now, first’ (Appendix G.3.1.4.1) as the original function.

G.3.1.2 As a ‘still|rq expression

- **Weber1989** and **WeberEtAl2008**.
- Specialization: **Weber1989**’s description, especially (**Weber1989**) meets my definition. **Weber1989** furthermore notes the incompatibility with inalterable states. Its specialization also becomes evident in prototypical contexts like (G.17, G.18).
- Pragmaticity: appears to be compatible with both scenarios.
- Polarity sensitivity: inner negation yields NOT YET. In temporal clauses, this commonly serves as a signal of precedence.
- Further note: ex. (G.20) illustrates the use in a hortative; this could alternatively be subsumed under the ‘first, for now’ use (Appendix G.3.1.4.1).

- (G.17) *Gam-pa wamra-yque-ga tacsha-lla-rä-mi. Noga-pa-ga jatu-n-na.*

G South America

G.3.1.4 Broadly adverbial temporal-aspectual functions

G.3.1.4.1 First, for now

- **Weber1989.**
- **vanBaar1997**, based on descriptions of several Quechuan languages, suggests that this is the diachronically original meaning of *-raq*. This would also provide a direct bridge to the temporal restrictive function (Appendix G.3.1.5.1).

- (G.24) *Ese nuwal-wan tiñi-rku-r atapa-nchi:-raq.*
that walnut-COM dye-then-ADV form_skein-1PL.INCL-still

we can go back to doing it).' (Weber1989)

G.3.1.5 Temporal connectives and frame setters

G.3.1.5.1 Temporal restrictive

- **Weber1989.**
- In this function, the focus of *-raq* can be an adverbial (G.27, G.28) or a temporal clause in the same function (G.29, G.30).
- This uses also underlies several fixed expressions, including (Weber1989):
 - *Qepa-n-ta-raq* 'back-POSS.3-ADV-still' > 'later on'
 - *Naka-y-raq* 'take_long_time-INF-ADV-still' > 'yet a while later'
 - *Chay-chaw-raq* 'that-LOC-still' > 'not until that point in time'
 - *Chay-raq-shi* 'that-still-EVID' > 'right then, it was not until then'
 - *Chay-lla-raq* 'that-only-still' > 'momentarily, very recently'
- Note that *chay-raq-shi* 'that-still-EVID' 'right then, it was not until then' in (G.31) can be understood as 'finally', thus bleeding into **ALREADY**-territory.

- (G.27) *Ishkay killa-raq haru-shka:*
two month-still step-ANT.1
'It was two months before I stepped on it (a disjointed ankle).' (Weber1989)

 'The two of them are together (the old man's wife and her lover). At
 that, the old man becomes angry, but just inside. Finally, only then,
 did the old man become angry. '(Weber1989)

G.3.1.6 Restrictive (non-temporal)

G.3.1.6.1 Scalar restrictive

- Weber1989.
- In this function *-raq* indicates that situation in question "was an extreme measure, i.e., not carried out to an ordinary degree or applied to the ordinary objects" (Weber1989). That is, the negated context propositions are all lower-ranking (lower degrees, etc.).
- Cases like (G.34, G.35) appear to constitute a bridge between this function and the 'not until' function (Appendix G.3.1.5.1): they involve both time spans (waiting for the decision, possibly preceded by consulting with lower authorities / working for a considerable amount of time) as well as degrees (the highest authority, working to such a degree that it induces suffering).

¹See Weber1989 on the object suffix *-ta* as a marker of time elapsing.

G.3.1.7 Broadly modal and interactional uses

G.3.1.7.1 Concessive(-like) apodoses

- Weber1989.
- With first person subjects plus the future tense *-raq* serves to indicate that the speaker maintains a certain plan. This often goes together with a concessive notion that the plan persists in spite of what the addressee may assume.

- (G.36) *Ura-shaq-raq.*
 do-FUT.1-still
 'I will yet do it / I still intend to do it (despite your thinking that I

G.3 *Huallaga Huánuco Quechua (qub, hual1241)*

won't).’ (Weber1989)

 perhaps-TOP field:POSS.1-OBJ-still finish-REFL-FUT.1
 ‘Perhaps I will finish (plowing) my field (before you take one of my oxen).’ (Weber1989)

G.3.1.7.2 Dubitative: *-chu-raq*

- Weber1989.
- Form: this function obtains in combination with the question marker *-chu*.
- In this use, *-chu-raq* serves to express doubt about the host constituent.
- The relation to other uses of *-raq* remains unclear; it might be motivated by cases like (G.33) above.

- (G.38) *Qam-pa surti-ki noqa-pa surti:-naw-chu-raq o mas*
 2-GEN fate-POSS.2 1-GEN fate:POSS.1-like-Q-still or more
piyur-chu-raq.

 now day rain-FUT.3-Q-still
 ‘Will it perhaps rain today?’ (Weber1989)

G.3.1.7.3 Rhetorical question, despair: *kanan-raq-chi kannan-lla-qa*

- Weber1989.
- Form: this function obtains in a fixed construction *kanan-raq-chi kannan-lla-qa* ‘now-still-EVID now-only-TOP ‘Oh dear, what now!’.
- This use might be related to the scalar restrictive function (G.3.1.6.1).

- (G.40) *Kanan-raq-chi kannan-lla-qa ima-ta-raq ni-man-qa duyñu-n?*
 now-still-EVID now-only-TOP what-OBJ-Q say-1>3-TOP owner-3
 ‘Oh dear! What now! What will its owner say to me?’
 (Weber1989)

G.3.1.7.4 *chay-raq N-lla-qa*: ‘it sure is N!’

- Discussed by Weber1989.
- Form: this function obtains in an construction *chay-raq N-lla-qa* ‘that-still N-only-TOP’ where N may be a nominalized verb.
- Weber1989 translates this as ‘it sure is ... !’.

G South America

- This use is probably be related to the scalar restrictive function (Appendix G.3.1.6.1).

(G.41) *Chay-raq aka-y-lla-q.*
 that-still be_hot-INF-only-TOP
 'It sure is hot!' (Weber1989)

G.4 Movima (mzp, movi1243)

Introductory remarks I am indebted to Katharina Haude, for sharing unpublished Movima data with me, for lengthy discussions of them, and for helping with many tricky glosses. In addition to descriptive materials, I consulted Haude's unpublished corpus (**MovimaCorpus**).

G.4.1 di:ra(n)

G.4.1.1 General information

- Form: free variation between *di:ran* and *di:ra*.
- Wordhood: free morpheme.
- Syntax: relatively mobile, but typically occurring before the predicate.

G.4.1.2 As a 'still|rq expression

- Haude2006 and Judy1962.
- Specialization: examples like (G.42–G.44) give evidence that this adverb conforms to my definition. For instance in (G.42) the mother's hearing abilities are both linked to a prior state and contrasted with the opposite situation at a later time.
- Pragmaticity: compatible with both scenarios. Whether the unexpectedly late scenario requires additional marking is to be determined in future research.
- Polarity sensitivity: inner negation yields NOT YET.

(G.42) Context: recollecting a conversation between the narrator's mother and grandfather.
N-asko dira pawanet-wa='ne kaj siňlototo='ne mere'.

still PROX.N NEG bull-NMLZ.N still PROX.N small
 'This one isn't a bull yet, it's still small.' (**Haude2006**)

G.4.1.3 Restrictive (non-temporal)

G.4.1.3.1 Scalar restrictive 'at least'

- **Haude2006**.

- In this function *dira:(n)* signals a non-maximal value on a scale of subjective evaluation, i.e. it involves negated universal quantification, comparable to English evaluative *at least* (see **Kay1992**; **Gast2012**). For example, in (G.45) it conveys a positive evaluation of the fact that the deceased received a Christian funeral. While more desirable alternatives are available in the common ground (e.g. a less gruesome death), there is also at minimum one less preferable one (no dignified burial). Ex. (G.48) shows that this reading survives under negation.
- In (G.49) the context plus the combination with the **ALREADY**-marker *jayna* gives rise to a temporal restrictive reading ('no earlier than that, then at least/at last').

- (G.45) Context: a woman who had the magic power of transforming into a jaguar has been caught and her jaguar hide has been burned, leading to her gruesome death.

G.5 Southern Lengua (enx, sout2989)

Introductory remarks I am indebted to John Elliot for sharing and discussing Southern Lengua (a.k.a Enxet Sur) data with me, and for helping with tricky glosses.

G.5.1 makham**G.5.1.1 General information**

- Wordhood: free morpheme.

G.5 *Southern Lengua (enx, sout2989)*

G.5.1.2 As a 'still|rq expression

- **Elliot2021.**
- Specialization: examples like (G.50–G.52) give a fairly good indication that this marker conforms to my definition. For instance, in (G.50) *makham* not only signals that the men were young, but it also highlights that they were not yet grown-up (i.e. no longer youth).
- Pragmaticity: compatible with both scenarios (tentative conclusion); it is unclear if the unexpectedly late scenario receives additional marking.
- Polarity sensitivity: inner negation yields NOT YET.
- Syntax: fixed position, following the predicate, preceding dependent nominals.
- Further note: ex. (G.53) illustrates an instance that borders on a 'same' use.

- (G.50) Context: about Enxet youths taken during war to do labour for the Paraguayan military.

‘We still see a little water here.’

(Elliot2021 and John Elliot, p.c.)

G.5.1.4 Broadly adverbial temporal and aspectual functions

G.5.1.4.1 Iterative and restitutive

- Elliot2021.
- Examples (G.56–G.58) illustrate iterative uses. Restitutive ones are illustrated in (G.60–G.62).
- Both uses are often, but not always, accompanied by the iterative/restitutive verb suffix *-akx* (termed “duplicative” in Elliot2021), e.g. in (G.58, G.62).
- An example like (G.59) can be understood as lying at the intersection of iterativity and additivity: as there is no indexation of the p-argument, *apchaqha* kill can be interpreted as either intransitive (‘he killed again’) or as involving an implied indefinite patient argument (‘he killed another one’) (John Elliot, p.c.).
- Syntax: fixed, post-predicate position.

- (G.56) Context: a preacher speaking, at the beginning of a sermon.

Bueno, keso axto'o=naj=se'e nél-wet-axk-o

good this morning=EVID=PROX 1PL:DIST-see-MID-NMLZ.IPFV

G.6 Trió (tri, trio1238)

Introductory remarks My understanding of Trió has greatly profited from discussion with Sérgio Meira, who also shared unpublished data with me.

G.6.1 =nkérë

G.6.1.1 General information

- Form: transcribed as *nkörö* in **Letschert1998**.
- Wordhood: bound morpheme, an enclitic that takes constituents of various syntactic classes as its host.
- Syntax: =*nkérë* attaches to its focus; with the main predicate as its host, it serves as a sentence adverb.

G.6.1.2 As a ‘still|rq expression

- **Carlin2004, Letschert1998 and Meira1999.**
- Specialization: the descriptions by **Carlin2004** and **Meira1999**, when taken together, clearly identify this marker as STILL expression. The description by **Carlin2004** includes the notion of an alternative scenario (but see below on

G.6 *Trió (tri, trio1238)*

the question of pragmaticity). This is corroborated by the fact that in order for nouns to host phasal polarity *=nkérë*, they need to first be augmented by the “attributivizer” (Meira1999) or “facsimile” (Carlin2004) suffix *-me*, which denotes a manifest, but not intrinsic quality, typically a transient state (Carlin2004). What is more, when a state construed via Noun-*me* is described from the perspective of a later point in time, where the state no longer holds, use of *=nkérë* is compulsory (Carlin2004).

- Pragmaticity: Carlin2004 describes *=nkérë* as counter-expectational. This is, however, hard to conciliate with examples like (G.70) and, more generally, the obligatoriness of *=nkérë* with past transient states like childhood. Example (G.72) suggests that an unexpected late scenario is construed by additional use of a counter-expectational clitic (see Meira1999 and Carlin2004 on the latter).
- Polarity sensitivity: inner negation yields NOT YET. In temporal clauses, this is the default way of signalling precedence (Carlin2004).
- Syntax: as a STILL expression, *=nkérë* attaches to the main predicate.

- (G.70) Context: from the opening of an autobiographical narrative.

Pena pijukuku=me=nkérë ahtao, susu=pë, manko

 ‘“I thought you were dead (lit. I thought your not being), but you turn out to be still there (= alive)!” (she) said.’ (Sérgio Meira, p.c.)

G South America

G.6.1.3 Uses on the fringes of ‘still’

G.6.1.3.1 Continued iteration (and continued restitutive)

- Meira1999
- This function obtains in combination with the “repetition” (Meira1999) or “cyclical” (Carlin2004) marker *=pa*. Often, these two clitics occur on the same host, hence *=nkérë=pa*, as in (G.73). This is, however, not always the case, as *=pa* gravitates toward sentence-initial elements (Meira1999; Carlin2004), as in (G.74, G.75).
- This function covers both continued iteration *sensu stricto* (G.73, G.74), as well as continued restitutions (G.75).

(G.73) *Eeke mi-ponopii-je=nkérë=pa?*
 how 2A-tell-MOD=still-ITER
 ‘How could you tell this again?’ (Meira1999)⁴

(G.74) *Tëin=ken=pa kaikui t-ëpoo-se wítoto=ja=nkérë.*
 once=CONT=ITER jaguar REM.PST-meet-REM.PST person=AGT=still
 ‘The person met Jaguar still once more (i.e. after several previous
 meetings).’ (Meira1999)

(G.75) *Irë=mao=pa tii-w-ëe-se=nkérë irënehka*
 3.ANAPH=then=ITER REM.PST-SUBJ-come-REM.PST=still at_last
wii t-ënee-se ii-ja.
 cassava REM.PST-bring-REM.PST 3-AGT
 ‘Then he came back [once again]; at last, he had brought cassava.’
 (Meira1999; Sérgio Meira, p.c.)

G.6.1.4 Marginality

- I have only two examples of this use.
- Syntax: as with *=nkérë* as STILL, in this function it attaches to the predicate.

(G.76) *Kure=nkérë.*
 good=still
 ‘Good enough’ (i.e. could be better, but is still good) (Sérgio Meira,
 p.c.)

⁴-*je*, here for the sake of simplicity glosses as MOD ‘modal’ is a type of mirative marker, indicating surprise and disbelief (Carlin2004; Meira1999). In this instance, it serves to contribute a negative evaluation of the addressee’s repeated retelling (Sérgio Meira, p.c.).

G.6 *Trió (tri, trio1238)*

- (G.77) Context: about a fish the protagonist of the story has caught.

Akii=hpe eka, eka, nérë, pejo-pisi
 what=INDEF POSS.3:name POSS.3:name 3.ANAPH fish_sp-DIM
apo=pohpa mono=nkérë, arawe apo.
 like=EMPH big_one=still cockroach_sp like
 ‘What’s-it-called, its name, its name, that one just like a little *pejo* fish,
 fish, a little big, like a (big) cockroach.’ (i.e. it still counts as big,
 despite being similar to a small *pejo* fish) (Sérgio Meira, p.c.)

G.6.1.5 Additive and related uses

G.6.1.5.1 Additive

- Carlin2004 and Meira1999.
- Sometimes the host of =*nkérë* as ‘also, too’ is the clausal connective *se(h)ke(n)* ‘also, likewise’. This collocation seems to stress the notions of continuity and parallelism (G.82).

- (G.78) Context: at a store.

Téérë=nkérë ...?
 EXIST=still
 ‘Do you also have ... (i.e. in addition to what I’ve already bought)?’
 (Sérgio Meira, p.c.)

- (G.79) *A-tii=nkérë-hpe m-ene?*

Q-INANIMATE=still=INDEF 2>3-see:IMM.PST
 ‘What on earth else did you see?’ (Carlin2004)

G.7 Xavánte (xav, xava1240)

G.7.1 (za)hadu

G.7.1.1 General information

- Form: free variation *zahadu* ~ *hodu*.
- Wordhood: free morpheme.
- Syntax: fixed, preceding the predicate.

G.7.1.2 As a ‘still|rq expression

- Lachnitt1987 (Lachnitt1987, Lachnitt1988), Estevam2011 and McLeod2004.
- Specialization: examples like (G.83, G.84), which involve a contrast with a later point in time, give a fairly good indication that the marker conforms to my definition; additional, albeit indirect evidence, comes from its function as NOT YET (Appendix G.7.1.3.1).
- Polarity sensitivity: inner negation yields NOT YET.
- Pragmaticity: the data allow for no conclusions.

- (G.83) *Āhā wede hā awaɻawi zahadu te za, taza hā*
